CHAPTER 1

GENERAL CONSIDERATIONS AND TEACHING APPROACH

1. Graduate medical curriculum is oriented towards training students to undertake the responsibilities of a physician of first contact who is capable of looking after the preventive, promotive, curative & rehabilitative aspect of medicine.

2. With wide range of career opportunities available today, a graduate has a wide choice of career opportunities. The training, though broad based and flexible should aim to provide an educational experience of the essentials required for health care in our country. Training should be able to meet internationally acceptable standards.

3. To undertake the responsibilities of service situations which is a changing condition and of various types, it is essential to provide adequate placement training tailored to the needs of such services as to enable the graduates to become effective instruments of implementation of those requirements. To avail of opportunities and be able to conduct professional requirements, the graduate shall endeavour to have acquired basic training in different aspects of medical care.

4. The importance of the community aspects of health care and of rural health care services is to be recognized. This aspect of education & training of graduates should be adequately recognized in the prescribed curriculum. Its importance has been systematically upgraded over the past years and adequate exposure to such experiences should be available throughout all the three phases of education & training. This has to be further emphasized and intensified by providing exposure to field practice areas and training during the internship period. The aim of the period of rural training during internship is to enable the fresh graduates to function efficiently under such settings.

5. The educational experience should emphasize health and community orientation instead of only disease and hospital orientation or being concentrated on curative aspects. As such all the basic concepts of modern scientific medical education are to be adequately dealt with.

6. There must be enough experiences to be provided for self learning. The methods and techniques that would ensure this must become a part of teaching learning process.

7. The medical graduate of modern scientific medicine shall endeavour to become capable of functioning independently in both urban or rural environment. He/she shall endeavour to give emphasis on fundamental aspects of the subjects taught and on common problems of health and disease avoiding unnecessary details of specialization.

8. The importance of social factors in relation to the problem of health and diseases should receive proper emphasis throughout the course and to achieve this purpose, the educational process should also be community based than only hospital based. The importance of population control and family welfare planning should be emphasized throughout the period of training with the importance of health and development duly emphasized.

9. Adequate emphasis is to be placed on cultivating logical and scientific habits of thought, clarity of expression and independence of judgment, ability to collect and analyse information and to correlate them.

10. The educational process should be placed in a historic background as an evolving process and not merely as an acquisition of a large number of disjointed facts without a proper perspective. The history of Medicine with reference to the evolution of medical knowledge both in this country and the rest of the world should form a part of this process.
11. Lectures alone are generally not adequate as a method of training and are a poor means of transferring/acquiring information and even less effective at skill development and in generating the appropriate attitudes. Every effort should be made to encourage the use of active methods related to demonstration and on first-hand experience. Students will be encouraged to learn in small groups, through peer interactions so as to gain maximal experience through contacts with patients and the communities in which they live. While the curriculum objectives often refer to areas of knowledge or science, they are best taught in a setting of clinical relevance and hands-on experience for students who assimilate and make this knowledge a part of their own working skills.

12. The graduate medical education in clinical subjects should be based primarily on out-patient teaching, emergency departments and within the community including peripheral health care institutions. The out-patient departments should be suitably planned to provide training to graduates in small groups.

13. Clinics should be organised in small groups of preferably not more than 10 students so that a teacher can give personal attention to each student with a view to improve his skill and competence in handling of the patients.

14. Proper records of the work should be maintained which will form the basis for the students' internal assessment and should be available to the inspectors at the time of inspection of the college by the Medical Council of India.

15. Maximal efforts have to be made to encourage integrated teaching between traditional subject areas using a problem-based learning approach starting with clinical or community cases and exploring the relevance of various preclinical disciplines in both understanding and resolution of the problem. Every attempt be made to de-emphasize compartmentalisation of disciplines so as to achieve both horizontal and vertical integration in different phases.

16. Every attempt is to be made to encourage students to participate in group discussions and seminars to enable them to develop personality, character, expression and other faculties which are necessary for a medical graduate to function either in solo practice or as a team leader when he begins his independent career. A discussion group should not have more than 20 students.

17. Faculty member should avail of modern educational technology while teaching the students and to attain this objective, Medical Education Units/Departments be established in all medical colleges for faculty development and providing learning resource material to teachers.

18. To derive maximum advantage out of this revised curriculum, the vacation period to students in one calendar year should not exceed one month, during the 4 ½ years Bachelor of Medicine and Bachelor of Surgery (MBBS) Course.

19. In order to implement the revised curriculum in toto, State Govts. and Institution Bodies must ensure that adequate financial and technical inputs are provided.

20. History of Medicine - The students will be given an outline on “History of Medicine”. This will be taught in an integrated manner by subject specialists and will be coordinated by the Medical Education Unit of the College.

21. All medical institutions should have curriculum committee which would plan curricula and instructional method which will be regularly updated.
22. Integration of ICT in learning process will be implemented.

OBJECTIVE OF MEDICAL GRADUATE TRAINING PROGRAMME

1. NATIONAL GOALS:

At the end of undergraduate program, the medical student should be able to:

(a) recognize “health for all” as a national goal and health right of all citizens and by undergoing training for medical profession fulfill his/her social obligations towards realization of this goal.

(b) learn every aspect of National policies on health and devote himself / herself to its practical implementation.

(c) achieve competence in practice of holistic medicine, encompassing promotive, preventive, curative and rehabilitative aspects of common diseases.

(d) develop scientific temper, acquire educational experience for proficiency in profession and promote healthy living.

(e) become exemplary citizen by observation of medical ethics and fulfilling social and professional obligations, so as to respond to national aspirations.

2. INSTITUTIONAL GOALS:

(I) In consonance with the national goals each medical institution should evolve institutional goals to define the kind of trained manpower (or professionals) they intend to produce. The undergraduate students coming out of a medical institute should:

(a) be competent in diagnosis and management of common health problems of the individual and the community, commensurate with his/her position as a member of the health team at the primary, secondary or tertiary levels, using his/her clinical skills based on history, physical examination and relevant investigations.

(b) be competent to practice preventive, promotive, curative and rehabilitative medicine in respect to the commonly encountered health problems.

(c) appreciate rationale for different therapeutic modalities, be familiar with the administration of the “essential drugs” and their common side effects.

(d) be able to appreciate the socio-psychological, cultural, economic and environmental factors affecting health and develop humane attitude towards the patients in discharging one’s professional responsibilities.

(e) possess the attitude for continued self learning and to seek further expertise or to pursue research in any chosen area of medicine, action research and documentation skills.

(f) be familiar with the basic factors which are essential for the implementation of the National Health Programmes including practical aspects of the following:

(i) Family Welfare and Maternal and Child Health(MCH)
(ii) Sanitation and water supply
(iii) Prevention and control of communicable and non-communicable diseases
(iv) Immunization  
(v) Health Education  
(vi) IPHS standard of health at various level of service delivery, medical waste disposal.  
(vii) Organizational institutional arrangements.

(g) acquire basic management skills in the area of human resources, materials and resource management related to health care delivery, General and hospital management, principal inventory skills and counselling.

(h) be able to identify community health problems and learn to work to resolve these by designing, instituting corrective steps and evaluating outcome of such measures.

(i) be able to work as a leading partner in health care teams and acquire proficiency in communication skills.

(j) be competent to work in a variety of health care settings.

(k) have personal characteristics and attitudes required for professional life such as personal integrity, sense of responsibility and dependability and ability to relate to or show concern for other individuals.

(II) All efforts must be made to equip the medical graduate to acquire the skills as detailed in **APPENDIX A.**
CHAPTER II

ADMISSION, SELECTION, COUNSELING, MIGRATION & TRAINING

4. Admission to the Medical Course - Eligibility Criteria: No Candidate shall be allowed to be admitted to the Medical Curriculum proper of first Bachelor of Medicine and Bachelor of Surgery (MBBS) Course until:

1. He/she shall complete the age of 17 years on or before 31st December of the year of admission to the MBBS Course.

2. In order to be eligible to take National Eligibility-cum-Entrance Test, he/she should have passed at first attempt the qualifying examination as under:

   (a) The higher secondary examination or the Indian School Certificate Examination which is equivalent to 10+2 Higher Secondary examination after a period of 12 years study, the last two years of study comprising of Physics, Chemistry, Biology/Bio-technology and Mathematics or any other elective subjects with English at a level not less than core course of English as prescribed by the National Council of Educational Research and Training after the introduction of the 10+2+3 years educational structure as recommended by the National Committee on education;

   Note: Where the course content is not as prescribed for 10+2 education structure of the National Committee, the candidates will have to undergo a period of one year pre-professional training before admission to the Medical colleges;

   Or

   (b) The intermediate examination in science of an Indian University/Board or other recognised examining body with Physics, Chemistry and Biology/Bio-technology which shall include a practical test in these subjects and also English as a compulsory subject;

   Or

   (c) The pre-professional/pre-medical examination with Physics, Chemistry and Biology/Bio-technology, after passing either the higher secondary school examination, or the pre-university or an equivalent Examination. The pre-professional / pre-medical examination shall include a practical test in Physics, Chemistry and Biology / Bio-technology and also English as a compulsory subject;

   Or

   (d) The first year of the three years degree course of a recognized university, with Physics, chemistry and Biology / Bio-technology including a practical test in three subjects provided the examination is a "University Examination" and candidate has passed 10+2 with English at a level not less than a core course;

   Or

   (e) B.Sc. examination of an Indian University, provided that he / she has passed the B.Sc. examination with not less than two of the following subjects Physics, Chemistry, Biology (Botany, Zoology)/Bio-technology and further that he/she has passed the earlier qualifying examination with the following subjects - Physics, Chemistry, Biology and English.

   Or
(f) Any other examination which, in scope and standard is found to be equivalent to the intermediate science examination of an Indian University/Board, taking Physics, Chemistry and Biology/Bio-technology including practical test in each of these subjects and English.

**Note:** The pre-medical course may be conducted either at Medical College, or a science College. After the 10+2 course is introduced, the integrated courses should be abolished.

3. Three percent (3%) seats of the annual sanctioned intake capacity shall be filled up by candidates with locomotory disability of lower limbs between 50% and 70%. Provided that in case any seat in this 3% quota remains unfilled on account of unavailability of candidates with locomotory disability of lower limbs between 50% to 70% then any such unfilled seat in this 3% quota shall be filled up by persons with locomotory disability of lower limbs between 40% and 50% - before they are included in the annual sanctioned seats for General Category candidates. Provided further that this entire exercise shall be completed by each medical college / institution as per the statutory time schedule for admissions and in no case any admission will be made in the MBBS course after 30th of September.

4. The percentage of NRI students to be admitted shall not exceed 15% of the total intake. The guidelines to be followed for eligibility for NRI admission are as follows:

Candidates should fulfil the minimum eligibility criteria to seek admission under Non Resident Indians (NRI) Category. The seats under NRI quota should be utilized by the children or wards of Bonafide NRI’s only. It may be noted that the admission procedure, application form and fees are different from the domestic students.

1. As per the GO(MS)No.243/2014/H&FWD dated 6-8-2014 “An Applicant who depends upon his/her Father/Mother / Brothers/Sisters (inclusive of first cousins) / Husband/Wife / Brothers and Sisters (inclusive of first cousins) of Father or Mother / Half Brother/Half Sister / Adopted Father or Adopted Mother or guardian (declared as the guardian of the candidate by the court as per provisions in “The Guardian and Wards Act, 1890,”) who is working abroad, will only be eligible to apply in the NRI category seats. Further, the Candidate should be of Indian origin settled in Foreign (OR) Candidate born in a foreign country and whose parents are of Indian Origin (OR) Child of Indian Citizen staying abroad on employment or business (OR) Child of Indian citizen deputed abroad by Public Sector Undertaking (OR) Child of the Official of the Central / State Government on deputation abroad shall fall under the NRI category. This is subject to further orders, if any, from Government, regarding the matter.

2. The candidate himself/herself should produce the proof for NRI/ Overseas Citizenship India (OCI) or Person of Indian Origin (PIO) or child of NRI/OCI/PIO with current year NRI certificate issued from the Indian embassy of concerned country along with valid passport and visa copies.

3. The candidate should have completed 17 years of age on or before 31st December of the year of admission.

4. Candidate seeking admission to MBBS course under NRI Quota should have, at first attempt, passed H.Sc, Examination (10+2 pattern / equivalent) and must have taken courses in Biology, Physics and Chemistry. English should be one of the subjects in the qualifying examination. And obtained minimum of marks at 50th percentile in ‘National Eligibility-cum-Entrance Test to MBBS course’ held for the said academic year.

5. The candidate should have obtained a minimum of 50% marks in Biology or Botany and Zoology taken together and a minimum of 50% marks each in Physics and Chemistry. Admissions are done on the basis of marks obtained in the qualifying examination. Wherever grades like A, B-, C+, etc. are used by the issuing school, appropriate equivalence in terms of percentage like 90%, 75% and 60% should be made available. Rounding off of the percentage of marks to the nearest whole number is not permitted.
6. Candidates with foreign qualifications will have to obtain the ‘Equivalence Certificate’ from Association of Indian Universities, New Delhi who will equate their qualifications as equivalent to the 10+2 of India. This certificate will have to be submitted at the time of counselling.

Address of AIU, New Delhi:
Evaluation Officer,
Association of Indian Universities,
AIU House, 16 Comrade Indrajit Gupta Marg (Kotla Marg),
New Delhi – 110 002, India
Phone: +91 11 23230059, 23232429, 23232305, Fax: +91 11 23232131
Email: evaluation@aiuweb.org/info@aiuweb.org; Website: aiuweb.org/evaluation

7. For candidates applying under NRI Quota, the Sponsorship should be given by the parents (father or mother) or a blood relative (brother or sister), Candidate who have no living parents or blood relatives and has been taken as a ward by a guardian i.e., by some other NRI relative living abroad with suitable proof of relationship and domicile with copies of Valid passport and visa copies.

8. The selected NRI candidate must join on the specified date. Failure to join on the mentioned date shall result in cancellation of the seat.

Required Documents for Admission under NRI Category

Note: All certificates should be produced in English or Translated version and notarised by a notary along with the original version.

Certified copy (English translated) of educational marks sheets. NEET eligibility certificate Class 10+2/12th Equivalence Certificate obtained from the Association of Indian Universities, New Delhi. Copy of Passport and Visa wherever applicable. Proof of NRI status of the candidate/sponsors (parents/blood relatives/legal guardian). Birth certificate of the candidate. Registration certificate/Residential permit from local police. Student Visa, PIO Card or OCI Card whichever is/are applicable. Any other documents required by the Government of India from time to time.

5. Selection of Students:

Procedure for selection to MBBS course shall be as follows:-

I. There shall be a single eligibility cum entrance examination namely ‘National Eligibility-cum-Entrance Test for admission to MBBS course’ in each academic year. The overall superintendency, direction and control of National Eligibility-cum-Entrance Test shall vest with Medical Council of India. However, Medical Council of India with the previous approval of the Central Government shall select organizations to conduct ‘National Eligibility-cum-Entrance Test for admission to MBBS course.

II. In order to be eligible for admission to MBBS Course for a particular academic year, it shall be necessary for a candidate to obtain minimum of marks at 50th percentile in ‘National Eligibility-cum-Entrance Test to MBBS course' held for the said academic year. However, in respect of candidates belonging to Scheduled Castes, Scheduled Tribes, Other Backward Classes, the minimum marks shall be at 40th percentile. In respect of candidates with locomotory
disability of lower limbs terms of Clause 4(3) above, the minimum marks shall be at 45th percentile. The percentile shall be determined on the basis of highest marks secured in the All-India common merit list in ‘National Eligibility-cum-Entrance Test for admission to MBBS course’. Provided when sufficient number of candidates in the respective categories fail to secure minimum marks as prescribed in National Eligibility-cum-Entrance Test held for any academic year for admission to MBBS Course, the Central Government in consultation with Medical Council of India may at its discretion lower the minimum marks required for admission to MBBS Course for candidates belonging to respective categories and marks so lowered by the Central Government shall be applicable for the said academic year only.”

III. The reservation of seats in medical colleges for respective categories shall be as per applicable laws prevailing in States/Union Territories. An all India merit list as well as State-wise merit list of the eligible candidates shall be prepared on the basis of the marks obtained in National Eligibility-cum-Entrance Test and candidates shall be admitted to MBBS course from the said lists only.

IV. No Candidate who has failed to obtain the minimum eligibility marks as prescribed in Sub-clause (ii) above shall be admitted to MBBS Course in the said academic year.

V. All admissions to MBBS course within the respective categories shall be based solely on marks obtained in the National Eligibility-cum-Entrance Test.”

VI. To be eligible for admission to MBBS course, a candidate must have passed at first attempt in the subjects of Physics, Chemistry, Biology/Bio-technology and English individually and must have obtained a minimum of 50% marks taken together in Physics, Chemistry and Biology/Bio-technology at the qualifying examination as mentioned in clause (2) of Regulation 4 and in addition must have come in the merit list of "National Eligibility-cum-Entrance Test" for admission to MBBS course. In respect of candidates belonging to Scheduled Castes, Scheduled Tribes or other Backward Classes the minimum marks obtained in Physics, Chemistry and Biology/Bio-technology taken together in qualifying examination shall be 40% instead of 50%. In respect of candidates with locomotory disability of lower limbs in terms of Clause 4(3) above, the minimum marks in qualifying examination in Physics, Chemistry and Biology/Bio-technology taken together in qualifying examination shall be 45% instead of 50%. Provided that a candidate who has appeared in the qualifying examination and has not been declared, he/she may be provisionally permitted to take up the National Eligibility-cum-Entrance Test and in case of selection for admission to the MBBS course, he/she shall not be admitted to that course until he fulfils the eligibility criteria under Regulation 4.

VII. The Central Board of Secondary Education shall be the organization to conduct National Eligibility-cum-Entrance Test for admission to MBBS course.
5A Common Counseling:

1. There shall be a common counselling for admission to MBBS course in all Medical Educational Institutions on the basis of merit list of the National Eligibility Entrance Test.

2. The Designated Authority for counselling for the 15% All India Quota seats of the contributing States shall be the Directorate General of Health Services.

3. The counselling for all admission to MBBS course in all Medical Educational Institutions in a State/Union Territory, including Medical Educational Institutions established by the Central Govt, State Govt, University, Deemed University, Trust, Society/Minority Institutions/Corporations or a Company shall be conducted by the State/Union Territory Govt. Such common counselling shall be under the overall superintendence, direction, and control of the State/Union Territory Govt.

(The above clause 5 “Selection of students” is subject to amendments, if any, by the Supreme Court of India in the admission year 2017 and thereafter)

6. Migration:

1. Migration of students from one medical college to another medical college may be granted on any genuine ground subject to the availability of vacancy in the college where migration is sought and fulfilling the other requirements laid down in the Regulations. Migration would be restricted to 5% of the sanctioned intake of the college during the year. No migration will be permitted on any ground from one medical college to another located within the same city.

2. Migration of students from one College to another is permissible only if both the colleges are recognised by the Central Government under section 11(2) of the Indian Medical Council Act, 1956 and further subject to the condition that it shall not result in increase in the sanctioned intake capacity for the academic year concerned in respect of the receiving medical college.

3. The applicant candidate shall be eligible to apply for migration only after qualifying in the first professional MBBS examination. Migration during clinical course of study shall not be allowed on any ground.

4. For the purpose of migration an applicant candidate shall first obtain “No Objection Certificate” from the college where he is studying for the present and the university to which that college is affiliated and also from the college to which the migration is sought and the university to it that college is affiliated. He/She shall submit his application for migration within a period of 1 month of passing (Declaration of result of the 1st Professional MBBS examination) along with the above cited four “No Objection Certificates” to: (a) the Director of Medical Education of the State, if migration is sought from one college to another within the same State or (b) the Medical Council of India, if the migration is sought from one college to another located outside the State.

5. A student who has joined another college on migration shall be eligible to appear in the IInd professional MBBS examination only after attaining the minimum attendance in that college in the subjects, lectures, seminars etc. required for appearing in the examination prescribed under Regulation 12(1).

Note-1: The State Governments/Universities/Institutions may frame appropriate guidelines for grant of No Objection Certificate or migration, as the case may be, to the students subject to provisions of these regulations.

Note-2: Any request for migration not covered under the provisions of these Regulations shall be referred to the Medical Council of India for consideration on individual merits by the Director (Medical Education) of the State or the Head of Central Government Institution concerned.
decision taken by the Council on such requests shall be final.

Note-3: The College/Institutions shall send intimation to the Medical Council of India about the number of students admitted by them on migration within one month of their joining. It shall be open to the Council to undertake verification of the compliance of the provisions of the regulations governing migration by the Colleges at any point of time.

7. Training Period and Time Distribution:

1. Every student shall undergo a period of certified study extending over 4 ½ academic years divided into 9 semesters, (i.e. of 6 months each) from the date of commencement of his study for the subjects comprising the medical curriculum to the date of completion of the examination and followed by one year compulsory rotating internship. Each semester will consist of approximately 120 teaching days of 8 hours each college working time, including one hour of lunch.

2. The period of 4 ½ years is divided into three phases as follows:-

   a) Phase-I (two semesters) - consisting of Pre-clinical subjects (Human Anatomy, Physiology including Bio-Physics, Bio-chemistry and introduction to Community Medicine including Humanities). Besides 60 hours for introduction to Community Medicine including Humanities, rest of the time shall be somewhat equally divided between Anatomy and Physiology plus Biochemistry combined (Physiology 2/3 & Biochemistry 1/3).

   b) Phase-II (3 semesters) - consisting of para-clinical / clinical subjects. During this phase teaching of para-clinical and clinical subjects shall be done concurrently. The para-clinical subjects shall consist of Pathology, Pharmacology, Microbiology, Forensic Medicine including Toxicology and part of Community Medicine. The clinical subjects shall consist of all those detailed below in Phase III. Out of the time for Para-clinical teaching approximately equal time be allotted to Pathology, Pharmacology, Microbiology and Forensic Medicine and Community Medicine combined (1/3 Forensic Medicine & 2/3 Community Medicine). See Appendix C.

   c) Phase-III (Continuation of study of clinical subjects for seven semesters after passing Phase-I). The clinical subjects to be taught during Phase II & III are Medicine and its allied specialties, Surgery and its allied specialties, Obstetrics and Gynaecology and Community Medicine. Besides clinical posting as per schedule mentioned herewith, rest of the teaching hours be divided for didactic lectures, demonstrations, seminars, group discussions etc. in various subjects. The time distribution shall be as per Appendix C. The Medicine and its allied specialties training will include General Medicine, Paediatrics, Tuberculosis and Chest, Skin and Sexually Transmitted Diseases, Psychiatry, Radio-diagnosis, Infectious diseases etc. The Surgery and its allied specialties training will include General Surgery, Orthopaedic Surgery including Physio-therapy and Rehabilitation, Ophthalmology, Otorhinolaryngology, Anaesthesia, Dentistry, Radio-therapy etc. The Obstetrics & Gynaecology training will include family medicine, family welfare planning etc.

3. The first 2 semester (approximately 240 teaching days) shall be occupied in the Phase I (Pre-clinical) subjects and introduction to a broader understanding of the perspectives of medical education leading to delivery of health care. No student shall be permitted to join the Phase II (Para-clinical/clinical) group of subjects until he has passed in all the Phase I (Pre-clinical subjects) for which he will be permitted not more than four attempts (I MBBS University examination), provided four chances are completed in three years from the date of enrolment.

4. After passing pre-clinical subjects, 1½ year (3 semesters) shall be devoted to para-clinical subjects. Phase II will be devoted to para-clinical & clinical subjects, along with clinical postings. During clinical phase (Phase III) pre-clinical and para-clinical teaching will be integrated into the teaching of clinical subjects where relevant.
5. Didactic lectures should not exceed one third of the time schedule; two third schedule should include practicals, clinicals or and group discussions. Learning process should include living experiences, problem oriented approach, case studies and community health care activities.

6. The Universities and other authorities concerned shall organize admission process in such a way that teaching in first semester starts by **1st of August** each year.

6A. There shall be no admission of students in respect of any academic session beyond 30th September under any circumstance. The Universities shall not register any student admitted beyond the said date.

6B. The University may direct, that any student identified as having obtained admission after the last date for closure of admission be discharged from the course of study.

The institution which grants admission to any student after the last date specified from the same shall also be liable to face such action as may be prescribed by MCI including surrender of seats equivalent to the extent of such admission made from its sanctioned intake capacity for the succeeding academic year.

7. The supplementary examination for 1st Professional MBBS examination may be conducted within 6 months* so that the students who pass can join the main batch and the failed students will have to appear in the subsequent year provided that the students who pass the supplementary examination shall be allowed to appear in the second professional MBBS examination only after he/she completes the full course of study of three semesters (i.e. 18 months) for the second professional MBBS examination irrespective of the examination of the main batch.

Conduct of supplementary examination and declaration of its results, ideally before 1st August each year so as to enable students passing the supplementary examination to join the regular batch of II MBBS at the earliest. Students can be permitted to appear for the II MBBS University examination with the main batch (November session), provided that a minimum of 75% of attendance is feasible and obtained in each subject.

8. Maximal duration permitted to complete the MBBS course (examinations) is 8 years.

9. In case of a candidate discontinuing in the middle and wishing to rejoin, the period of absence will be condoned only if prior permission has been sought from the University before discontinuing, failing which he admission will be considered as cancelled.

**Subjects covered during different Phases of MBBS**

(Details of course and evaluation content of each subject is provided in Chapter III)

**Phase I (Pre-Clinical subjects)**

1. Human Anatomy
2. Human Physiology
3. Biochemistry
4. Introduction to Humanities and Community Medicine

**Phase II (Para-Clinical subjects)**

1. Pathology
2. Microbiology
3. Pharmacology
4. Forensic Medicine including Toxicology
5. Community Medicine

**Phase II & III (Clinical subjects)**

1. Medicine and its allied specialities
   a) Medicine
   b) Paediatrics
   c) Psychiatry
   d) Dermatology & STD
   e) Tuberculosis and Respiratory Medicine
2. Surgery and its allied specialities
   a) Surgery
   b) Orthopaedics
   c) Radiodiagnosis and Radiotherapy
   d) Oto-rhino-laryngology
   e) Ophthalmology
3. Obstetrics & Gynaecology
4. Family Planning (Training in Family Planning should be emphasized in all the three phases and during internship)
5. Community Medicine
6. Emergency Medicine
8. Phase Distribution and Timing of Examinations:

- **1st professional Examination (during 2nd semester)**
- **2nd professional Examination (during 5th semester)**
- **3rd professional Part I (during 7th semester)**
- **3rd professional Part II (Final Professional)**

**Note:**

a) Passing in 1st Professional is compulsory before proceeding to Phase II training.

b) A student who fails in the 2nd professional examination, should not be allowed to appear 3rd Professional Part I examination unless he passes all subjects of 2nd Professional examination.

c) Passing in 3rd Professional (Part I) examination is not compulsory before entering for 8th & 9th semester training, however passing of 3rd Professional (Part I) is compulsory for being eligible for 3rd Professional (Part II) examination.

d) The student is required to complete the course within 8 years of admission after which he will not be allowed to appear for any examination, unless he has an arrear of one subject alone.

During 3rd to 9th semesters, clinical postings of 3 hours duration daily as specified in the Table below is suggested for various departments, after Introductory course in Clinical Methods in Medicine & Surgery of 2 weeks each for the whole class.

Clinical methods in Medicine and Surgery for whole class will be for 2 weeks each respectively at the start of 3rd semester

* This posting includes training in Radiodiagnosis and Radiotherapy where existent.

** This posting includes exposure to Rehabilitation and Physiotherapy.

*** This posting includes exposure to laboratory medicine and infectious diseases.

**** This posting includes exposure to dressing and Anaesthesia.

***** This includes maternity training and Family medicine and the 3rd semester posting shall be in Family Welfare Planning.
12. Examination Regulations:

Essentialities for qualifying to appear in professional examinations.

The performance in essential components of training are to be assessed, based on:

(1) **Attendance:**

75% attendance in a subject for appearing in the examination is compulsory inclusive of attendance in non-lecture teaching i.e. seminars, group discussions, tutorials, demonstrations, practicals, hospital (Tertiary, Secondary, Primary) posting and bed side clinics etc."

For appearing at the University Examination, student should have minimum 75% attendance in each subject, even if shortage is in one subject, he/she will be detained for the entire examination.

Students cannot appear in part or separately in individual subjects during the first appearance at the Professional examination.

(2) **Internal Assessment:**

(i) It shall be based on day to day assessment (see note), evaluation of student assignment, preparation for seminar, clinical case presentation etc.

(ii) Regular periodical examinations shall be conducted throughout the course. Two notified tests per semester and a model examination are minimum compulsory before each University examination. The computation of internal assessment is based on n-1 where n is the number of notified tests.

Improvement examinations for students who have failed the University examination at first attempt: a minimum of two theory examinations are to be conducted as improvement examinations. Students who wish to appear for these improvement examinations need to obtain prior permission of the University. Internal Assessment marks cannot be improved after two attempts at the University examination.

(iii) Day to day records should be given importance during internal Assessment. The marks for the record book submitted are to be included in the practical internal assessment.

(iv) Weightage for the internal assessment shall be 20% of the total marks in each subject.

(v) Student must secure at least 35% marks of the total marks fixed for internal assessment in a particular subject in order to be eligible to appear in final university examination of that subject.

**Note:**

Internal assessment shall relate to different ways in which students participation in learning participation in learning process during semesters in evaluated.

Some examples are as follows:
(i) Preparation of subject for students seminar.

(ii) Preparation of a clinical case for discussion.

(iii) Clinical case study/problem solving exercise.

(iv) Participation in Project for health care in the community (planning stage to evaluation).

(v) Proficiency in carrying out a practical or a skill in small research project.

(vi) Multiple choice questions (MCQ) test after completion of a system/teaching.

Each item tested shall be objectively assessed and recorded. Some of the items can be assigned as home work/vacation work.

**Students cannot appear in part or separately in individual subjects during the first appearance at the Professional examination.**

(3) **University Examinations:**

Theory papers will be prepared by the examiners as prescribed. Nature of questions will be short answer type/objective type and marks for each part indicated separately. Question papers should preferably be of short structure/objective type.

Practicals/clinicals will be conducted in the laboratories or hospital wards. The objective will be to assess proficiency in skills, conduct of experiment, interpretation of data and logical conclusion. Clinical cases should preferably include common diseases and not esoteric syndromes or rare disorders. Emphasis should be on candidate’s capability in eliciting physical signs and their interpretation.

Clinical cases/practicals shall take into account common diseases which the student is likely to come in contact in practice. Rare cases/obscure syndromes, shall not be included for final examination.

Viva/oral includes evaluation of management approach and handling of emergencies. Candidate’s skill in interpretation of common investigative data, X-rays, identification of specimens, ECG, etc. also is to be evaluated.

The examinations are to be designed with a view to ascertain whether the candidate has acquired the necessary for knowledge, minimum skills along with clear concepts of the fundamentals which are necessary for him to carry out his professional day to day work competently. Evaluation will be carried out on an objective basis. Question papers should preferably be of short structure/objective type. During evaluation (both Internal and External) it shall be ascertained if the candidate has acquired the skills as detailed in **Appendix-A.**

**Scrutiny of theory question papers received from paper setters:**

In order to ensure uniformity and minimum standards acceptable for evaluation for evaluation a Vetting Committee and a Chairman of the Board of paper setters be constituted by the Vice Chancellor for each subject of the four Professional examinations.

**First Professional:**

In the second Semester of Phase 1 training, in the subjects of Anatomy, Physiology and Biochemistry (Regular in June session followed by Supplementary examination).
Second Professional:

In the Fifth Semester of Phase II training, in the subjects of Pathology, Microbiology, Pharmacy and Forensic Medicine. (Regular in Nov session, followed by supplementary in June session).

Third Professional:

Third Professional:

Part II- (Final Professional) - At the end of Phase III training in the subjects of Medicine, Surgery, Obstetrics & Gynaecology and Pediatrics. (Regular in Nov session, followed by supplementary in June session).

Note:

a) Passing in 1st Professional is compulsory before proceeding to Phase II training.  
b) A student who fails in the 2nd professional examination, should not be allowed to appear 3rd Professional Part I examination unless he passes all subjects of 2nd Professional examination.  
c) Passing in 3rd Professional (Part-1) is compulsory for being eligible for 3rd Professional (Part II) examination.  
d) The student is required to complete the course within 8 years of admission after which he will not be allowed to appear for any examination, unless he has an arrear of one subject alone.

(4) Distribution of marks in various disciplines:

Long Answer Question (LAQ) of 10 marks each and Short Answer Question (SAQ) of 5 marks each to be included in each paper of 40 or 50 or 60 marks theory paper.

The subjects of Anatomy, Physiology and Biochemistry will have 2 papers of 50 marks each, without separate sections in each paper and 2 hours for each paper. Each paper will include 2 LAQs of 10 marks each, 4 SAQs of 5 marks each and 5 SAQs of 2 marks each.

The subjects of Community Medicine, Medicine & Surgery will have 2 papers of 60 marks each with Section A & B and 3 hours for each paper. Each Section will include 1 LAQ of 10 marks and 4 SAQs of 5 marks each.

The subjects of Forensic Medicine, Otorhinolaryngology, Ophthalmology and Paediatrics will have 1 paper of 40 marks without separate sections and 2 hours to answer. The single paper will include 1 LAQ of 10 marks and 6 SAQs of 5 marks each.

The subjects of Pathology, Microbiology, Pharmacology and OBG will have 2 papers of 40 marks each without separate sections and 2 hours for each paper. Each paper will include 1 LAQ of 10 marks and 6 SAQs of 5 marks each.
The details of the distribution of marks in each paper/section, for each subject course content is provided in chapter IV.

Pass: In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals.

(A) First Professional examination (Pre-clinical Subjects):

(a) Anatomy

Theory-Two papers of 50 marks each
(One applied question of 10 marks in each paper) 100 marks.

| Oral (Viva) | 20 marks |
| Practical | 40 marks |
| Internal Assessment (Theory-20; Practical-20) | 40 marks |
| **Total** | **200 marks** |

(b) Physiology including Biophysics:

Theory-Two papers of 50 marks each
(One applied question of 10 marks in each paper) 100 marks

| Oral (Viva) | 20 marks |
| Practical | 40 marks |
| Internal Assessment (Theory-20; Practical-20) | 40 marks |
| **Total** | **200 marks** |

(c) Biochemistry

Theory-Two papers of 50 marks each
(One applied question of 10 marks in each paper) 100 marks

| Oral (Viva) | 20 marks |
| Practical | 40 marks |
| Internal Assessment (Theory-20; Practical-20) | 40 marks |
| **Total** | **200 marks** |

Pass: In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals.

(B) Second Professional Examination (Para-clinical subjects):

(a) Pathology

Theory-Two papers of 40 marks each
(One applied question of 10 marks in each paper) 80 marks

| Oral (Viva) | 15 marks |
| Practical | 25 marks |
| Internal assessment (Theory-15; Practical-15) | 30 marks |
| **Total** | **150 marks** |

(b) Microbiology
(c) **Pharmacology**

Theory—Two papers of 40 marks each  
Containing one question on clinical therapeutics 80 marks  
Oral (Viva) 15 marks  
Practical 25 marks  
Internal assessment  (Theory-15; Practical-15) 30 marks  
Total 150 marks

(d) **Forensic Medicine**

Theory—one paper 40 marks  
Oral (Viva) 10 marks  
Practical/Clinicals 30 marks  
Internal assessment  (Theory-10; Practical-10) 20 marks  
Total 100 marks

**Pass:** In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals.

(D) **Third Professional:**

(i) **PART 1 (Clinical subjects)**

Part 1: To be conducted during end period of seventh semester.

(a) **Ophthalmology:**

Theory: One paper 40 marks  
(should contain one question on pre-clinical and para-clinical aspects, of 10 marks)  
Oral (Viva) 10 marks  
Clinical 30 marks  
Internal assessment  (Theory-10; Practical-10) 20 marks  
Total 100 marks

(b) **Otorhinolaryngology:**

Theory: One paper 40 marks  
(should contain one question on pre-clinical and para-clinical aspects, of 10 marks)  
Oral (Viva) 10 marks  
Clinical 30 marks  
Internal assessment  (Theory -10 Practical-10) 20 marks  
Total 100 marks
(c) **Community Medicine including Humanities:**

Theory: Two papers of 60 marks each  
120 marks
(includes problem solving, applied aspects of management at primary level including essential drugs, occupational (agro based) diseases, rehabilitation and social aspects of community).

Oral (Viva)  
10 marks
Practical/Project evaluation  
30 marks
Internal assessment  
40 marks
(Theory -20; Practical-20)

Total  
200 marks

**Pass:** In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals.

**PART-II**

Each paper shall have two sections. Questions requiring essay type answers may be avoided.

(a) **Medicine:**

Theory- Two papers of 60 marks each  
120 marks
Paper I- General Medicine

Paper II- General Medicine (including Psychiatry, Dermatology and S.T.D.)
(Shall contain one question on basic sciences and allied subjects)

Oral (Viva) Interpretation of X-ray ECG, etc.  
20 marks
Clinical (Bed side)  
100 marks
Internal assessment  
60 marks
(Theory-30; Practical-30)

Total  
300 marks

(b) **Surgery:**

Theory-Two papers of 60 marks each  
120 marks
Paper I- General Surgery (Section 1) Orthopaedics (Section 2)
PAPER II- General Surgery including Anaesthesiology, Dental diseases and Radiology.
(shall contain one question on basic sciences and allied subjects)

Oral (Viva) Interpretation of Investigative data  
20 marks
Clinical (Bed Side)  
100 marks
Internal assessment  
60 marks
(Theory-30; Practical-30)

Total  
300 marks

Paper 1 of Surgery shall have one section in Orthopaedics. The questions on Orthopaedic Surgery be set and assessed by examiners who are teachers in the Orthopaedic surgery.

(c) **Obstetrics and Gynaecology:**

Theory Two papers of 40 marks each  
80 marks
Paper I- Obstetrics including social obstetrics.

Paper II - Gynaecology, Family Welfare and Demography
(Shall contain one question on basic sciences and allied subjects)

Oral (Viva) including record of delivery cases (20+10)  
30 marks
Clinical  
50 marks
Internal assessment  
40 marks
(Theory-20; Practical-20)

Total  
200 marks
(d) Pediatrics (Including Neonatology):

Theory: One paper 40 marks
(Shall contain one question on basic sciences and allied subjects)
Oral (Viva) 10 marks
Clinical 30 marks
Internal assessment 20 marks
(Theory-10; Practical-10)

Total 100 marks

Pass: In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals.

13 Appointment of Examiners:

(1) No person shall be appointed as an examiner in any of the subjects of the Professional examination leading to and including the final Professional examinations for the award of the MBBS degree unless he has taken at least five years previously, a doctorate degree of a recognized university or an equivalent qualification in the particular subject as per recommendation of the Council on teachers’ eligibility qualifications and has had at least five years of total teaching experience in the subject concerned in a college affiliated to a recognized university at a faculty position.

(2) There shall be at least four examiners for 100 students, out of whom not less than 50% must be external examiners. Of the four examiners, the senior most internal examiner will act as the Chairman and co-ordinator of the whole examination programme so that uniformity in the matter of assessment of candidates is maintained. Where candidates appearing are more than 100, one additional examiner, for every additional 50 or part thereof candidates appearing, be appointed.

(3) Non medical scientists engaged in the teaching of medical students as whole time teachers, may be appointed examiners in their concerned subjects provided they possess requisite doctorate qualifications and five year teaching experience of medical students after obtaining their postgraduate qualifications. Provided further that the 50% of the examiners (Internal & External) are from the medical qualification stream

(4) External examiners shall not be from the same university and preferably be from outside the state.

(5) The internal examiner in a subject shall not accept external examinership for a college from which external examiner is appointed in his subject.

(6) A university having more than one college shall have separate sets of examiners for each college, with internal examiners from the concerned college.

(7) External examiners shall rotate at an interval of 2 years.

(8) There shall be a Chairman of the Board of paper-setters who shall be an internal examiner and shall moderate the questions.

(9) Except Head of the department of subject concerned in a college/institution, all other with the rank of reader or equivalent and above with requisite qualifications and experience shall be appointed internal examiners by rotation in their
subjects; provided that where there are no posts of readers, then an Assistant Professor of 5 years standing as Assistant Professor may be considered for appointment as examiner.

(10) **Grace marks are applicable only when the candidate appears for the University Examination in all subjects of that phase/professional examination. Grace marks for practical examinations are not permitted.**

A passing board is constituted for finalizing the results of each phase. The members of the board can allot grace marks of maximum 5% only in one subject if the candidate has passed in other subjects. The grace mark of not more than 5% will be added for one subject only after the marks obtained in theory, at the University examination are scaled down to 100% in the particular subject. That is 6 grace marks, 5 grace marks, 4 grace marks and 2 grace marks can be allotted for a total theory marks of 120, 100, 80, 40 respectively.

I MBBS: Grace marks of 5 are permissible out of 100 in Anatomy or Physiology or Biochemistry, provided that the candidate has appeared for all three subjects at that examination and passed the other two subjects.

II MBBS: Grace marks of 4 are permissible out of 80 in Pathology or Microbiology or Pharmacology, or 2 out of 40 in Forensic Medicine, provided that the candidate has appeared for all four subjects at that examination and passed the other three subjects.

III MBBS (Part 1): Grace marks of 6 are permissible on 120 in Community Medicine, or 2 out of 40 in Otorhinolaryngology or Ophthalmology, provided that the candidate has appeared for all three subjects at that examination and passed the other two subjects.

IV MBBS (Part 2): Grace marks of 6 are permissible out of 120 in Medicine or Surgery, or 4 out of 80 in Obstetrics & Gynaecology, or 2 out of 40 in Paediatrics, provided that the candidate has appeared for all four subjects at that examination and passed the other three subjects.

(11) Re-evaluation of theory papers is not permitted.
CHAPTER IV
CURRICULUM

9. Pre-clinical Subjects of Phase I:

In the teaching of these subjects stress shall be laid on basic principles of the subjects with more emphasis on their applied aspects.

(1) Human Anatomy

This entails course content (goal, objectives, course content, skills as well as distribution of marks for theory and Practical University examinations as per MCI and a model question paper in each subject)

(2) Human Physiology Including Biophysics

(3) Biochemistry

(4) Community Medicine

9. Para-Clinical Subjects of Phase II:

(1) Pathology

(2) Microbiology

(3) Pharmacology

(4) Forensic Medicine Including Toxicology & Medical jurisprudence

(5) Community Medicine (Refer to Phase I)

10. Clinical Subjects of Phase II & III:

The teaching and training in clinical subjects will commence at the beginning of Phase II and continue throughout.

The clinical subjects will be taught to prepare the MBBS graduates to understand and manage clinical problems at the level of a general practitioner. Exposure to subject matter will be limited to orientation and knowledge required of a general doctor. Maximum attention to the diagnosis and management of the most common and important conditions encountered in general practice should be emphasised in all clinical subjects areas. Instructions in clinical subjects should be given in out-patient and in-patient, during clinical posting.

Each of the clinical departments shall provide integrated teaching calling on pre-clinical, para-clinical and other clinical departments to join in exposing the students to the full range of disciplines relevant to each clinical area of study. Problem solving approach will be emphasised based on basic social sciences and a continuation of clinical and laboratory syllabi to optimally understand and manage each clinical condition.

The course shall comprise of:
(1) Otorhinolaryngology

(2) Ophthalmology

(3) Community Medicine (Refer to Phase I)

(4) Medicine & Allied Specialities

A) Medicine
B) Respiratory medicine
C) Psychiatry
D) Dermatology and sexually transmitted diseases
E) Paediatrics including neonatology

(5) Surgery & its allied specialities

A) Surgery including paediatric surgery
B) Orthopaedics
C) Radiodiagnosis & radiotherapy
D) Dentistry

(6) Obstetrics and gynaecology

(7) Family Planning Training in Family Planning should be emphasised in all three phases during internship as per guideline provided in Appendix B.

(8) Emergency Medicine/ Anaesthesiology
HUMAN ANATOMY
HUMAN ANATOMY

GOAL

The broad goal of the teaching of undergraduate students in Anatomy aims at providing comprehensive knowledge of the gross and microscopic structure and development of human body to provide a basis for understanding the clinical correlation of organs or structures involved and the anatomical basis for the disease presentations.

OBJECTIVES:

Knowledge:

At the end of the course the student should be able to:

1. Comprehend the normal disposition, clinically relevant interrelationships, functional and cross sectional anatomy of the various structures in the body.
2. Identify the microscopic structure and correlate elementary ultra-structure of various organs and tissues and correlate the structure with the functions as a prerequisite for understanding the altered state in various disease processes.
3. Comprehend the basic structure and connections of the central nervous system to analyse the integrative and regulative functions of the organs and systems. He/She should be able to locate the site of gross lesions according to the deficits encountered.
4. Demonstrate knowledge of the basic principles and sequential development of the organs and systems, recognise the critical stages of development and the effects of common teratogens, genetic mutations and environmental hazards.
5. He/She should be able to explain the developmental basis of the major variations and abnormalities.

Skills:

At the end of the course the student should be able to:

1. Identify and locate all the structures of the body and mark the topography of the living anatomy.
2. Identify the organs and tissues under the microscope.
3. Understand the principles of karyotyping and identify the gross congenital anomalies.
4. Understand principles of newer imaging techniques and interpretation of Computerised Tomography (CT) Scan, Sonogram etc.
5. Understand clinical basis of some common clinical procedures i.e., intramuscular & intravenous injection, lumbar puncture and kidney biopsy etc.

Integration:

From the integrated teaching of other basic sciences, student should be able to comprehend the regulation and integration of the functions of the organs and systems in the body and thus interpret the anatomical basis of disease process.

COURSE CONTENTS

MUST KNOW CATEGORY

General Anatomy:

Anatomical positions, terms of movement, colours used in anatomical drawings. Constituents of skeleton, types of bones, classification of bones with examples, names of bones, general features of different bones. Parts of typical young long bone. Types of cartilages with suitable examples. Classification of joints, general features of different types
of joints with suitable examples. Types of blood vessels, collateral circulation, components of lymphatic system. Classification and features of individual types of muscles. Parts of Nervous system, basic structure and types of neurons & neuroglial cells. Subdivisions, introduction to structure and functions of Autonomic nervous system. Skin & Fascia.

**General Embryology:**

**Systemic Embryology:**

**General Histology:**

- Structure of cell, Types of epithelium with suitable examples, Types & features of individual cartilages. Structure of compact and cancellous bone. Microstructure of skeletal, smooth and cardiac muscle. Microstructure of arteries and veins, spleen, thymus, lymph node, tonsil, thick & thin skin.

**Systemic Histology:**

**Upper limb:**

**Lower limb:**

- Parts of lower limb, general features of hip bone, femur, tibia & fibula. Thigh muscles - nerve supply & action. Femoral triangle. Femoral sheath, adductor canal, femoral artery, inguinal

**Thorax:**

**Abdomen, pelvis & perineum:**

**Head & Neck:**

**Neuro Anatomy:**

Medical Genetics; Genetic Syndromes – Down’s, Klinefelter’s & Turner’s, Barr body
GENERAL ANATOMY:

Types of ossification of bones, general pattern of blood supply of bone. Epiphyseal Cartilage (Growth cartilage). Parts of skeletal muscles, nerve supply, neuromuscular spindles. Myelination of nerve fibres, degeneration and regeneration of neurons.

GENERAL EMBRYOLOGY:

SYSTEMIC EMBRYOLOGY:

GENERAL HISTOLOGY:

Classification of glands with suitable examples, Structure of woven & ossifying bone, mucosa associated lymphatic tissue & structure of peripheral nerve fibre.

SYSTEMIC HISTOLOGY:

Histology of taste buds, gallbladder, large intestine, bowman's cup. PCT, DCT, juxta glomerular apparatus, urethra, seminal vesicle, prostate, mammary gland, placenta, umbilical cord.

UPPER LIMB:

LOWER LIMB:

Tarsal bones, patella, fascia lata & its modifications, profunda femoris artery, obturator & accessory obturator nerve & vessels. Trendlendberg's sign, cruciate & trochanteric anastamoses. Anastamoses around knee joint, ankle joint, tibial artery, plantar arch, layers of sole, plantar aponeurosis & lymphatic drainage of lower limb.

THORAX:

Azygos lobe, Sibson's fascia, anterior mediastinum & thymus, thoracic duct, oesophagus, left atrium, left ventricle, superficial & deep cardiac plexuses, pulmonary trunk & superior vena cava.
**Abdomen, pelvis and perineum:**

Planes & regions of abdomen, general features of bony pelvis & lumbar vertebrae, anterior abdominal wall muscles & fascia, peritoneal disposition, greater omentum, ligaments of Liver, rest of small & large intestine & spleen, inferior vena cava, aorta, ureter, renal vascular segments. Psoas & Iliacus muscles & Lymphatic drainage of kidney, urinary bladder, prostate, uterus, rectum, anal canal & testis. Suprarenal gland. Epididymis & scrotum, ovary, internal iliac vessels, hemorrhoids, seminal vesicle, anal sphincters, contents of superficial and deep perineal pouches, pudendal nerve & internal pudendal vessels, female external genitalia.

**Head & Neck:**

**Neuro Anatomy:**

**Medical Genetics:**

Karyotyping

**PRACTICAL SKILLS**

**Gross Anatomy:**
Same as theory

**Osteology:**
Same as theory

**Embryology:**
Same as theory

**Histology:**
Same as theory

**Radiological Anatomy:**
Identification of normal anatomical features in skiagrams. Identification of the normal anatomical features in special investigations.

**Sectional Anatomy:**
Anatomical features at the following vertebral levels
Transverse section Cervical 5 & 7,
Thoracic 4, 8, 10, 12
Lumbar 1,3 & 5.
Median sagittal of head section of head and neck;
Median sagittal section of brain;
Horizontal section of brain at the level of 4th ventricle foramen.
Coronal section of cerebrum at the level of the central sulcus and splenium.

Surface Anatomy:
Location of arterial pulses of the superficial temporal artery, common carotid artery, axillary artery, brachial artery, radial artery, femoral artery, popliteal artery, posterior tibial artery and dorsalis pedis artery. Palpation/location of great auricular nerve, ulnar nerve and common peroneal nerve. Palpation and identification of the bony prominences around shoulder, elbow, wrist, hip, knee and ankle. Identification/location of internal jugular vein, median cubital vein, dorsal venous arch of hand, great saphenous vein, small saphenous vein and dorsal venous arch of foot. Location and surface anatomy of scrotal part of vas deferens, lungs, heart, liver, spleen and kidneys.

Genetics:
Identification of normal and abnormal Karyotyping.

HUMAN ANATOMY - DISTRIBUTION OF MARKS

Theory-Two papers of 50 marks each (One applied question of 10 marks in each paper) 100 marks.
Oral (Viva) 20 marks
Practical 40 marks
Internal Assessment (Theory-20; Practical-20) 40 marks
Total 200 marks

Pass: In each of the subjects, a candidate must obtain 50 % in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.

ANATOMY THEORY PAPER

Paper I – 50 marks: Upper limb, Lower limb, General Histology, General Embryology, Abdomen & Pelvis, Systemic Embryology (GIT, Genitourinary system), Systemic Histology related to abdomen

Time: 2 hours

Q1. Long Answer Questions: 2 LAQs X 10 marks each (must be structured)
Q2. Short Answer Questions: 4 SAQs X 5 marks each
Q3. Very Short Answer Question: 5 SAQs X 2 marks each

Paper II – 50 marks: Thorax, Systemic Embryology & Histology related to Thorax, Medical Genetics, General Anatomy, Head & Neck, Neuroanatomy, Systemic Embryology & Histology related to Head & Neck & Brain

Time: 2 hours

Q1. Long Answer Questions: 2 LAQs X 10 marks each (must be structured)
ANATOMY PAPER - I
(Upper limb, Lower limb, General Histology, General Embryology, Abdomen & Pelvis, Systemic Embryology (GIT, Genitourinary system), Systemic Histology related to abdomen)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours Maximum marks: 50
1. Describe in detail the formation, branches & applied significance of Brachial plexus. (4+3+3=10)
2. Describe the extent, boundaries, contents & applied significance of Inguinal canal. (1+3+2+4=10)
3. Write short notes on: (4X5=20)
   a. Fertilization & in vitro fertilization techniques
   b. Locking & unlocking of knee.
   c. Microscopic anatomy of Liver
   d. Rotation of midgut loop
4. Answer briefly on: (5X2 = 10)
   a. Any two sites of porto caval anastamoses & their clinical importance
   b. Histology of hyaline cartilage.
   c. Anterior relations of right kidney
   d. Epiploic foramen
   e. Histology of Medium sized artery

ANATOMY PAPER - II
(Thorax, Systemic Embryology & Histology related to Thorax, Medical Genetics, General Anatomy, Head & Neck, Neuroanatomy, Systemic Embryology & Histology related to Head & Neck & Brain)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours Maximum marks: 50
1. Describe the origin, course & branches of coronary arteries. (2+4+4=10)
2. Describe the location, parts, relations & secreto motor nerve supply of submandibular gland. (1+1+4+4=10)
3. Write short notes on: (4X5=20)
   a. Rhomboid fossa.
   b. Microscopic anatomy of Pituitary gland.
c. Fibres present & blood supply of internal capsule.
d. Development of thyroid gland & its anomalies.

4. Answer briefly on: \( (5 \times 2 = 10) \)
   a. Law of ossification.
   b. Barr body.
   c. Carotid sheath.
   d. Little’s area.
   e. Structures within parotid gland.

PRACTICAL EXAMINATION \( (40 \text{ marks}) \)

I) SPOTTERS

a) GROSS ANATOMY \( (10 \times 2 = 20 \text{ marks}) \)
   1. Upper limb – 1
   2. Lower limb – 1
   3. Abdomen & pelvis – 3
   4. Thorax – 1
   5. Head & Neck – 3
   6. Brain – 1

b) HISTOLOGY SPOTTERS \( (10 \times 1 = 10 \text{ marks}) \)
   1. General Histology – 4
   2. Systemic Histology – 6

II) GROSS DISCUSSION \( (2 \times 5 = 10 \text{ marks}) \)
   Discussion – I - Paper –I
   Discussion – II - Paper – II
   5 marks
   5 marks

VIVA \( (20 \text{ marks}) \)

Embryology – 5
Osteology - 5
Radiology – 5
Surface Anatomy - 5
HUMAN PHYSIOLOGY INCLUDING BIO-PHYSICS
HUMAN PHYSIOLOGY INCLUDING BIO-PHYSICS

(A) PHYSIOLOGY:

GOAL

The broad goal of the teaching of undergraduate students in Physiology aims at providing the student comprehensive knowledge of the normal function of the organ systems of the body to facilitate an understanding of the physiological basis of health and disease.

OBJECTIVES

Knowledge

At the end of the course the student will be able to:

1. Explain the normal functioning of all the organ systems and their interactions for well-coordinated total body function.
2. Assess the relative contribution of each organ system to the maintenance of the milieu interior.
3. Elucidate the physiological aspects of normal growth and development.
4. Describe the physiological response and adaptations to environmental stresses.
5. List the physiological principles underlying pathogenesis and treatment of disease.

Skills

At the end of the course the student should be able to:

1. Conduct experiments designed for study of physiological phenomena.
2. Interpret experimental/investigative data.
3. Distinguish between normal and abnormal data derived as a result of test which he/she has performed and observed in the laboratory.

Integration

At the end of the integrated teaching the student should acquire an integrated knowledge of organ structure and function and its regulatory mechanisms.

COURSE CONTENTS

MUST KNOW CATEGORY

General physiology:

Concept of homeostasis, milieu interieur, physiological norms, their range and control. Structure and functions of the cell and cell organelles including cytoskeleton, molecular motors, intercellular connections. Mechanism and modes of transport across cell membrane and the capillary wall. Primary active transport with examples. Secondary active transport with examples. Intercellular communication, Membrane receptors, second messengers and signal transduction. Body fluid compartments.

Blood:

Composition and functions of blood. Functions of plasma proteins, red cells, white cells and thrombocytes. Haemopoiesis and factors regulating it. Erythropoiesis and its regulation.

**Nerve muscle physiology:**

**Excretory system:**

**Digestive system:**

**Endocrine system:**

Male and female reproduction:

Cardiovascular system:

Respiratory system:

Environmental and integrative physiology:

Central nervous system:

Special senses Vision:

Hearing:

Smell:

Receptors and pathways for smell. Cortical and limbic areas associated with smell. Physiology of olfaction.

Taste:

Receptors and pathways for taste. Basic taste modalities and receptor stimulation. Substances evoking primary taste sensations.

PRACTICAL SKILLS

Haematology:

Nerve and Muscle

Mosso’s ergography:

Reproduction

Demonstrations:

CVS:

Respiration:

Nervous system:
Examination of sensory functions. Examination of motor functions including reflexes. Examination of cranial nerves.

Special senses:

**DESIRABLE TO KNOW CATEGORY**

**General physiology:**

**Blood:**
Sickle cell disease

**Nerve muscle physiology:**
Energy sources for muscle contraction

**Excretory system:**
Non-excretory functions of the kidney.

**Digestive system:**
Malabsorption syndrome, Adynamic ileus, megacolon, constipation, Pancreatitis, Gall stones.

**Endocrine system:**
Physiological actions of local hormones

**Male and female reproduction:**
Sex differentiation and development of genitalia in the embryo. Fertilization and implantation

**Cardiovascular system:**
ECG changes in heart blocks. Fetal circulation.

**Respiratory system:**
Respiratory adjustments during breath holding, hyperventilation, increased barometric pressure, drowning. Cyanosis, Asphyxia. Pathophysiology of common respiratory disorders - Periodic breathing, hypercapnea, hypocapnea. Artificial respiration.

**Environmental and integrative physiology:**
Physiology of Yoga. Physiology of Nutrition.
Central nervous system:
Disorders of CSF formation and circulation

Special senses:

PRACTICAL SKILLS

Respiration:
Donder’s model to demonstrate mechanics of respiration. Cardiopulmonary resuscitation. Basal metabolic rate.

Nervous system:
EEG. Evoked potentials. Decerebrate and spinal frog.

Special senses:
Ophthalmoscopy. Audiology.

(B) BIOPHYSICS

GOAL & OBJECTIVES
The broad goal of teaching Biophysics to undergraduate students is that they should understand basic physical principles involved in the functioning of body organs in normal and diseased conditions.

Course Content
Physical principles of transport across cell membranes and across capillary wall. Biopotentials. Physical principles governing flow of blood in heart and blood vessels. Also physical principles governing flow of air in air passages.

PRACTICAL SKILLS
Demonstration of: Biopotential on oscilloscope, Electro Encephalogram (EEG), Electro Myelogram (EMG), Electro Cardiogram (ECG).

PHYSIOLOGY - DISTRIBUTION OF MARKS

Theory-Two papers of 50 marks each
(One applied question of 10 marks in each paper) 100 marks
Oral (Viva) 20 marks
Practical 40 marks
Internal Assessment (Theory-20; Practical-20) 40 marks
Total 200 marks

Pass: In each of the subjects, a candidate must obtain 50 % in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.
**Physiology Theory Paper**

**Paper I** – 50 marks (General Physiology, Blood, Nerve and Muscle, ANS, GI system, Endocrine Physiology, Physiology of Reproduction and Renal system)

**Time: 2 hours**

Q1. Long Answer Questions: 2 LAQs X 10 marks each (must be structured)

Q2. Short Answer Questions: 4 SAQs X 5 marks each,

Q3. Very Short Answer Question: 5 SAQs X 2 marks each

**Paper II** – 50 marks (Cardiovascular System, Respiratory system and Environmental physiology, Neurophysiology-CNS, Special senses and Integrative physiology)

**Time: 2 hours**

Q1. Long Answer Questions: 2 LAQs X 10 marks each (must be structured)

Q2. Short Answer Questions: 4 SAQs X 5 marks each,

Q3. Very Short Answer Question: 5 SAQs X 2 marks each

**Note:** LAQ should be from must know area. If LAQ is from a particular section, it should be avoided in short notes. Total marks is 100. 80 marks should be asked from must know area and 20 marks should be asked from desirable to know area.

**MODEL QUESTION PAPERS:**

**PHYSIOLOGY PAPER – I**

(General Physiology, Blood, Nerve and Muscle, ANS, GI system, Endocrine Physiology, Physiology of Reproduction and Renal system)

**ANSWER ALL QUESTIONS**

Illustrate your answer with suitable diagrams

**Time: 2 hours**

**Maximum marks: 50**

1. Describe the Neuromuscular Junction and explain in detail the transmission across the Neuromuscular Junction with a neat diagram. Add a note on myasthenia gravis.  
   \(2+8=10\)

2. Describe the synthesis and regulation of thyroid hormones. Add a note on myxedema.  
   \(8+2=10\)

3. Write short notes on:
   \(4\times5=20\)
   
   a. Explain in detail the factors influencing Erythropoiesis.
   b. Explain the synthesis of HCl in the stomach. Add a note on Peptic ulcer disease.
   c. Describe the functions of testosterone.
   d. Counter current multiplier system.

4. Very short answers:  
   \(5\times2=10\)
   
   a. What is secondary active transport? Give an example.
b. What contraceptive methods should be advised to a married couple who comes to a physician to postpone the second pregnancy?

c. A tall person comes to you with huge hands and feet and complains of deficit in the temporal field of vision both sides. What is the diagnosis and explain the reason for such defective field of vision.

d. Explain the pathophysiology of Hemophilia

e. Renal tubular transport of glucose.

**PHYSIOLOGY PAPER – II**
(Cardiovascular System, Respiratory system and Environmental physiology, Neurophysiology-CNS, Special senses and Integrative physiology)

**ANSWER ALL QUESTIONS**
Illustrate your answer with suitable diagrams

**Time: 2 hours**

**Maximum marks: 50**

1. Define blood pressure. Explain the short-term regulation of blood pressure.  
(2+8=10)

2. Name the descending tracts? With the help of a neat diagram explain the corticospinal tract.  
(2+8=10)

3. Write short notes on:
   (4x5=20)
   a. Oxygen hemoglobin dissociation curve.
   b. With the neat diagram explain the ECG in lead II. Explain the ECG changes in myocardial infarction.
   c. Visual pathway and the effect of lesions at different levels.
   d. Explain the functions of Hypothalamus.

4. Very short answers:  
(5x2=10)
   a. Reflex arc
   b. Aphasia
   c. Hypoxic Hypoxia
   d. Referred pain
   e. Dysbarism

BIOCHEMISTRY
BIOCHEMISTRY

GOAL

The broad goal of the teaching of undergraduate students in biochemistry is to make them understand the scientific basis of the life processes at the molecular level and to orient them towards the application of the knowledge acquired in solving clinical problems.

OBJECTIVES

Knowledge

At the end of the course, the student should be able to:

1. Describe the molecular and functional organization of a cell and list its sub cellular components;
2. Delineate structure, function and inter-relationships of bio molecules and consequences of deviation from normal;
3. Summarize the fundamental aspects of enzymology and clinical application wherein regulation of enzymatic activity is altered;
4. Describe digestion and assimilation of nutrients and consequences of malnutrition;
5. Integrate the various aspects of metabolism and their regulatory pathways;
6. Explain the biochemical basis of inherited disorders with their associated sequelae;
7. Describe mechanisms involved in maintenance of body fluid and pH homeostasis;
8. Outline the molecular mechanisms of gene expression and regulation, the principles of genetic engineering and their application in medicine;
9. Summarize the molecular concepts of body defence and their application in medicine;
10. Outline the biochemical basis of environmental health hazards, biochemical basis of cancer and carcinogenesis;
11. Familiarize with the principles of various conventional and specialized laboratory investigations and instrumentation analysis and interpretation of a given data;
12. The ability to suggest experiments to support theoretical concepts and clinical diagnosis.

Skills

At the end of the course, the student should be able to:

1. Make use of conventional techniques/instruments to perform biochemical analysis relevant to clinical screening and diagnosis;
2. Analyze and interpret investigative data;
3. Demonstrate the skills of solving scientific and clinical problems and decision making;
Integration

The knowledge acquired in biochemistry should help the students to integrate molecular events with structure and function of the human body in health and disease.

COURSE CONTENTS

MUST KNOW CATEGORY

Eukaryotic cell structure:
Cellular compartments – cellular environment organisation and composition of eukaryotic cells, functional role of subcellular organelles and membranes.

Carbohydrate chemistry:
Definition, classification and nomenclature of carbohydrates, structure of glucose, biological importance and properties of glucose, fructose, galactose, lactose, maltose, sucrose, ribose starch, inulin, glycogen, aminosugars, deoxy sugars, heteropolysaccharides.

Lipid chemistry:
Definition, classification, nomenclature of lipids, biological importance and properties of saturated and unsaturated fatty acids, triacylglycerol, phospholipids, glycolipids, prostaglandins, leukotrienes, thromboxanes, glycerol, sterols, lipoprotein-structural characteristics, classification and biological importance. Characterisation of lipid, Rancidity, free radicals, lipid peroxidation and antioxidants.

Protein chemistry:
Definition, classification, composition of proteins, aminoacids, their classification and properties, protonic equilibria of amino acids, separatory techniques for amino acids and proteins – biologically important small peptides, conformation of proteins – levels of structural organisation. Plasma proteins, & Structure and functions of immunoglobulin.

Structure – function relationship of proteins:
Oxygen transport proteins – myoglobin structure and function – structural basis of physiological function of hemoglobin – co-operative binding, Bohr effect, role of 2,3 BPG, fetal haemoglobin, modification of Hb structure and disease – glycated haemoglobin, HbS, HbM, HbC, Thalassemias.

Nucleic acids:
Definition, structural description and functions of nucleic acids, their constituents and derivatives in our body. Biologically important nucleotides and their significance – synthetic analogues of purines and pyrimidines of medical importance.

Enzymes:
General characteristics of enzymes, enzyme nomenclature, enzyme kinetics, enzyme inhibition, organisation of multienzyme systems, regulation of enzyme activity in vivo, factors influencing enzyme activity, clinical enzymology. Co-enzymes: Definition, concepts of cosubstrate, second substrate, role of co-enzymes in group transfer reactions, classification and biological significance.

Vitamins:
Definition, classification, chemistry, occurrence, sources, metabolism, daily requirements, functions, deficiency manifestations, of A, D, E, K, Thiamin, Riboflavin, Niacin, Pantothenic acid, Biotin, Folic acid, Cobalamin, Pyridoxin, antivitamins, and hypervitaminosis.
Digestion and absorption:
Mechanism of digestion and absorption in gastrointestinal tract of carbohydrates, lipids, proteins, aminoacids, vitamins, factors influencing digestion and absorption.

Introduction to intermediary metabolism:
Definition, bioenergetics – entropy, free energy, coupled reactions, high energy compounds, oxidation-reduction reactions – definition, redox potential, electron carriers, compartmentalization of metabolic pathways in cells and the biologic advantage of such compartmentalization.

Stages of catabolism of molecules:

i) Break down with no energy trap

ii) Break down with some force energy trap

iii) Final pathway consisting of Citric acid cycle, electron transport chain and oxidative phosphorylation.

Phosphorylation at the substrate level. Description, localization, organization of electron transport and uncouplers of oxidative phosphorylation, basic concepts of mechanism of oxidative phosphorylation, and inhibitors of electron transport chain.

a) Carbohydrates (without stress on structures): An overview and regulatory steps of glycolysis, glycogenesis, glycogenolysis, gluconeogenesis, HMP shunt, uronic acid pathway, interconversion of hexoses, metabolism of fructose and glucose, blood glucose homeostasis, overview of common disorders of carbohydrate metabolism and their clinical significance, diabetes mellitus and relevant biochemical investigations & oral glucose tolerance test.

b) Lipids: Overview of fatty acid synthesis, oxidation, ketosis, metabolism of triacyl glycerol, Phospholipids Prostaglandins, lipoproteins and cholesterol, biochemical basis of atherosclerosis, hyperlipoproteinemias, fatty liver obesity, role of adipose tissue, lipotropic factors and hypolipidemic drugs fatty liver.

d) Integration of metabolism of carbohydrates, lipids and amino acids, common metabolic pathway (TCA cycle).

f) Chemistry, Breakdown of hemoglobin, biochemical basis of jaundice, classification and their importance, bile pigments and their importance; overview of biochemical basis of porphyrias, hepato biliary function tests.

g) Minerals: Sources, daily requirements, absorption, biochemical functions and deficiency manifestations of calcium, phosphorus, iron fluorides, magnesium, copper, zinc, iodine, sodium, potassium and chloride, selenium, chromium, and cobalt.
h) **Nutrition**: Calorie requirements, qualitative and quantitative requirements, specific dynamic action, BMR, factors influencing BMR, respiratory quotient, biological value of proteins, formulation and computation of energy requirements for a medical student, balanced and adequate diets, formulation of diets in health and diseases, protein and protein energy malnutrition, obesity, starvation, role of dietary fibre, prescription of diet for diabetes mellitus, renal failure, protein energy malnutrition and liver failure.

i) Outline of **detoxification mechanisms** in human body.

Methods of investigations of intermediary metabolism; detailed aspects of metabolism of carbohydrates, rare disorders related to metabolism including glycogen storage disease; rare disorders related to lipid metabolism. Detailed step in the breakdown of amino acids and rare inherited disorder related to amino acid metabolism. Food toxins and additives; adulteration of foods, nutrification and fortification of foods; Basic concepts of total parenteral nutrition.knowledge of porphyrias.

**Organ function test:**

a) Constituents in urine, renal functions tests, concept of clearance tests.

b) Regulation of fluid and electrolyte balance, disorders associated with laboratory parameters in diagnosis of fluid and electrolyte disorders. Oral Rehydration solution.

c) Acid base balance, blood buffers, regulation of blood pH, role of erythrocytes, lungs and kidneys in regulation of acid base balance, acidosis, alkalosis of respiratory and nonrespiratory origin, laboratory parameters in diagnosis of acid base disorders.

d) Thyroid function tests.

e) Endocrinology: Mechanism of action and metabolic role of hormones.

**Molecular Biology & Immunology:**

(a) Basic biochemical concept of immunology.

(b) Overview of cell cycle, DNA replication, transcription and protein biosynthesis, mutations, DNA damage and repair mechanisms, blotting techniques. General principles of recombinant DNA technology and its practical applications in medicine. Outline of biochemical basis of Carcinogenesis.

**DESIRABLE TO KNOW CATEGORY**

**Eukaryotic cell structure:**
Structure and functions of biological membrane, liposomes.

**Carbohydrate chemistry:**
Sialic acids, blood group substances, carbohydrates of cell membranes.

**Protein chemistry:**
Structure of amino acids, Sequencing of amino acids

**Structure – function relationship of proteins:**
Collagen structure and function.

**Enzymes:**
Isolation of enzymes, Structure of coenzymes and mechanism of enzyme catalysis.
Vitamins:
Free radicals and antioxidants

Digestion and absorption:
Alterations in mechanisms of digestion and absorption leading on to disease process.

Introduction to intermediary metabolism:
Methods of investigations of intermediary metabolism; detailed aspects of metabolism of carbohydrates, rare disorders related to metabolism including glycogen storage disease; rare disorders related to lipid metabolism. Detailed step in the breakdown of amino acids and rare inherited disorder related to amino acid metabolism.
Foodtoxins and additives; adulteration of foods, nutrification and fortification of foods; Basic concepts of total parenteral nutrition.knowledge of porphyrias.

Organ function test:
Role of radio isotopes in Medicine;
Fetoplacental unit; biochemical tests of fetal maturity and abnormalities.

Molecular Biology & Immunology:
Immunodiagnostic methods, Regulation of genetic expression in eukaryotes
Inhibitors of protein synthesis, post translational modifications, gene therapy.

PRACTICAL SKILLS

1. General properties of carbohydrates and reactions of glucose, fructose, lactose, maltose, starch and dextrins.
4. Abnormal constituents of urine.
5. Analysis of a food mixture.
6. Principles and application of the principle in chromatography, electrophoresis, RIA and ELISA.
8. Working of autoanalyser, blood gas analyser.

At the end of the practical classes in Biochemistry, the student shall be able to:

a) Color reactions of carbohydrates amino acids and the responsible functional groups.

b) Suggest suitable / relevant biochemical investigations for diagnosis/confirmation of a patient with jaundice, acute renal failure, nephrotic syndrome, myocardial infarction, metabolic acidosis, metabolic alkalosis, respiratory acidosis, respiratory alkalosis, glycosuria, hypothyroidism, hyperthyroidism. Dyslipidemia

c) Significance of

(i) Albumin: globulin ratio with the values of total protein and albumin provided.

(ii) Urea and creatinine clearance with the parameters provided, Urine creatinine: Albumin ratio,AST:ALT ratio,etc

(iii) The RF value for any carbohydrate or amino acid from a given chromatogram.
d) Interpret

(i) Normal electrophoretic pattern and pattern related / associated with cirrhosis of liver, nephrotic syndrome, multiple myeloma, mono and polyclonal gammopathies.

(ii) Values obtained after an oral glucose tolerance test in normal and diabetic states.

(iii) Laboratory data in pancreatitis, myocardial infarction, various types of jaundice, acute renal failure, nephrotic syndrome, proteinurias, acidosis, alkalosis, hypo and hyperthyroidism.

e) Mention/list the uses of some of the common instruments like colorimeters, pH meters, urinometer, electrophoretic apparatus etc. used in biochemistry laboratory.

**BIOCHEMISTRY - DISTRIBUTION OF MARKS**

Theory-Two papers of 50 marks each
(One applied question of 10 marks in each paper) 100 marks
Oral (Viva) 20 marks
Practical 40 marks
Internal Assessment (Theory-20; Practical-20) 40 marks
Total 200 marks

**Pass:** In each of the subjects, a candidate must obtain 50 % in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.

**BIOCHEMISTRY THEORY PAPER**

**Paper I** – 50 marks (Biomolecules – structure function correlations, Cell organization; Enzymes, Bioenergetics and Biological oxidation; Body fluids, Fluid Electrolyte and Acid Base balance and associated disorders, Hepatobiliary, Gastric, Pancreatic function tests; Interpretation of Lab. Data; Digestion and absorption of nutrients, metabolism of carbohydrates and lipids, influence of hormones and associated inborn errors. Integration of intermediary metabolism. Biochemistry and diabetes mellitus)

**Time:** 2 hours

Q1. Long Answer Questions: 2 LAQs X 10 marks each (must be structured)

Q2. Short Answer Questions: 4 SAQs X 5 marks each,

Q3. Very Short Answer Question: 5 SAQs X 2 marks each

**Paper II** – 50 marks (Vitamins, Minerals and Nutrition; Instrumentation and techniques used in Biochemistry; Thyroid, Adrenocortical and renal function tests; Interpretation of laboratory data; Xenobiotics, environmental hazards and cancer biology, Metabolism of proteins, amino acids, haemoglobin, Nucleotides, purines and pyrimidines, their regulation and associated inborn errors; Porphyrias; Human genetics, Molecular biology and Immunology)

**Time:** 2 hours

Q1. Long Answer Questions: 2 LAQs X 10 marks each (must be structured)
Q2. Short Answer Questions: 4 SAQs X 5 marks each,

Q3. Very Short Answer Question: 5 SAQs X 2 marks each

Note: LAQ should be from must know area. If LAQ is from a particular section, it should be avoided in short notes. Total marks is 100. 80 marks should be asked from must know area and 20 marks should be asked from desirable to know area.

MODEL QUESTION PAPERS:

BIOCHEMISTRY - PAPER I

(Biomolecules – structure function correlations, Cell organization; Enzymes, Bioenergetics and Biological oxidation; Body fluids, Fluid Electrolyte and Acid Base balance and associated disorders, Hepatobiliary, Gastric, Pancreatic function tests; Interpretation of Lab. Data; Digestion and absorption of nutrients, metabolism of carbohydrates and lipids, influence of hormones and associated inborn errors. Integration of intermediary metabolism. Biochemistry and diabetes mellitus)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours Maximum marks: 50

1. Describe the various types of inhibition of enzyme activity using Lineweaver Burk plot and state how are they distinguished? Name an enzyme inhibitor used as a drug. (6+3+1=10)

2. Define Gluconeogenesis. Mention the substrates for gluconeogenesis. Describe in detail the various steps of gluconeogenesis. Add a note on its regulation. (1+2+4+3=10)

3. Short Answer Questions (4X5=20)
   a. Describe the fluid mosaic model of cell membrane.
   b. Discuss the role of kidney in the maintenance of blood pH.
   c. Discuss the various biochemical investigations in a case of obstructive jaundice.
   d. Digestion and absorption of lipids.

4. Very Short Answer Questions (5X2=10)
   a. Uncouples of oxidative phosphorylation
   b. Renal Glycosuria
   c. Mention two causes of ketogenesis and name one hormone that inhibits ketogenesis.
   d. Von-Gierke’s disease.
   e. Mention the enzymatic and non enzymatic parameters to diagnose acute myocardial infarction.

BIOCHEMISTRY PAPER II

(Vitamins, Minerals and Nutrition; Instrumentation and techniques used in Biochemistry; Thyroid, Adrenocortical and renal function tests; Interpretation of laboratory data; Xenobiotics, environmental hazards and cancer biology, Metabolism of proteins, amino acids, haemoglobin, Nucleotides, purines and pyrimidines, their regulation and associated inborn errors; Porphyrias; Human genetics, Molecular biology and Immunology)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

52
1. Describe the steps of DNA replication and add a note on telomerase.  (8+2=10)

2. Discuss the dietary sources, daily requirement, biochemical functions and deficiency manifestations of ascorbic acid.  (1+1+5+3=10)

3. Short Answer Questions  (4X5=20)
   a. Write in detail about absorption of iron in the gut.
   b. Phenylketonuria.
   c. Factors affecting oxygen dissociation curve of haemoglobin.
   d. PCR and its applications.

4. Very Short Answer Questions  (5X2=10)
   a. Lesch-nyhan syndrome.
   b. Creatinine clearance.
   c. Monoxygenases.
   e. Enumerate the special products of tyrosine.

PRACTICAL EXAM  (TOTAL MARKS=40)

1. Objective Structured Practical Examination (OSPE)

2. Four performance and Six response stations : Total Ten stations

3. Each station carries Four marks (4X10=40)

4. Time allotted for each station for performing/answering is 4 minutes

5. In performance station: 3 marks will be allotted for performing the test and 1 mark will be allotted for a station related viva (3+1=4).

6. The performance stations (4 Nos) shall have tests pertaining to
   1. Urinalysis (normal/abnormal) ---------- 2 stations
   2. AA/protein reactions ----------- 1 station
   3. Carbohydrate reactions ----------- 1 station

7. The response stations (6 Nos) shall have
   • Minimum 3 case scenarios – where student has to justify/explain/interpret the test results/disease process/metabolic derangement, etc., (OGTT, Nephrotic/Nephritic case, lipid disorders, thyroid disorders, PFT, LFT & jaundice, MI and bone disorders)
   • Nutrition: One question shall pertain to vitamin/mineral deficiency, balanced diet.
   • One question on urinometer/pH meter/ colorimeter/electrophoresis apparatus/ chromatography/ serum electrophoresis - Display type.
   • One question on calculation and interpretation of biochemical parameters like glucose, urea, Lipid profile A:G ratio, Protein: Creatinine ratio, AST/ALT ratio.
COMMUNITY MEDICINE INCLUDING HUMANITIES
COMMUNITY MEDICINE INCLUDING HUMANITIES

GOAL

The broad goal of the teaching of undergraduate students in Community Medicine is to prepare them to function as community and first level physicians in accordance with the institutional goals.

OBJECTIVES

Knowledge

At the end of the course, the student should be able to:

1. Describe the health care delivery system including rehabilitation of the disabled in the country;

2. Describe the National Health Programmes with particular emphasis on Maternal and child health programmes, family welfare planning and population control.

3. List epidemiological methods and describe their application to communicable and non-communicable diseases in the community or hospital situation or during emergencies.

4. Apply bio-statistical methods and techniques;

5. Outline the demographic pattern of the country and appreciate the roles of the individual, family, community and socio-cultural milieu in health and disease.

6. Describe the health information systems.

7. Enunciate the principles and components of primary health care and the national health policies to achieve the sustainable developmental goals.

8. Identify the environmental and occupational hazards and their control.

9. Describe the importance of water and sanitation in human health.

10. To understand the principles of health economics, health administration, health education in relation to community.

Skills

At the end of the course, the student should be able to:

1. Use epidemiology as a scientific tool to make rational decisions relevant to the community and individual patient intervention.

2. Collect, analyse, interpret and present simple community and hospital based data.

3. Diagnose and manage common health problems and emergencies at the individual, family and community levels keeping in mind the existing health care resources and in the context of the prevailing socio-cultural beliefs.

4. Diagnose and manage maternal and child health problems and advise a couple and the community on the family planning methods available in the context of the national priorities.
5. Diagnose and manage common nutritional problems at the individual and community level.

6. Plan, implement and evaluate a health education programme with the skill to use simple audio-visual aids.

7. Interact with other members of the health care team and participate in the organisation of health care services and implementations of national health programmes.

8. Appreciate his/her limitations, recognize situations calling for referral to higher centers and be willing to refer patients for further consultations at the appropriate moment to appropriate centers.

COURSE CONTENT

MUST KNOW CATEGORY

History of medicine and evolution of public health:
Various milestones in the history of medicine. Evolution of public health over centuries.

Concepts in Health:
Definition of health; appreciation of health as a relative concept; determinants of health. Characteristics of agent, host and environmental factors in health and disease and the multifactorial etiology of disease. Understanding of various levels of prevention with appropriate examples. Define and interpret various Indices used in measurement of health. Know the current health situation in India - especially the demography, mortality and morbidity profile and the existing health facilities in health services.

Epidemiology:
Use of basic epidemiological tools to make a community diagnosis of the health situation in order to formulate appropriate intervention measures. Epidemiology: definition, concepts and its role in health and disease. Definition of the terms used in describing disease, transmission and control. Natural history of a disease and its application in planning intervention. Modes of transmission and measures for prevention and control of communicable and non-communicable diseases. Principal sources of epidemiological data.

Various types of epidemiological study designs. Definition, calculation and interpretation of the measures of frequency of diseases and mortality. Need and uses of screening tests. Accuracy and clinical value of diagnostic and screening tests (sensitivity, specificity, predictive values). Planning, collecting, analyzing and interpreting data to reach a community diagnosis. Planning and investigation of an epidemic of a communicable disease in a community setting and institution of control measures. Know about the measures of association and criteria of causality.

Epidemiology of specific diseases (Communicable & non-communicable diseases):
The specific objectives of selected communicable diseases of public health importance for which National Disease Control/Eradication Programmes have been formulated are described here. The idea of formulating objectives for a few diseases is to highlight their importance and to emphasis certain learning outcomes.

For the rest of the diseases, the individual teacher would formulate the objectives while drawing the lesson plans.
Extent of the problem, epidemiology and natural history of the disease. Relative public health importance of a particular disease in a given area. Influence of social, cultural and ecological factors on the epidemiology of the diseases. Epidemiology of communicable and non-communicable diseases of public health importance and their control. Control and prevention of communicable and non-communicable diseases by: Diagnosing and treating a case and in doing so demonstrate skills in: Clinical methods including anthropometric measurements, Use of essential laboratory techniques. Selection of appropriate treatment regimes. Follow-up of cases. Preventive measures including immunization. Principles of planning, implementing and evaluating control measures for the diseases at the community level bearing in mind the relative importance of the diseases. Institution of programmes for the education of individuals and communities. Epidemiologic basis of national health programmes. Awareness of the National diseases Control Programmes.

Biostatistics:

The scope and uses of biostatistics. Collection, classification and presentation of statistical data. Analysis and interpretation of data. Obtaining information, computing indices (rates and ratio) and making comparisons. Common sampling techniques, simple statistical methods for the analysis, interpretation and presentation of data, frequency distribution, measures of central tendency, measures of variability. Know about the various tests of significance.

Medical Entomology:

Role of vectors in the causation of diseases. Identifying features of and mode of transmission of vector borne diseases. Methods of vector control with advantages and limitations of each. Mode of action, dose and application cycle of commonly used insecticides.

Environmental Studies and Sanitation:

Reproductive & Child Health (RCH):

Demography & Family Planning:
Definition of demography and family welfare programme. Stages of the demographic cycle and their impact on the population. Definition, calculation and interpretation of demographic indices like birth rate, death rate, growth rate, Fertility rates. Reasons for rapid population growth in India. Need for population control measures and the National Population Policy. Geriatric health and palliative care. Identify and describe the different family planning methods and their advantages and shortcomings. Demonstrate skills in motivating a couple for selecting an appropriate family planning method. Recent advances in contraception.

Health Planning and Management & health care delivery system:

Explain the terms: public health, public health administration, regionalization, comprehensive medical care, delivery of health care, planning management, evaluation. Components of health care delivery: Describe the salient features of the National Health Policy concerning: (a) Provision of medical care; (b) primary health care and Health for All; (c) universal health coverage (d) health manpower development; (e) planned development of health care facilities; (f) encouragement of indigenous systems of medicine. Explain the process of health planning in India by demonstrating awareness of: The health systems and health infrastructure at centre, state and district levels. The inter-relationship between community development block and primary health centre. The organization, functions and staffing pattern of community health centers, primary health centers, rural health centre and sub-centre. The job descriptions of health supervisor (male and female); health workers; village health guide; anganwadi workers traditional birth attendants. The activities of the health team at the primary health centre. Familiarity with management techniques: Define and explain principles of management; explain the three broad functions of management (planning, implementation and evaluation) and how they relate to each other. The components of health care delivery: Appreciate the need for International Health Regulations and Disease Surveillance. be aware of the constitutional provisions for health in India. Enumerate the three major divisions of responsibilities and functions (concerning health) of the union and the state governments. Explain the process of health planning in India by demonstrating awareness of recommendations of different health committees such as Bhore, Mudaliar,etc. Sustainable developmental goals. Appreciate the role of national, international voluntary agencies in health care delivery. Know about the essential drugs

Nutrition:

Common sources of various nutrients and special nutritional requirement according to age, sex, activity, physiological condition. Nutritional assessment of individual, families and the community by selecting and using appropriate; methods such as: anthropometry, clinical, dietary, laboratory techniques. Compare recommended allowances of individual and families with actual intake. Plan and recommend a suitable diet for individuals and families bearing in mind local availability of foods, economic status, etc. Common nutritional disorders: PEM, Vit. A Deficiency, anemia, iodine deficiency disease, fluorosis, food toxin diseases and their control and management. National Programmes& Acts in nutrition like the prevention of food adulteration.

Medical Sociology:

Conduction of clinic-social evaluation of the individual in relation to social, economic and cultural aspects; educational residential background; attitude to health, disease and health services; the individual's family and community. Assessment of barriers to good health, recovery from sickness and to leading a socially and economically productive life. Development of a good doctor-patient relationship. Identification of social factors related to health and disease in the context of urban and rural societies. Role of family in health and disease.

School Health:

**Occupational Health:**

Relate the history of symptoms with the specific occupation including agriculture. Various legislations in relation to occupational health including Employees State Insurance Scheme, Factories act.

**Health Education (Behavioral Change Communication - BCC):**

Communicate effectively with the individuals, family and the community using tools and techniques of information, education, communication. Appreciate barriers to effective communication. Know the various sources of health information. Describe the principles and methods and evaluation of health education. List various methods of health education with their advantages and disadvantages. Select and use appropriate media (simple audio-visual aids) for effective health education. Use every opportunity for health education of the individual, family and the community.

**Mental health:**

Know about the common mental health disorders prevalent in the community, methods to screen and manage at the primary health care level.

**Urban Health:**

Impact of urbanization on health and disease. Common health problems (medical, social, environmental, economic, psychological) of urban slum dwellers. Organisation of health services for slum dwellers. Organisation of health services to address the common health problems in urban areas.

### DESIRABLE TO KNOW CATEGORY

**Concepts in Health:**

Difficulties in measurement of health.

**Epidemiology:**

The derivation of normal values and the criteria for intervention in case of abnormal values. Planning an intervention programme with community participation based on the community diagnosis. Applications of computers in epidemiology. Knowledge about various techniques in qualitative research and operational research techniques.

**Epidemiology of specific diseases (Communicable & non-communicable diseases):**

Training health workers in (i) disease surveillance, (ii) control and treatment, (iii) health education. Managerial skills in the areas of (i) supervision, (ii) collection and compilation of data, (iii) maintenance of records, (iv) transmission of data.

Though the list of diseases is quite long, here are names of some important communicable and non-communicable diseases/conditions which need to be taught. Needless to say, the emphasis on these diseases/conditions will vary from place to place. They are:
Poliomyelitis, Infective hepatitis, ARI, T.B., Vector-borne diseases like malaria, dengue, filariasis, Japanese Encephalitis, scrub typhus, Kala Azar, Rabies, STDs and AIDs, Diarrhoeal diseases, Mental health, Coronary heart disease, Blindness, Diabetes, Accidents, Hypertension, Leprosy.

**Biostatistics:**

Choosing of appropriate controls. Use of statistical tables.

**Medical Entomology:**

Steps of management of a case of insecticide toxicity.

**Environmental Studies and Sanitation:**

Conservation and preservation of forests.

**Demography & Family Planning:**

Organizational, technical and operational aspects of the National Family Welfare Programme and participate in the implementation of Programme. Give guidance for MTP and infertility services.

**Health Planning and Management & health care delivery system:**

Explain the terms: cost-effectiveness, cost-benefit. Medical audit, budgeting. Health system research, operational research

**Nutrition:**

Food adulterants, additives, food standards

**Medical Sociology:**

Anthropology. Qualitative research

**School Health:**

Obtaining participation of the teachers in the school health programme including maintenance of records; defining healthful practices; early detection of abnormalities.

**Occupational Health:**

Identification of the physical, chemical and biological hazards to which workers are exposed while working in a specific occupational environment. Diagnostic criteria of relevant occupational diseases. To suggest preventive measures against these diseases including accident prevention.

**SKILLS**

**Part I: GENERAL SKILLS:**

The student should be able to:

Elicit the clinico-social history to describe the agent, host and environmental factors that determine and influence health of individual and family. Recognize and assist in management of common health problems of the community at the primary health care level. Apply elementary principles of epidemiology in carrying out simple epidemiological studies in
the community. Work as a team members in rendering health care. Carry out health education effectively for the community.

Part II: SKILLS IN RELATION TO SPECIFIC TOPICS:

1. **Communication** - The student should be able to communicate effectively with family members at home, patients at clinics or at homes; individuals, family or a group for health education, peers at work and scientific forums.

2. **Team activity** - Work as a member of the health team; in planning and carrying out field work like school health.

3. **Environmental sanitation** - Collect water samples for microbiological evaluation; chlorination of water; estimate the chlorine demand of water; estimate the residual chlorine of water. Insecticides - their proper storage and use in control of vectors.

4. Communicable and non-communicable diseases (including social problems). Eliciting clinic - social history and examining the patient for diagnosis and treatment. Collection of appropriate material for microbiological, pathological or biochemical tests for locally prevalent health conditions. Fixing and staining and examining smears - peripheral blood smear for malaria and filariasis; sputum for AFB; slit skin smears for leprosy; Hb estimation; urine and stool examination. Assessing the severity and/ or classifying dehydration in diarrhea, upper respiratory tract infection, dog bite, leprosy. Adequate and appropriate treatment and follow-up of leprosy, malaria, filariasis, rabies, upper respiratory tract infection, diarrhea and dehydration. Advice on the prevention and prophylaxis of common diseases - vaccine preventable diseases, tetanus, malaria, filariasis, rabies, cholera, typhoid, intestinal parasites. Use of proper screening methods in early diagnosis of common diseases. Take necessary steps in disease outbreak/ epidemics/ natural disasters - investigation of epidemic, food poisoning; notification; organizing medical care following disasters.

5. **Maternal and Child Health** - Antenatal - examination of the mother; application of the risk approach in antenatal care. Intratnatal - conduction a normal delivery; early recognition of danger in intratnal period; referral of cases requiring special care. Postnatal - assessment of the mother and newborn; advice on appropriate family planning method; promotion of breast feeding; advice on weaning. Assessment of growth and development of the child - use of the 'WHO growth card'; recording important anthropometric assessments of the child; giving immunization to the child; immunization against vaccine preventable diseases, identifying high risk infants.

6. **Epidemiology and Statistics** - Selecting a sample for study using an appropriate sampling technique. Calculation of sample size for prevalence studies. Apply appropriate tests of significance to make a correct inference. Simple analysis and presentation of data with use of basic statistics.

8. **Health Care of the Community** - Motivating community to participate in health care. Arranging intersectoral coordination where necessary. Working in liaison with other agencies involved in health care in various National Health Programmes.

10. Family Planning: Advice on appropriate methods. Inserting an intra-uterine contraceptive device in a PHC.

11. Managerial: Organise antenatal and under-five clinic.

COMMUNITY MEDICINE INCLUDING HUMANITIES - DISTRIBUTION OF MARKS

Theory : Two papers of 60 marks each 120 marks
(includes problem solving, applied aspects of management at primary level including essential drugs, occupational (agro based) diseases, rehabilitation and social aspects of community).
Oral (Viva) 10 marks
Practical evaluation 30 marks
Internal assessment 40 marks
(Theory -20; Practical-20)
Total 200 marks

Pass: In each of the subjects a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals

COMMUNITY MEDICINE THEORY PAPER

Paper I – 60 marks (Gen. Epidemiology, Biostatistics, Sociology, Nutrition, Demography, Environmental Health)

Time: 3 hours

Section A

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Section B

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Paper II – 60 marks (Epidemiology of Communicable and Non-communicable diseases, Occupational Health, Maternal and Child Health, Family Welfare, Public Health Administration, Health Education)

Time: 3 hours

Section A

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Section B

Q1. Long Answer Question 10 Marks (must be structured)
Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Note: Long Answer Questions (LAQ) should be from must know area. Total number of short notes is 16 of which 4 or 5 should be from desirable to know areas.

MODEL QUESTION PAPERS:

COMMUNITY MEDICINE PAPER I
(Gen. Epidemiology, Biostatistics, Sociology, Nutrition, Demography, Environmental Health)

ANSWER ALL QUESTIONS
Each Section to be answered in separate Answer Book
Illustrate your answer with suitable diagrams

Time: 3 hours
Maximum marks: 60

SECTION A

1. Briefly describe the natural history of disease. Discuss the levels of prevention using diabetes as an example. (3+7 = 10)

2. Write short notes on: (4 x 5 = 20)
   a) Sampling techniques
   b) Audio-visual aids to make lecture more effective
   c) Incubation period and its uses
   d) Community diagnosis

SECTION B

3. What is a ‘balanced diet’. Describe the various methods of assessment of nutritional status in children. (2+8 = 10)

4. Write short notes on: (4 x 5 = 20)
   a) Sensitivity of a screening test
   b) Bacteriological quality of drinking water
   c) Role of family in health and disease
   d) Integrated vector control measures against aedes mosquitoes

COMMUNITY MEDICINE PAPER II
(Epidemiology of Communicable and Non-communicable diseases, Occupational Health, Maternal and Child Health, Family Welfare, Public Health Administration, Health Education)

ANSWER ALL QUESTIONS
Each Section to be answered in separate Answer Book
Illustrate your answer with suitable diagrams

Time: 3 hours
Maximum marks: 60

SECTION A

1. Describe the problem of acute respiratory infections (ARI). List the agent, host and
environmental factors for the control of ARI among children aged 2 months to 5 years.

(10)

2. Write short notes on: (4 x 5 = 20)
   a) Management of diarrhea among children with some dehydration
   b) Prevention of rheumatic fever and rheumatic heart disease
   c) Sickness benefit under E S I
   d) Role of health education in school health

SECTION B

3. What is the importance of perinatal mortality rate (PMR)? In the context of developing countries what are the social & biological causes of PMR? What are the measures to reduce PMR? (2+4+4=10)

4. Write short notes on: (4 x 5 = 20)
   a) Pearls Index
   b) Network analysis
   c) Risk factors for hypertension
   d) Principles of Primary Health Care

PRACTICAL EVALUATION (30 MARKS)

- 5 spotters - 5 marks
- 2 statistical/ epidemiological exercises - 10 marks
- 1 clinico-psycho-social case - 15 marks
PATHOLOGY
PATHOLOGY

GOAL
The broad goal of the teaching of undergraduate student in Pathology is to provide the students with a comprehensive knowledge of the mechanisms and causes of disease, in order to enable him/her to achieve complete understanding of the natural history and clinical manifestations of disease.

OBJECTIVES
Knowledge
At the end of the course, the student should be able to:

1. Describe the structure and ultrastructure of a sick cell, mechanisms of cell degeneration, cell death and repair and be able to correlate structural and functional alterations.

2. Explain the pathophysiological processes which govern the maintenance of homeostasis, mechanisms of their disturbance and the morphological and clinical manifestations associated with it.

3. Describe the mechanisms and patterns to tissue response to injury such that she/he can appreciate the pathophysiology of disease processes and their clinical manifestations.

4. Correlate normal and altered morphology (gross and microscopic) of different organ systems in common diseases to the extent needed for understanding of disease processes and their clinical significance.

Skills
At the end of the course, the student should be able to:

1. Describe the rationale and principles of technical procedures of the diagnostic laboratory tests and interpretation of the results;

2. Perform the simple bed-side tests on blood, urine and other biological fluid samples;

3. Draw a rational scheme of investigations aimed at diagnosing and managing the cases of common disorders;

4. Understand biochemical/physiological disturbances that occur as a result of disease in collaboration with pre clinical departments.

Integration
At the end of training he/she should be able to integrate the causes of disease and relationship of different etiological factors (social, economic and environmental) that contribute to the natural history of diseases most prevalent in India.

COURSE CONTENTS
MUST KNOW CATEGORY

GENERAL PATHOLOGY
Cell Injury:

Cause and mechanism of ischemic, Toxic, Free-radical induced injury, Apoptosis, Reversible cell injury: Types, morphology, hyaline and fatty change. Necrosis and gangrene, Dystrophic and metastatic Calcification. Pigment deposition such as melanin, bilirubin, hemosiderin and carbon.

Inflammation and Repair:

Acute inflammation: Features, Causes, vascular, cellular events and morphological variants, inflammatory cells and mediators. Chronic inflammation: Causes, types, non-specific and Granulomatous with examples. Wound healing and repair by primary and secondary union and factors modifying them. Healing at specific sites like skin and bone.

Hemodynamic disturbances:

Growth Disturbance and Neoplasia:

Immunopathology:

Genetic disorders:

Basic concepts of genetic disorders and some common examples. Down's syndrome, Turner's syndrome and klinefelter's Syndrome

Infectious Diseases:

Miscellaneous Disorders:

Hematopathology:

**SYSTEMIC PATHOLOGY**

**Cardiovascular Pathology:**

Rheumatic Heart Disease & Infective endocarditis, Hypertension, Atherosclerosis and Ischemic heart Disease

**Respiratory Pathology:**

**Pathology of Gastrointestinal tract:**

**Liver and Biliary Tract pathology:**

**Lymphoreticular Pathology:**

**Urinary tract pathology:**

**Pathology of Reproductive System:**

Pathology of Musculoskeletal system:

Osteomyelitis – Acute, chronic, tuberculosis. Metabolic bone disease – Rickets, Osteomalacia, Osteoporosis. Tumors: Classification, Osteosarcoma, Chondrosarcoma, Giant cell tumor, Ewing's sarcoma, Metastatic bone tumors.

Endocrine Pathology:

Non neoplastic lesions of thyroid: Thyroid function tests, Iodine deficiency, Goitre, Autoimmune thyroiditis, Myxedema and thyrotoxicosis, Tumors of thyroid, multiple endocrine neoplasia, Adrenals - Hyperfunction and hypofunction, Tumors. Parathyroid hyperplasia and adenoma, Pituitary hyperfunction tumors

Neuropathology:

CSF and its disturbance, inflammatory disorders: Meningitis and Brain abscess. CNS tumors: Astrocytoma and Meningioma: classification

Miscellaneous:

Skin tumors like Melanoma, Basal cell carcinoma, Squamous cell carcinoma.

DESIRABLE TO KNOW CATEGORY

General Pathology:

Systemic Pathology:

PRACTICAL SKILLS

Acquisition of Skills:

a) Be able to collect, store and transport materials for various pathological tests including histopathology, cytopathology, hematopathology, Blood bank and clinical pathology in a proper manner.

b) Describe accurately and arrive at a logical diagnosis of common macroscopic.

c) Specimens (gross appearance) such as pneumonia, cirrhosis, gangrene etc.

d) Interpret and arrive at a conclusive diagnosis in the microscopic analysis of common diseases like tuberculosis, carcinoma, acute inflammation etc.

e) Perform with accuracy and reliability various hematological procedures such as Hemoglobin estimation, Total and differential leucocyte count, peripheral smear staining and reporting.

f) Calculate red cell indices and interpret the significance.

g) Perform independently complete examination of urine and detect abnormal findings and interpret the results.

h) Perform independently grouping of blood.

i) Be aware of the procedure for common tests like Bleeding time, Clotting time, ESR, PCV, bone marrow examination, semen analysis and interpret abnormal findings.

j) Interpret abnormal laboratory (biochemical, hematological and serological) values of common diseases.

k) Adopt universal precautions for self protection against HIV and hepatitis.

Practicals

1. One third of the allotted practical hours will be devoted to:

   a) Perform a complete urine examination and detect abnormalities and correlate clinically.

   b) Perform with accuracy and reliability various hematological procedures such as Hemoglobin estimation, Total and differential leucocyte count, peripheral smear staining and reporting and blood grouping.

   c) Observing or performing under guidance tests like bleeding time, Clotting time, ESR, PCV, bone marrow examination, semen analysis and interpret abnormal findings.

2. One third of the practical hours allotted should be devoted to Identify and interpret gross and microscopic feature of:

   a) Acute inflammation like acute appendicitis, pneumonia, meningitis
   b) Chronic cholecystitis
   c) Granulomatous inflammation like tuberculosis
   d) Granulation tissue and Ulcer
   e) Typhoid, tuberculous and amebic ulcers
   f) Common infections like Leprosy, Malaria, Rhinosporidiosis, Hydatid disease, Actinomycosis, Mycetoma, Molluscum contagiosum
g) Fatty liver, Amyloidosis, Venous congestion of lung, liver and spleen
h) Types of necrosis
i) Common benign and malignant tumors like Squamous cell carcinoma, Basal cell carcinoma, Adenoarccinoma, Hemangioma, Lipoma, Melanoma, metastatic tumors etc
j) Common systemic diseases like Cirrhosis, Pyelonephritis, Peptic ulcer, Rheumatic Heart Disease, Bronchiectasis, Osteomyelitis
k) Specific tumors of various organs like Cervical cancer, Uterine leiomyoma, Seminoma, Osteosarcoma etc

3. One third of the allotted practical hours to be devoted to

a) Discussion of case studies based on the actual clinical and laboratory findings of patients along with gross and microscopic findings wherever applicable to learn clinicopathological correlation.

b) Observation of post mortem examination if undertaken and discuss the clinicopathological correlation. In case clinical post mortems are not available then got-up specimens may be arranged to enable students to appreciate such cases.

PATHOLOGY - DISTRIBUTION OF MARKS

Theory-Two papers of 40 marks each
(One applied question of 10 marks in each paper) 80 marks
Oral (Viva) 15 marks
Practical 25 marks
Internal assessment (Theory-15; Practical-15) 30 marks
Total 150 marks

Pass: In each of the subjects, a candidate must obtain 50 % in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.

PATHOLOGY THEORY PAPER

Paper I – 40 marks (General Pathology 20 marks and Haematology 20 marks)

Time: 2 hours

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Paper II – 40 marks (Systemic Pathology: CVS, RS, GIT, Hepatobiliary system -20 marks and Systemic pathology: Other systems – 20 marks)

Time: 2 hours

Q1. Long Answer Question-10 Marks

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Note: Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 12 of which 2 or 3 should be from desirable to know areas.
MODEL QUESTION PAPERS:

PATHOLOGY PAPER I
(General Pathology and Haematology)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours  Maximum marks: 40

1. A 65 old female from “Old age home” brought with severe weakness and spastic paresthesia in lower limbs. On examination she had severe pallor, atrophic glossitis and mild yellowish discoloration of skin. Peripheral smear examination showed presence of macro-ovulocytes.

   a) What is the most probable diagnosis and why?
   b) Describe the Etiopathogenesis of disease in detail.
   c) Describe laboratory findings.  

   (2+4+4=10)

2. Write Short Notes on:  
   a. Granulomatous Inflammation
   b. Myelodysplastic Syndrome
   c. Grading & staging of tumor
   d. Down's Syndrome
   e. Hemophilia
   f. Types of necrosis

   (6 X 5 = 30)

PATHOLOGY PAPER II
(Systemic Pathology)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours  Maximum marks: 40

1. A 50 year old male, chronic smoker, presented to casualty with sudden onset of chest pain, sweating, tachycardia and giddiness. ECG showed ST-segment elevation.

   a) What is your probable diagnosis and why?
   b) Write the etiopathogenesis of the disease.
   c) Write briefly about the morphology of the affected organ.
   d) Mention Laboratory investigation findings.  

   (2+3+3+2=10)

2. Write Short Notes on:  
   a. Small cell carcinoma Lung
   b. Cholelithiasis
   c. Meningioma
   d. Giant Cell tumor of Bone
   e. Choriocarcinoma
   f. Hashimoto's Thyroiditis

   (6 X 5 = 30)

PRACTICAL EXAM PATTERN: 25 MARKS

Hematology exercises (TC, DC, Hb / Blood group)  –  10 marks
Clinical pathology (Urine exam)  –  5 marks
MICROBIOLOGY
MICROBIOLOGY

GOAL

The broad goal of the teaching of undergraduate students in Microbiology isto provide an understanding of the natural history of infectious diseases inorder to deal with the etiology, pathogenesis, laboratory diagnosis, treatment and control of infections in the community as a physician of first contact.

OBJECTIVES

Knowledge

At the end of the course, the student should be able to:

1. State the infective microorganisms of the human body and describe the host parasite relationship.

2. List pathogenic microorganisms (bacteria, viruses, parasites, fungi) and describe the pathogenesis of the diseases produced by them.

3. State or indicate the modes of transmission of pathogenic and opportunistic microorganisms and their sources, including insect vectors responsible for transmission of infection.

4. Describe the mechanisms of immunity to infections.

5. Acquire knowledge on suitable antimicrobial agents for treatment of infections and scope of immunotheraphy and different vaccines available for prevention of communicable diseases.

6. Apply methods of disinfection and sterilization to control and prevent hospital and community acquired infections.

7. Recommend laboratory investigations regarding bacteriological examination of food and water.

8. Understand the relevance of standard precautions and biomedical waste management, and their practices.

Skills

At the end of the course, the student should be able to:

1. Plan and interpret laboratory investigations for the diagnosis of infectious diseases and to correlate the clinical manifestations with the etiological agent.

2. Identify the common infectious agents with the help of laboratory procedures and use antimicrobial sensitivity tests to select suitable antimicrobial agents.

3. Perform commonly employed bed-side techniques and microscopy for Gram stain, AFB stain and stool for ova and cyst.

4. Identify malarial and filarial parasites in a blood film.
5. Identify microscopic appearance of common fungi causing infections.

6. Use the appropriate method to collect, preserve and transport clinical materials for microbiological investigations.

7. Appropriate practice of standard precautions (e.g., steps of hand washing, skin preparation etc)

Integration

The student should understand infectious diseases of national importance in relation to the clinical, therapeutic and preventive aspects by horizontal or vertical integration.

COURSE CONTENTS

MUST KNOW CATEGORY

General Microbiology:

Immunology:

Host defence mechanisms (Immunity to infection). Structure and functions of Immune system. Antigen (antigens as vaccines) and antibody. Principles and applications of antigen and antibody reactions, functions of complement. Normal immune response. Hypersensitivity, Immunodeficiency, and Autoimmunity (teaching to be integrated with department of Pathology).

Systematic Bacteriology:

Virology:

Parasitology:

General concepts & definition of key terms and classification of parasites causing important human infections, including parasitic infections prevalent in India. Immunity and laboratory

Mycology:

Applied Microbiology:

DESIRABLE TO KNOW CATEGORY

General Microbiology:
Conventional and recent advances in diagnostic microbiology

Immunology:
Tumor immunology, Transplantation immunology

Systematic Bacteriology:
Nonsporing Anaerobes (Bacteroides), Burkholderia cepacia and pseudomallei, Actinomycetes, Bacillus anthracis, Campylobacter, Helicobacter pylori. Atypical Mycobacteria causing human infections.

Virology:
Opportunistic viral infection – Epstein-Barr virus and Cytomegalovirus. Viruses of epidemic importance as applied to India (Kyasanur forest disease (KFD) and Crimean–Congo haemorrhagic fever (CCHF).

Parasitology:

Mycology:
Rhinosporidiosis, Penicilliosis, Histoplasmosis

PRACTICAL SKILLS

MICROBIOLOGY - DISTRIBUTION OF MARKS

Theory - Two papers of 40 marks each
(One applied question of 10 marks in each paper) 80 marks
Oral (Viva) 15 marks
Practical 25 marks
Internal assessment (Theory-15; Practical-15) 30 marks
Total 150 marks

Pass: In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.

MICROBIOLOGY THEORY PAPER

Paper I – 40 marks (General Microbiology 10 marks, Immunology 10 marks and Systematic Bacteriology 20 marks)

Time: 2 hours

Q1. Long Answer Question 10 Marks

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Paper II – 40 marks (Applied Microbiology 10 marks, Parasitology 10 marks, Virology 10 marks, Mycology 10 marks)

Time: 2 hours

Q1. Long Answer Question-10 Marks

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Note: Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 12 of which 2 or 3 should be from desirable to know areas.
MODEL QUESTION PAPERS:

MICROBIOLOGY PAPER I
(General Microbiology, Immunology and Systematic Bacteriology)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours Maximum marks: 40

1. Enumerate bacteria that invade the intestinal epithelium. Discuss the pathogenesis and laboratory diagnosis of enteric fever. (2 + 4 + 4 = 10)

2. Write short notes on:
   a) Role of capsule in bacterial virulence
   b) Mechanisms of antibiotic resistance in bacteria
   c) Role of antibodies in host defence mechanism.
   d) Antigen and host cell interactions.
   e) Treponemal antibody tests to confirm syphilis.
   f) Laboratory diagnosis of pulmonary tuberculosis

   (6 x 5 = 30)

MICROBIOLOGY PAPER II
(Parasitology, Virology, Mycology and Applied Microbiology)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours Maximum marks: 40

1. An 8 year old boy presented with acute onset of fever, headache and altered sensorium for the past 2 days. On physical examination, his temperature was 102°F, he was confused, agitated and had nuchal rigidity. LP was done and CSF was sent for laboratory investigations. CSF was cloudy with polymorphonuclear leucocytosis >100 cells/µl, and decreased glucose, 35mg/dL with increased protein, 0.50mg/dL.

   a) What is your probable diagnosis?
   b) List the agents that can cause this condition in different age groups.
   c) Describe some rapid and conventional methods for etiological diagnosis of this condition in the laboratory?
   d) List the vaccines that can prevent this condition in children. (1 + 2 + 4 + 3 = 10)

2. Write short notes on:
   a) Strategies and tests for serodiagnosis of HIV.
   b) Epidemiology of influenza virus infections.
   c) Pathogenesis and laboratory diagnosis of Cryptococcal meningitis.
   d) Common dimorphic fungi causing human infections.
   e) Draw a neat labelled diagram of the life cycle of Plasmodium falciparum in man.
   f) Pathogenesis and laboratory diagnosis of hydatid disease in man.

   (6 x 5 = 30)

PRACTICAL EXAM (Total marks – 25)

1. Gram stain - 5 marks
2. ZN Stain - 5 marks
3. Stool examination - 5 marks
4. Identification of Fungi (Prepared LPCB with the fungal growth on SDA culture bottle) - 2 marks
5. Problem Solving Exercise (Applied Microbiology) - 8 marks (4X2=8 marks)
PHARMACOLOGY

GOAL

The broad goal of the teaching of undergraduate learners in Pharmacology is to inculcate a rational and scientific basis of therapeutics.

OBJECTIVES

Knowledge

At the end of the course, the student should be able to:

1. Describe the pharmacokinetics and pharmacodynamics of essential and commonly used drugs.

2. List the indications, contraindications, interactions and adverse reactions of essential and commonly used drugs.

3. To select and use an appropriate drug in a particular disease with consideration to its efficacy, safety and cost for individual needs and mass therapy under national health programs.

4. Describe the pharmacokinetic basis, clinical presentation, diagnosis and management of common poisoning and their specific antidotes.

5. Integrate the concept of rational drug therapy in clinical pharmacology.

6. Understand the concept of 'Essential Drugs' and their utilization in different health care settings (primary, secondary and tertiary).

7. List the drugs of addiction and recommend the management.

8. To prescribe drugs rationally in special medical situations such as pregnancy, lactation, extremes of age, hepatic and renal failure.

9. Know the ethics and basics of development and introduction of new drugs.

Skills

At the end of the course, the learner should be able to:

1. Prescribe drugs rationally for common ailments, diseases covered under national health programs and emergency medical conditions.

2. To recognize, report, manage and prevent adverse drug reactions.

3. Observe experiments designed for study of effects of drugs, bioassay and interpret the experimental data on animals (using Computer Assisted Learning).

4. Critically appraise the information on common drug formulations.

5. To implement the concept of essential medicines in various health care settings.
6. To communicate with the patients regarding optimal use of drugs and devices.

Integration

Practical knowledge of use of drugs in clinical practice will be acquired through integrated teaching with clinical, pre and para-clinical departments. (e.g.) Diabetes mellitus (DM).

COURSE CONTENT

MUST KNOW CATEGORY

General Pharmacology:

Autonomic Pharmacology:

Autacoids and related drugs:

Central Nervous System:

Antiepileptic drugs – Classification, pharmacological actions, uses, adverse effects, contraindications and selection of appropriate drug for various types of epilepsy. Sedative & Hypnotics – Classification, pharmacological actions, uses, adverse effects and contraindications, Management of Insomnia. General anaesthetics – Cardinal features, merits and demerits of commonly used anesthetics, drug interactions, balanced anaesthesia, neuroleptanalgesia, dissociative anaesthesia and pre-anaesthetic medication. Local anaesthetic agents – Pharmacological actions, adverse drug reactions, indications and management of complications. Opioid analgesics – Opioid receptors and their subtype, classification, pharmacological actions, indications, contraindications, adverse effects and drug interactions of commonly used agents, Management of opioid poisoning and deaddiction. Non-Steroidal Anti-Inflammatory Drugs (NSAIDs) – Classification, pharmacological actions, indications, contraindications, adverse effects and drug interactions of commonly used drugs, Management of overdose and toxicity. Pharmacology of drugs used in the treatment of rheumatoid arthritis and gout. Drugs used in the treatment of
Parkinson’s disease – Classification, indications, contra-indications, adverse effects, drug interactions and management of drug induced parkinsonism. Pharmacology of ethanol and management of methanol poisoning. Pharmacology of drugs used for psychosis, anxiety, depression, and manic depressive illness. Drugs of addiction, abuse, dependence and principles of deaddiction of commonly abused agents like alcohol, opioids, cocaine, cannabinoids, etc.

**Cardiovascular system:**

**Drugs affecting blood and blood formation:**

**Respiratory system:**

Antiasthmatic drugs - Classification, mechanism of action, common side effects, contraindications, drug interactions and management of asthma based on severity. Drug delivery devices used in asthma. Pharmacology of Antitussives, expectorants and mucolytic agents.

**Gastro-intestinal system:**

Drugs for peptic ulcer - Classification, mechanism of action, uses, adverse drug reactions, contra-indications. Pharmacotherapy of GERD. Anti-H.pylori drugs. Antiemetic and prokinetic drugs - mechanism of action, uses, side effects and adjuvant antiemetics. Pharmacology of drugs used in constipation and diarrhea, principles for using ORS. Drug therapy of inflammatory bowel diseases and Irritable bowel syndrome.

**Drugs acting on Endocrine System:**

**Chemotherapy:**

Toxicology:

General principles in the management of poisoning including snake bite and insect stings. Chelating agents and management of heavy metal poisoning. Management of over dosage of commonly used therapeutic agents and their antidotes.

Miscellaneous:

DESIRABLE TO KNOW CATEGORY

General Pharmacology:

Drugs and drug combinations that are banned in India. Molecular mechanism of drug action. Drug regulation & drug acts, legal aspects, inventory control. Drug dose relationships and basic principles of bioassay and biostandardisation. Pharmacoeconomics.

Autonomic Pharmacology:

Drugs acting on autonomic ganglia

Autacoids and related drugs:

Pharmacology of platelet activating factor and bradykinin. Drugs for vertigo.

Central Nervous System:

Cardiovascular system:

Drugs affecting blood and blood formation:

Hypolipidaemic drugs - Classification, mechanism of action, indications and adverse drug reactions.

Respiratory system:

Management of COPD.

Gastro-intestinal system:

Drugs acting on Endocrine System:

**Chemotherapy:**

Newer antimicrobial agents

**Miscellaneous:**

**PRACTICAL SKILLS**

**PHARMACOLOGY - DISTRIBUTION OF MARKS**

Theory-Two papers of 40 marks each
(Containing one question on clinical therapeutics) 80 marks
Oral (Viva) 15 marks
Practical 25 marks
Internal assessment (Theory-15; Practical-15) 30 marks
Total 150 marks

**Pass:** In each of the subjects, a candidate must obtain 50 % in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.

**PHARMACOLOGY THEORY PAPER**

**Paper I – 40 marks**

1) General Pharmacology - 10 marks
2) Autonomic Nervous System - 10 marks
3) Cardiovascular System - 10 marks
4) Blood / Autacoids / Respiratory System - 10 marks.

**Note for paper setter:**

- One LAQ can be from any of 1, 2, 3 or 4.
- If LAQ is from 1, 2, 3 or 4, it should not be included in SAQ section.
- If LAQ is not from 1, 2, 3 or 4, two SAQs can be included from the respective section.

**Time:** 2 hours
Q1. Long Answer Question 10 Marks

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Paper II – 40 marks

1) Chemotherapy - 15 marks
2) Drugs acting on Central Nervous system - 10 marks
3) Hormones and related drugs – 10 marks
4) Gastrointestinal drugs / Miscellaneous - 5 marks.

Note for paper setter:

- One LAQ can be from 1, 2 or 3
- If LAQ is from 1, then only one SAQ should be asked from 1.
- If LAQ is not from 1, three SAQs can be included from 1.
- If LAQ is from 2 or 3, it should not be included in SAQ section.
- If LAQ is not from 2 or 3, two SAQs can be included from the respective topic.
- One SAQ can be included from 4.

Time: 2 hours

Q1. Long Answer Question-10 Marks

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Note: Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 12 of which 2 or 3 should be from desirable to know areas.

MODEL QUESTION PAPERS:

PHARMACOLOGY PAPER I

(General pharmacology, autonomic nervous system, cardiovascular system, blood, autacoids and respiratory system)

ANSWER ALL QUESTIONS

Illustrate your answer with suitable diagrams

Time: 2 hours

Maximum marks: 40

1. Classify antihypertensive drugs. Discuss the mechanism of action, uses and adverse effects of "Sartans". Explain the pharmacological basis of any two commonly used drugs in hypertensive emergency. (3+1+2+2+2=10)

2. Short notes: (6 x 5 = 30)
   a) Define plasma half-life and its clinical significance.
   b) Theophylline.
   c) Pharmacological management of organophosphorus poisoning.
   d) Write briefly on phase II biotransformation reactions with suitable examples.
   e) 5HT3 antagonists.
   f) Pharmacotherapy of benign prostatic hypertrophy.
1. Classify anti-tubercular drugs. Discuss in detail the mechanism of action, uses and adverse effects of any one first line anti-tubercular drug. Add a note on DOT’s regimen.

(2+2+2+2+2=10)

2. Short notes:

(6 x 5 = 30)

a) List any two SSRI drugs and brief the advantages of SSRI over Tricyclic antidepressants (TCA).

b) Sodium valproate

c) DPP-4 inhibitors

d) Briefly discuss the adverse effects and contraindications of glucocorticoids.

e) Pharmacotherapy of constipation.

f) Enumerate any four commonly used aminoglycosides and list the uses and adverse effects

PRACTICAL - MARKS (25)

Clinical Pharmacology Exercise (Part A)

1. Prescription Writing+ spotters. (3+2)
2. CCR Exercises/ problem solving/ toxicology.(5)
3. Pharmacoeconomic Exercise/ Dosage calculation/ Clinical Pharmacokinetic Exercises/ ADR reporting. (5)

Experimental Pharmacology (Part B)

1. Computer Assisted Learning (Major & Minor). (5)
2. Patient doctor Communication /injection techniques. (5)
FORENSIC MEDICINE INCLUDING TOXICOLOGY
FORENSIC MEDICINE INCLUDING TOXICOLOGY

GOAL

The broad goal of the teaching of undergraduate students in Forensic Medicine is to produce a physician who is well informed about medicolegal responsibilities in practice of medicine. He/She will also be capable of making observations and inferring conclusions by logical deductions to set enquiries on the right track in civil and criminal matters and connected medicolegal problems. He/She acquires knowledge of law in relation to medical practice, medical negligence and respect for codes of medical ethics.

OBJECTIVES

Knowledge

At the end of the course, the student should be able to:

1. Identify the basic medicolegal aspects of hospital and general practice.
2. Define the medicolegal responsibilities of a general physician while rendering community service either in a rural primary health centre or an urban health centre.
3. Appreciate the physician's responsibilities in civil and criminal matters and respect for the codes of medical ethics.
4. Diagnose, manage and identify also medicolegal aspects of common acute and chronic poisonings.
5. Describe the medicolegal aspects and findings of post-mortem examination in case of death due to sudden natural and common unnatural conditions and poisonings.
6. Detect occupational and environmental poisoning, prevention and epidemiology of common poisoning and their legal aspects particularly pertaining to Workmen's Compensation Act.
7. Describe the general principles of analytical toxicology.
8. Medical jurisprudence in view of the Consumer Protection Act – wherein doctors have been covered under its ambit. They have both rights as well as responsibilities. Under medical insurance acts of negligence covered as well as rights for effective service delivery.

Skills

At the end of the course, the student should be able to:

1. Make observations and logical inferences in order to initiate enquiries in civil and criminal matters and medicolegal problems.
2. Examine and issue statutory certificates and medicolegal reports.
3. Diagnose and treat common emergencies in poisoning and manage chronic toxicity.
4. Make observations and interpret findings at postmortem examination.
5. Observe the principles of medical ethics in the practice of his profession.

Integration

Department shall provide an integrated approach towards allied disciplines (Pathology, Obstetrics & Gynaecology, Radiology, Forensic Sciences, Hospital Administration and medicolegal issues of other departments) to impart training regarding medicolegal responsibilities of physicians at all levels of health care. Integration with relevant disciplines will provide scientific basis of clinical toxicology e.g. medicine, pharmacology etc.
COURSE CONTENTS

MUST KNOW CATEGORY

DESIRABLE TO KNOW CATEGORY

PRACTICAL SKILLS

Able to perform independently: (1) Proper documentation and intimation of birth and death to appropriate authority; (2) Diagnose and manage common acute and chronic poisonings; (3) Age estimation from bones, x-rays and dentition (mock exercise); (4) Examination of injuries, weapons and report writing (mock exercise); (5) Examination of an alcohol intoxicated person and report writing (mock exercise).

Able to Assist: (1) Prepare dying declaration; (2) Give evidence in a court of law as an expert witness; (3) Collect and do proper labeling, preservation and dispatch of medicolegal specimens; (4) Perform the medico-legal duties in case of poisoning; (5) Examination of victim and accused in sexual offences and report writing (mock exercise); (6) Identify and comment on specimen of poisons; (7) Identify and comment of wet specimens.

Observe: Ten medico-legal autopsies and enter the reports in practical record.

Internal assessment (Theory-10 marks; Practical-10 marks) 20 marks
Total 100 marks

**Pass:** In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including oral and internal assessment (Theory) and minimum of 50% in Practicals / clinicals and internal assessment (Practicals).

**FORENSIC MEDICINE INCLUDING TOXICOLOGY – THEORY PAPER**

Total 40 marks (Forensic Medicine & Forensic Psychiatry 20 marks, Medical Jurisprudence 10 marks Toxicology 10 marks).

**Time:** 2 hours

Q1. Long Answer Question 10 Marks.

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks).

**Note:** Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 6 of which 1 or 2 should be from desirable to know areas.

**MODEL QUESTION PAPER:**

**FORENSIC MEDICINE**

**ANSWER ALL QUESTIONS**

Illustrate your answer with suitable diagrams

**Time:** 2 hours **Maximum marks:** 40

1. A 16-year old unmarried girl was found hanging in her home from a ceiling fan with the help of a nylon dupatta, the ligature mark was found over anterior aspect of the neck, running obliquely to merge with the hair line posteriorly. Write about the types of hanging, causes of death and postmortem appearance in the above case. **(2+2+6= 10)**

2. Write short notes on: **(6x5=30)**
   a) Punishment for rape as per Criminal Amendment Act 2013.
   b) Plumbism
   c) Civil and Criminal Responsibilities of a Mentally ill person
   d) Duties of a doctor in suspected case of poisoning
   e) Professional Misconduct
   f) Subpoena

**PRACTICAL EXAM (30 MARKS)**

**OSPE's:** (1) Injury certificate; (2) Drunkenness Certification; (3) Examination of Accused and Potency certification in a case of sexual assault/ Examination of the Victim in a case of sexual assault; (4) Age Certification from physical and dental examination; (5) Age or Sex determination from bones with reasons; (6) Age determination from X-ray with reasons; (7) Medical sickness or Fitness from medical leave certificate; (8) Viscera Packing; (9) Interpretation of the age of foetus; (10) Death certificate or Interpretation of the autopsy reports; (11) Wet specimen; (12) Weapon; (13) Photograph; (14) Poison; (15) Appliance/Autopsy instrument. All stations are compulsory and carries equal marks i.e. **15 x**
OTO-RHINO-LARYNGOLOGY
(ENT)

2 = 30 marks.
OTO-RHINO-LARYNGOLOGY (ENT)

GOAL

The broad goal of the teaching of undergraduate students in Otorhinolaryngology is that the undergraduate student have acquired adequate knowledge and skills for optimally dealing with common disorders in ENT and emergencies and principles of rehabilitation of the impaired hearing.

OBJECTIVES

Knowledge

At the end of the course, the student should be able to:

1. Describe the basic pathophysiology of common ENT diseases and emergencies.
2. Adopt the rational use of commonly used drugs, keeping in mind their adverse reactions.

Skills

At the end of the course, the student should be able to:

1. Examine and diagnose common ENT problems including the pre-malignant and malignant disorders of the head and neck.
2. Manage ENT problems at the first level of care and be able to refer whenever necessary.
3. Assist/carry out minor surgical procedures like ear syringing, ear dressings, nasal packing etc.
4. Assist in certain procedures such as tracheostomy, endoscopies and removal of foreign bodies.

Integration

The undergraduate training in ENT will provide an integrated approach towards other disciplines especially neurosciences, ophthalmology and general surgery.

COURSE CONTENT

MUST KNOW CATEGORY

Basic sciences:

Diseases/conditions of ENT:

Examination of Ear, Nose, Oral cavity, Oropharynx and Neck.

Ear:

Causes of Otalgia, Wax, Otomycosis, Otitis externa, Acute Suppurative otitis media, Chronic Suppurative otitis media Safe and unsafe type, causes of ear discharge, Complications of chronic Suppurative otitis media, Hearing loss(causes, diagnosis, types), Otosclerosis, causes of facial palsy, Bell’s palsy, Meniere’s disease, National programme for Prevention and Control of Deafness, Rehabilitation of hearing loss(Hearing Aids/Cochlear Implants)

Nose:

Oral cavity, pharynx, larynx & esophagus:

Ludwig’s angina, causes of Dysphagia, Acute and chronic tonsillitis, acute and chronic abscesses in relation to pharynx, causes of hoarseness of voice ,acute and chronic laryngitis, Benign lesions of vocal cord, malignancy of larynx, causes of Stridor, foreign bodies in air and food passages, emergency management of the airway, Plummer Vinson syndrome.

Recent advances and miscellaneous:

Radiology in ENT, Pure tone Audiometry, Impedance Audiometry, Oto Acoustic Emission(OAE), Brain steam Evoked Response Audiometry(BERA), Premalignant lesions of head and neck, Basic principles of surgeries of ENT, Community Programmes(Detection of congenital and childhood deafness and Hearing rehabilitation) Prevention and identification of ENT malignancies.

PRACTICAL SKILLS

Skill of using a head mirror and know how to focus the light, Skill of using the different instruments in the ENT OPD as diagnostic tools (eg.Tongue depressor, nasal speculum, ear speculum),Skill to examine the Ear, Nose, Throat and Neck, Skill to identify and palpate the anatomical landmarks in ENT and neck, Skill to distinguish the types of hearing loss by tuning fork tests and Pure tone audiograms, Skill of performing of Valsalva manoeuvre, Skill of testing the functions of all cranial nerves , Skill to check for spontaneous nystagmus, Skill for doing the test for nasal patency, Observation of wax removal, Observe indirect laryngoscopy and Posterior Rhinoscopy Observation of removal foreign bodies from the ear and nose Observation of Performing Nasal packing, Observe Tracheostomy, Observe Adenotonsillectomy, Observe Myringoplasty, Observe Myringotomy, Observe Mastoidectomy, Observe Endoscopic sinus surgery. Observation of Puretone Audiometry, Observe Diagnostic nasal Endoscopy and Videolaryngoscopy.

DESIRABLE TO KNOW CATEGORY

Basic sciences:

Anatomy and physiology of Inner ear, equilibrium, Phonation, Anatomy of neck.

Diseases/ Conditions of ENT:
Examination of Nasopharynx and Larynx

Ear:

Sudden Sensorineural hearing loss. Noise induced hearing loss, Traumatic lesions of facial palsy, Causes of Vertigo, Differences between central and peripheral vertigo. Tinnitus, Acoustic Neuroma, Tumours of Middle ear and Mastoid, Screening of Neonatal hearing loss, Middle ear implants, Bone Anchored Hearing Aid (BAHA), Auditory Brain Stem Implants (ABI).

Nose:

Vasomotor Rhinitis, Carcinoma and other Neoplasms of the Para nasal sinuses, Carcinoma of Nasopharynx.

Oral cavity, pharynx, larynx & esophagus:

Diseases of salivary glands, Malignancy of Hypopharynx, Laryngeal paralysis (vocal cord palsy), diagnosis of voice disorders, Motility disorders of Oesophagus, corrosive Burns of Oesophagus.

Recent advances and miscellaneous:

Lasers in ENT, Sleep Apnea, Trauma to the face and neck, HIV manifestations in ENT, Community Programmes-Prevention of deafness-National Programme for Prevention and Control of Deafness (NPPCD), detection of congenital and childhood deafness.

PRACTICAL SKILLS

Skill of using the laryngeal mirror & post nasal mirror, skill of using Otoscope to visualize the ear drum and its mobility and able to distinguish a healthy and unhealthy ear drum and to differentiate safe and unsafe ear disease. Skill to clean the ear, doing a ear syringing. Skill to suction a tracheostomy Observation of Septoplasty, Oesophagoscopy, Rigid Bronchoscopy, Antral wash, Caldwell Luc surgery and Direct Laryngoscopy.

OTO-RHINO-LARYNGOLOGY (ENT)

Theory (one paper) - 40 marks (should contain one question on pre-clinical and para-clinical aspects, of 10 marks)
Oral (Viva) 10 marks
Clinicals 30 marks
Internal assessment (Theory-10 marks; Practical-10 marks) 20 marks
Total 100 marks

Pass: In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including oral and internal assessment (Theory) and minimum of 50% in Practicals / clinicals and internal assessment (Practicals).

OTO-RHINO-LARYNGOLOGY (ENT) – THEORY PAPER

Time: 2 hours Max. Total 40 marks
Q1. Long Answer Question 10 Marks.

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks).

Note: Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 6 of which 1 or 2 should be from desirable to know areas.

MODEL QUESTION PAPER:

OTO-RHINO-LARYNGOLOGY (ENT)
(Nose, Ear, Larynx, Pharynx)

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours                                                                 Maximum marks: 40

1. A 12 year old patient presented with complaints of bilateral otorrhoea of 4 years duration. The discharge was copious and mucoid. Discuss the diagnosis and management of the above patient. (5+5 = 10)

2. Write short notes on: (6X5 = 30)
   a. Rhinosporidiosis
   b. Little’s area of septum
   c. Vocal cord nodules
   d. Acute retropharyngeal abscess
   e. Complications following adenoidectomy
   f. Laryngocoele

PRACTICAL EXAMINATION

TOTAL 30 MARKS

Long Case – 2 x 10 (20 minutes each) = 20 marks
Spotters* – 2 x 5 (5 minutes each) = 10 marks
Total = 30 marks

*SPOTTERS:

1. Audiogram charts

2. Clinical photographs-Facial palsy(LMN type), Vocal cord polyp/nodule, Peritonsillar abscess, Preauricular sinus, Post aural abscess, Perichondritis Pinna, Malignancy of oral cavity

VIVA

TOTAL 10 MARKS

Instruments-3 marks & Viva (ear, nose)-2 marks = 5 marks

X rays- 3 marks & Viva (larynx, pharynx, neck)-2 marks = 5 marks
OPHTHALMOLOGY
OPHTHALMOLOGY

GOAL

The broad goal of the teaching of students in ophthalmology is to provide such knowledge and skills to the students that shall enable him to practice as a clinical and as a primary eye care physician and also to function effectively as a community health leader to assist in the implementation of National Programme for the prevention of blindness and rehabilitation of the visually impaired.

OBJECTIVES

Knowledge

At the end of the course, the student should have knowledge of:

1. Common problems affecting the eye.
3. Main systemic diseases affecting the eye.
4. Effects of local and systemic diseases on patient's vision and the necessary action required to minimise the sequelae of such diseases;
5. Adverse drug reactions with special reference to ophthalmic manifestations;
6. Magnitude of blindness in India and its main causes;
7. National programme of control of blindness and its implementation at various levels.
9. Role of primary health centre in organization of eye camps.
10. Organization of primary health care and the functioning of the ophthalmic assistant.
11. Integration of the national programme for control of blindness with the other national health programmes;
12. Eye bank organization.

Skills

At the end of the course, the student should be able to:

1. Elicit a history pertinent to general health and ocular status.
2. Assist in diagnostic procedures such as visual acuity testing, examination of eye, Schiotz tonometry, Staining for Corneal pathology, confrontation perimetry, Subjective
refraction including correction of presbyopia and aphakia, direct ophthalmoscopy and conjunctival smear examination and Cover test.

3. Diagnose and treat common problems affecting the eye;

4. Interpret ophthalmic signs in relation to common systemic disorders;

5. Assist/observe therapeutic procedures such as subconjunctival injection, Corneal/Conjunctival foreign body removal, Carbolic cauter for corneal ulcers, Nasolacrimal duct syringing and tarsorraphy;

6. Provide first aid in major ophthalmic emergencies.

7. Assist to organise community surveys for visual check up;

8. Assist to organise primary eye care service through primary health centres;

9. Use effective means of communication with the public and individual to motivate for surgery in cataract and for eye donation.

10. Establish rapport with his seniors, colleagues and paramedical workers, so as to effectively function as a member of the eye care team.

Integration

The undergraduate training in Ophthalmology will provide an integrated approach towards other disciplines especially neurosciences, Otorhino-laryngology, General Surgery and Medicine.

CURRICULUM CONTENT

MUST KNOW CATEGORY

DESIRABLE TO KNOW CATEGORY

**Conjunctiva:** Chronic conjunctivitis, Dry eye, Membranous conjunctivitis, Inclusion conjunctivitis. **Cornea:** Deep/Interstitial keratitis, Degenerations, Overview of Keratorefractive surgery. **Uveal tract:** Systemic associations of uveitis, Choroiditis, Coloboma iris. **Vitreous:** Synchisis syntillans, Asteroid hyalosis. **Glaucoma:** Secondary glaucomas, Congenital glaucoma. **Retina:** Retinopathy of prematurity, Retinitis pigmentosa. **Optic nerve:** Optic atrophy. **Squint:** Types of squint (Paralytic, Non paralytic). **Orbit:** Cavernous sinus thrombosis. **Lacrimal system:** Tear film and dry eye. **Lids:** Ectropion, entropion, trichiasis. **Refractive errors:** Anisometropia. **Injuries:** Intra ocular foreign body, medico legal aspects. **Ophthalmic surgeries:** Desirable to watch Keratoplasty, trabeculectomy. **Miscellaneous:** Overview of Recent Advances in Ophthalmology. Lasers in Ophthalmology.

PRACTICAL SKILLS

A student shall observe the following skills: To diagnose common ophthalmological conditions such as:- Trauma, Acute conjunctivitis, allergic conjunctivitis, xerosis, corneal ulcer, myopia, hypermetropia, cataract, glaucoma,ocular injury and sudden loss of vision; To diagnose ocular changes in common systemic disorders; To perform investigative procedures such as:- Tonometry, syringing, direct ophthalmoscopy, and fluorescein staining of cornea; Observe the following procedures: Ocular bandaging, Removal of concretions, Epilation, Corneal foreign body removal, Chalazion removal, Glaucoma surgery – assisted, Enucleation of eye in cadaver – assisted; Shall have full knowledge on available methods for rehabilitation of the blind.

OPHTHALMOLOGY – DISTRIBUTION OF MARKS

OPHTHALMOLOGY – THEORY PAPER

Time: 2 hours Total 40 marks

Q1. Long Answer Question 10 Marks.

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks).

Note: Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 6 of which 1 or 2 should be from desirable to know areas.
MODEL QUESTION PAPER:

OPHTHALMOLOGY

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours Maxmum marks: 40

1. Describe symptoms, signs, complications and management of bacterial keratitis. Also write the differentiating features between bacterial and fungal corneal ulcers. (2+2+4+2= 10)

2. Write short notes on: (6X5=30)
   a) Congenital Glaucoma
   b) After cataract
   c) Myopia
   d) Chronic dacryocystitis
   e) Fundus changes in diabetic retinopathy
   f) Optic neuritis

CLINICAL EXAM 30 MARKS

2 cases - 10 marks each
Spotters - 10 marks
GENERAL MEDICINE
GENERAL MEDICINE

GOAL

The broad goal of the teaching of undergraduate students in Medicine is to have the knowledge, skills and behavioural attributes to function effectively as the first contact physician.

OBJECTIVES

At the end of the course, the learner should be able to:

1. Elicit clinical history, perform thorough physical examination, elicit physical signs, interpret findings, develop differential diagnoses and request relevant laboratory investigations.

2. Diagnose common clinical disorders with special reference to infectious diseases, nutritional disorders, life style diseases, tropical and environmental diseases.

3. Plan relevant diagnostic and investigative procedures and be able to interpret them.

4. Outline the principles of management and prevention of common health problems affecting the community.

5. Plan and write prescription for comprehensive treatment using the principles of rational drug therapy.

6. Provide first level care for common medical conditions and emergencies and recognize the timing and level of referral, if required.

7. Perform essential bedside procedures like venepuncture, SC and IM injections, biological fluid examinations.

8. Assist common bedside procedures like pleural aspiration, bone marrow aspiration and biopsy, lumbar puncture etc.

10. Develop an interest in the care for all types of patients.

11. Evaluate each patient as a person in society and not merely a collection of organ systems or symptoms and signs.

12. Discern the hopes and fears of patients, which underlie the symptom complexes and know how to handle these emotions, both in himself / herself and others.

13. Demonstrate skills in documentation of case details including epidemiological data.
14. Respect patients’ rights and privileges including patients’ right to information and right to seek a second opinion.

15. Demonstrate empathy and humane approach towards patients and their families and respect their sensibilities.

16. Demonstrate communication skills in interviewing patients, providing explanations to patients and families about the management and prognosis, providing counseling and giving health education messages to patients, families and communities.

17. Have an open attitude to the developments in Medicine so as to be aware of the need to keep abreast of new knowledge.

18. Learn and adopt new ideas and new situations where resources may be limited.

19. Comprehend, accept and manage the uncertainties in scientific knowledge and medical practice.

20. Understand the ethical and legal implications of his/her medical decisions.

**COURSE CONTENTS**

**MUST KNOW CATEGORY**

**Clinical methods in the practice of medicine:**

A. Clinical approach to patients: The art of medicine, doctor-patient relationship, communicationskill, and doctor’s responsibilities.

B. Clinical approach to disease and care of patients: Clinical diagnostic reasoning i.e. diagnostic possibilities based on the interpretation of history, physical findings and laboratory investigations.

C. Principles of rational management: Keeping in mind the best evidence in favor of, or against different remedial measures (EBM).

**Common symptoms of disease:**

**Nutrition and nutritional disorders:**

**Fluid, electrolyte and acid base imbalance:**
Fluid and electrolyte balance; acidosis and alkalosis in particular relevance to diarrhea, vomiting, dehydration, uremia and diabetic ketoacidosis.

**Poisoning, stings and bites:**

General approach to the poisoned patient. Poisoning by specific pharmaceutical agents- organophosphorus compounds, methyl alcohol, narcotics, aluminium phosphide, sedatives / hypnotics, and other poisonings that are common locally (e.g. yellow oleander). Drugs of misuse. Snake bite and Envenomation. Other bites and stings -scorpion and spider.

**Specific environmental and occupational hazards:**

**Immune response and infections:**

**Specific infections-epidemiology, clinical features, laboratory diagnosis, rational use of antimicrobial therapy against the following and their prevention**

**Protozoal infections:** Amoebiasis, Giardiasis, Malaria, Leishmaniasis Trichomoniasis, Toxoplasmosis, and Trypanosomiasis.

**Mycobacterial infections:** Tuberculosis, Leprosy.

**Other organisms:** Rickettsia, Mycoplasma and Chlamydial diseases.

**Common fungal infections:** Candidiasis, Aspergillosis, Histoplasmosis, Cryptococcosis, Mucormycosis, and Pneumocystis jirovecii.

**Common parasitic infestations:** Hookworm, roundworm, and thread worm.

**Cardiovascular system:**

Clinical examination of the cardiovascular system. Functional anatomy, physiology and investigations. Major manifestations of cardiovascular disease- Chest pain, breathlessness, palpitation, acute circulatory failure (cardiogenic shock), presyncope and syncope, Cardiac arrest and sudden cardiac death, abnormal heart sounds and murmurs. ECG, x ray chest with reference to common cardiovascular diseases. Acute and chronic congestive cardiac

**Respiratory system:**

**Renal and genitourinary system:**

**Gastrointestinal tract:**

**Disease of pancreas:**

Acute and chronic pancreatitis.

**Hepatobiliary disease:**

**Endocrine and metabolic diseases:**

**Hematological disorders**

**Leukemias:** Recognition, diagnosis, differential diagnosis and broad principles of management.

**Lymphomas:** Recognition, diagnosis, differential diagnosis and broad principles of management.

**Blood group and transfusion:** Major blood group systems and histo compatibility complex, concepts of transfusion and component therapy; indications for transfusion therapy, precautions to be taken during blood transfusion, hazards of transfusion and safe handling of blood and blood products. Disorders of coagulation and venous thrombosis. Bone marrow transplantation/stem cell transplantation.

**Disorders of the immune system, connective tissue and joints:**

**Neurological diseases:**

**Clinical pharmacology and therapeutics:**

**Critical care medicine:**

**Pain management and palliative care:**

General principles of pain. Assessment and treatment of pain.

**Geriatrics:**

**Medical ethics:**

**Medical psychiatry:**

Classification of psychiatric disorders. Aetiological factors in psychiatric disorders. The clinical interview and mental state examination.

**Treatments used in psychiatry:** Psychological treatments. Physical treatments.

DESIRABLE TO KNOW CATEGORY

**Immune response and infections:**

Immunodeficiency disorders- congenital.

**Specific infections-epidemiology, clinical features, lab diagnosis, rational use of antimicrobial therapy against the following and their prevention**

**Bacterial infections:** Pertussis and diphtheria, Legionella infections, Botulism, Gas gangrene and clostridial infections, Brucellosis, Plague, Donovanosis (Granuloma inguinale).

**Viral infections:** Infectious mononucleosis, Viral encephalitis.

**Cardiovascular system**

Aortic aneurism, Myocarditis and cardiomyopathy.

**Respiratory system:**

Bronchoscopy, Obstructive sleep apnoea. Diseases of the nasopharynx, larynx and trachea. Diseases of the mediastinum, diaphragm and chest wall.

**Renal and genitourinary system:**

**Gastrointestinal tract:**

**Disease of pancreas:**

Tumors of the pancreas.

**Hepatobiliary disease:**

Hepatorenal failure/syndromes. Fatty liver and non alcoholic steatohepatitis. Infiltrative diseases of liver. Tumors of gall bladder and bile ducts.

**Endocrine and metabolic diseases:**

**Disorders of the immune system, connective tissue and joints:**

**Neurological diseases:**

**Critical care medicine:**

Scoring systems of critical care. Outcome and costs of intensive care.

**Pain management and palliative care:** Palliative care.

**Medical psychiatry:** Misuse of drugs other than alcohol.
MEDICINE - DISTRIBUTION OF MARKS

Theory: Two papers of 60 marks each 120 marks

Includes Paper I- Systemic Medicine and Paper II- Systemic Medicine including Infectious, Tropical Medicine, Psychiatry and Dermatology. Shall contain one question on basic sciences and allied subjects.

Oral (Viva) Interpretation of X-ray ECG, etc. 20 marks
Clinical 100 marks
Internal assessment (Theory -30; Practical-30) 60 marks
Total 300 marks

Pass: In each of the subjects a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals.

MEDICINE THEORY PAPER

Paper I (Systemic Medicine) 60 marks

Time: 3 hours

Section A
Q1. Long Answer Question 10 marks (must be structured)
Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Section B
Q1. Long Answer Question 10 marks (must be structured)
Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Paper II (Systemic Medicine including Infectious, Tropical Medicine, Psychiatry and Dermatology) 60 marks

Time: 3 hours

Section A
Q1. Long Answer Question 10 marks (must be structured)
Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Section B
Q1. Long Answer Question 10 marks (must be structured)
Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

Note: Long Answer Questions (LAQ) should be from must know area. Total number of short notes is 16 of which 4 or 5 should be from desirable to know areas.

Only one question from Psychiatry and Dermatology each is permissible, which should be from must know area.
MODEL QUESTION PAPERS:

GENERAL MEDICINE PAPER I
(Systemic Medicine)

ANSWER ALL QUESTIONS
Each Section to be answered in separate Answer Book
Illustrate your answer with suitable diagrams

Time: 3 hours  Maximum marks: 60

SECTION A

1. Discuss briefly the etiology, Clinical Features, Complications and management of Infective Endocarditis \((2+3+2+3 = 10)\)

2. Write short notes on: \((4 \times 5 = 20)\)
   
   a) Secondary Hypertension
   b) Diagnosis and Clinical features of Chronic Renal Failure
   c) DOTS
   d) Precipitating factors and management of hepatic encephalopathy.

SECTION B

3. A 25 year old female patient came with history of sudden onset of weakness of the right half of the body \((3+3+4=10)\)
   
   a. What is your diagnosis and possible causes in this young patient?
   b. How will you arrive at the diagnosis?
   c. How will you manage this patient?

4. Write short notes on: \((4 \times 5 = 20)\)
   
   a) Immunological markers of Hepatitis ‘B’ infection and their significance
   b) Clinical features and management of cushings syndrome.
   c) Classification and aetiology of Portal Hypertension
   d) Aetiology and diagnosis of Nephrotic syndrome

GENERAL MEDICINE PAPER II
(Systemic Medicine including Infectious, Tropical Medicine, Psychiatry and Dermatology)

ANSWER ALL QUESTIONS
Each Section to be answered in separate Answer Book
Illustrate your answer with suitable diagrams

Time: 3 hours  Maximum marks: 60

SECTION A

1. Describe briefly the pathogenesis, clinical features and management of Diabetic Ketoacidosis. \((3+4+3 = 10)\)

2. Write short note on: \((4 \times 5 = 20)\)
   
   a) A man has been bitten by a stray dog on his face. The wound is lacerated. Outline
the management
b) Classification of Hansen’s Disease
c) Management and extra articular complications of Rheumatoid Arthritis
d) Sex linked recessive inheritance

SECTION B

3. A 22 year old female patient has been brought to the hospital with alleged history of ingestion of an insecticide. Her pupils are small (pin point) and she has profuse sweating. (3+4+3 = 10)

a) What is your diagnosis? What other signs do you look for in this patient?
b) Outline the management of this case
c) What complications can occur in this patient?

4. Write short notes on: (4 x 5 = 20)

a) Bipolar disorder
b) Complications of Falciparum Malaria
c) Clinical feature and management of Swine flu
d) Immune mediated acute transfusion reaction

PRACTICAL PAPER

Practical marks = 100

1. Long case – 40 marks (45 minutes)
2. Short cases – 2x25=50 (20 minutes each)
3. OSCE stations – 2x5=10 (5 minutes each)

LONG CASE

1. The long case can be taken from any system- CNS, cardiovascular and respiratory and the abdomen. Students are expected to take a detailed history, examine the patient, give a provisional diagnosis (anatomical, morphological and etiological) and differential diagnosis, and formulate a management plan (relevant investigations and appropriate therapy, empirical or definitive).

2. The candidate should write a case sheet with the above details, present the history and examination details to the examiners, and justify the rationale for the diagnosis and management. Time allotted for the long case will be 45 minutes.

3. The ability to defend their diagnosis, depth and extent of his/her knowledge regarding the patient and the candidate’s qualities such as confidence and attitude should be assessed.

Topics:
Nervous system - Cerebrovascular accident (Anterior circulation- cortical and capsular hemiplegia) Spastic paraparesis.

Cardiovascular system - Valvular heart disease (mitral/aortic), Infective endocarditis (subacute) Dilated Cardiomyopathy with atrial fibrillation, Valvular heart disease with atrial fibrillation, Right heart failure with anemia/jaundice, VSD with heart failure, Tetralogy of Fallot.

Respiratory system - Cor pulmonale with COPD, Bronchiectasis, Resolving pneumonia/consolidation, Intersitial lung disease, Fibrocavitary disease (Tuberculosis), Pleural effusion (Infective/non infective), Hydropneumothorax.

**SHORT CASE**

Candidates are allowed to take a very short succinct history to justify the diagnosis, instead of having no history at all, since medical examination always follows history. The time for the two semi-long cases will be 40 minutes (2 x 20). **Case sheet writing is not necessary.**

**Topics:**

**Systemic** - Acute febrile illness, Fever with splenomegaly (mild), Fever with hepatomegaly, Fever with exanthema, Acute gastroenteritis/ diarrhea, Dengue fever, Scrub typhus-eschar with fever Chikungunya-acute fever with arthritis.

**Cardiovascular** – Hypertension, Hypertensive urgency, Hypertension with edema/facial puffiness Rheumatic fever, Coronary artery disease (stable angina), Peripheral artery disease, VSD, Single valve disease (MS/MR/AS/AR), Pulmonary hypertension.

**Hematological/Lymphoreticular**- Localised lymphadenopathy, Anemia-IDA/ Megaloblastic/ Hemolytic, Massive splenomegaly.

**Musculoskeletal** - Rheumatoid arthritis hand, SLE.

**Nervous system** - Cranial nerve examination, CN 2,3,4 and 6, CN 7, CN 9 and 10, Radial nerve palsy, Claw/ape hand, Small muscle wasting (hand), Foot drop, Peripheral neuropathy, Motor system examination, Cerebellar system examination, Seizure disorder, Parkinsonism, Meningitis, recovering.

**Skin** - Cellulitis(infective/filarial), Psoriasis, Hansen’s disease, Tinea versicolor, Herpes zoster, SLE rash, Oral candidiasis, Pellagra, Scabies with complications.

**Environmental** - Snake bite/cellulitis, Scorpion sting/pain/cellulitis, Needle stick injury, STD exposure Yellow oleander poisoning, Rodenticide poisoning.

**Other emergencies**- Alcohol withdrawal syndrome (ADS/AWS).

**Endocrinology** – Hypothyroidism, Hyperthyroidism, Hypoglycemia, Diabetes mellitus (DM), DM with edema, DM with trophic ulcer/neuropathic pain, DM with claudication, DKA recovering, Obesity/acanthosis, Obesity/hirsuitism.

**Respiratory** – COPD, Bronchial asthma, URI with fever/ influenza.

**OSCE**

**Respiratory** - Chest AP/Transverse diameter, Chest expansion, Palpation of chest movements, Percussion of lung areas, Shifting dullness, Tidal percussion, Auscultation of lung areas.

**Abdomen** - Splenomegaly palpation, Splenomegaly percussion, Liver palpation, Liver span, Free fluid abdomen, Shifting dullness, Fluid thrill
Nervous system - Cranial nerve palsy (2, 3, 4, 5, 6, 7, 11, 12), Power grading of any limb, Reflexes (DTRs; Plantar; Abdominal reflex; Cremasteric reflex), Joint position sense, Rombergs test, Wartenburg test, Hoffman sign, Glabellar tap, Cog wheel rigidity, Meningeal sign (Kernig/Brudzinski).
RESPIRATORY MEDICINE

GOAL
The aim of teaching the undergraduate student in Tuberculosis and Chest Diseases is to impart such knowledge and skills that may enable him/her to diagnose and manage common ailments affecting the chest with the special emphasis on management and prevention of Tuberculosis and especially National Tuberculosis control programme.

OBJECTIVES

Knowledge
At the end of the course of Tuberculosis and Chest-diseases, the student shall be able to:

1. Demonstrate sound knowledge of common chest diseases, their clinical manifestations, including emergent situations and of investigative procedures to confirm their diagnosis.

2. Demonstrate comprehensive knowledge of various modes of therapy used in treatment of respiratory diseases;

3. Describe the mode of action of commonly used drugs, their doses, side-effects/toxicity, indications and contra-indications and interactions;

4. Describe commonly used odes of management including medical and surgical procedures available for treatment of various diseases and to offer a comprehensive plan of management inclusive of National Tuberculosis Control Programme.

Skills
The student shall be able to:

1. Interview the patient, elicit relevant and correct information and describe the history in chronological order;

2. Conduct clinical examination, elicit and interpret clinical findings and diagnose common respiratory disorders and emergencies;

3. Perform simple, routine investigative and office procedures required for making the bed side diagnosis, especially sputum collection and examination for etiologic organisms especially Acid Fast Bacilli (AFB), interpretation of the chest x-ray and respiratory
function test;

4. Interpret and manage various blood gases and PH abnormalities in various respiratory diseases.

5. Manage common diseases recognizing need for referral for specialized care, incase of inappropriateness of therapeutic response;

6. Assist in the performance of common procedures, like laryngoscopic examination, pleural aspiration, respiratory physiotherapy, laryngeal intubation and pneumo-thoracic drainage/aspiration.

Integration

The broad goal of effective teaching can be obtained through integration with departments of Medicine, Surgery, Microbiology, Pathology, Pharmacology and Preventive & Social Medicine.

COURSE CONTENTS

MUST KNOW CATEGORY

Tuberculosis:

Students must know the following aspects of tuberculosis: Clinical signs and symptoms of pulmonary TB and extra pulmonary TB (pleura, lymph node, pericardium, mediastinum, abdominal, nervous system, genitourinary and skeletal tuberculosis. Laboratory diagnosis of Tuberculosis – microscopy, culture, X-rays & molecular diagnosis. Treatment of TB including drugs, dosages, adverse effects. TB in special situations (HIV, DM, pregnancy, cirrhosis liver, chronic renal failure). Management of drug susceptible tuberculosis under RNTCP.

Airway diseases:

Asthma, COPD, bronchiectasis.

Pneumonias including lung abscess

Pleural diseases:

Effusion, empyema, pneumothorax

Respiratory emergencies:

Management of acute severe asthma, hemoptysis, tension pneumothorax, pulmonary embolism, acute respiratory failure and interpretation of ABG’s.

Occupational lung diseases:

Coal workers’ pneumoconiosis(CWP), Silicosis, hypersensitivity pneumonitis.

DESIRABLE TO KNOW CATEGORY

**PRACTICAL SKILLS**

**PSYCHIATRY AND BEHAVIOURAL SCIENCES**
OBJECTIVES

At the end of the course, the student should be able to:

1. Understand the nature and development of different aspects of normal human behaviour like learning, memory, motivation, emotion, personality and intelligence.
2. Recognise differences between normal and abnormal behaviour.
3. Understand how psychological and social factors influence human behaviour throughout his life cycle, and how they affect his response to health and illness.
4. Conduct psychosocial evaluation of the patient in respect to attributes like socio-economic status; attitude to health and disease and health services.
5. Establish harmonious doctor-patient relationship.
6. Communicate effectively with patient, his family and community.
7. Possess and utilise the knowledge and skills of behavioural sciences / techniques for adoption of health practices.

COURSE CONTENTS

MUST KNOW CATEGORY

DESIRABLE TO KNOW CATEGORY

PRACTICAL SKILLS

2. Perform under Supervision – Understanding Normal and abnormal behaviour, Unconscious, Subconscious, Conscious mind; Id, Ego, Superego (Psychoanalytic Approaches) Behavioural Analysis.

PSYCHIATRY & DRUG / ALCOHOL DE-ADDICTION

OBJECTIVES

Able to student to deliver mental health services at the primary care level:

1. Able to identify signs and symptoms of common psychiatric illnesses.
2. Able to identify developmental delays including Cognitive delays.
3. Aware of common psychopharmacological interventions in Psychiatry.
4. Able to apply basic counselling skills and have comfort with discussing common psychological issues.
5. Able to understand the nature and development of normal human behaviour.
6. Able to appreciate the interplay between Psychological and Physical factors in medical presentations.
7. Aware of statutory and educational provisions with regard to psychiatric illnesses and disability.
8. Able to develop helpful and humane attitude towards psychological, psychiatric and behavioural difficulties.
9. And overall, able to deliver mental health services at the primary care level.

COURSE CONTENTS

MUST KNOW CATEGORY

DESIRABLE TO KNOW CATEGORY

PRACTICAL SKILLS

1. Perform independently - Psychiatric history taking. Mental status examination (primary mental functions). Mental status examination ( higher mental functions).
Diagnosis of common straight forward. Psychiatric disorders. Mental Hygiene. Sleep Hygiene. Brief Psychotherapy. Counselling. Suspect clinically and refer to the speciality(Psychiatrist)allied speciality (like, neurologist). Behavioural and psychological analysis of Self Destructive Behaviour. Initial and primary care for the children and adolescents and then refer to the psychiatrist/ child & Adolescent psychiatrist/ Geriatric Psychiatrist. Exercising empathy, compassion and establishing rapport and maintaining rapport, which is a must for all psychiatric interventions (need not necessarily in a long term psycho-therapeutic contract).

2. **Perform under Supervision** - Dealing with PTSD. Developmental delay assessment. Geriatric Mental status examination (Primary and higher mental functions).

**DERMATOLOGY**
DERMATOLOGY

OBJECTIVES

At the end of the course, the student should be able to:

1. Demonstrate good knowledge of common skin diseases, clinical manifestations, bedside investigations with special emphasis on clinical diagnosis.

2. Demonstrate comprehensive knowledge of various modes of topical therapy.

3. Describe the mode of action of commonly used dermatological drugs, their doses, side effects toxicity, indications and contraindications and interactions.

COURSE CONTENTS

MUST KNOW CATEGORY

DESIRABLE TO KNOW CATEGORY

PRACTICAL SKILLS

1. Perform independently - Good and complete skin examination including hairs and nails. Good and complete examination of the genitalia, and oral mucosa. Leprosy: Must be able to demonstrate anaesthesia in patches and extremities. Demonstration thickened nerves. Classify and manage Hansen’s disease and differentially diagnose a hypopigmented patch. Clinically identify Type I and Type II Reactions in Leprosy and manage acute reactions. Prevent deformities in Leprosy, through counseling etc. Care of
deformities in limbs and ulcer care. **STD syndromes**: Syndromic management, HIV counselling, Contact tracing, Treatment of contacts, Skills for various compresses.

3. **Assist the expert** - Management of Dermatological Emergencies. Slit smear for AFB.

**PAEDIATRICS**
PAEDIATRICS

GOALS

The broad goal of the teaching of undergraduate students in Pediatrics is to acquire adequate knowledge and appropriate skills for optimally dealing with major health problems of children to ensure their optimal growth and development.

OBJECTIVES

Knowledge & Skills

At the end of the course, the learner shall be able to:

1. Diagnose and appropriately treat common pediatric and neonatal illnesses.

2. Describe the common pediatric disorders and emergencies in terms of epidemiology, etiopathogenesis, clinical manifestations, diagnosis, rational therapy and rehabilitation;

3. Identify pediatric and neonatal illnesses and problems that require secondary and tertiary care and refer them appropriately.

4. Advise and interpret relevant investigations.

5. Counsel and guide patient’s parents and relatives regarding the illness, the appropriate care, the possible complications and the prognosis.

6. Provide emergency cardiopulmonary resuscitation to newborns and children.

7. Describe preventive strategies for common infectious disorders, malnutrition, genetic and metabolic disorders, poisonings, accidents and child abuse;

8. Participate in the National Health Programmes effectively.

9. Diagnose and effectively treat acute pediatric and neonatal emergencies.

10. Discharge medico-legal and ethical responsibilities.

11. Perform routine investigative and therapeutic procedures, as applicable to children
including neonates.

**Integration**

The training in Pediatrics should be integrated with other disciplines, including Anatomy, Physiology, Medicine, Surgery, Community Medicine, Obstetrics, and Physical Medicine and Rehabilitation, to prepare the student to deliver preventive, promotive, curative and rehabilitative services for care of children both in the community and at hospital as part of a team.

**COURSE CONTENTS**

**MUST KNOW CATEGORY**

**Vital Statistics:**

Maternal, Perinatal, neonatal, infant and preschool mortality rates. Current National programs such as ICDS, RCH, Vitamin A prophylaxis, IDA, IDD, AFP, UIP, Pulse polio, ARI, Diarrhea Control Program, etc.

**Growth and Development:**

Normal growth from conception to maturity. Anthropometry: measurement and interpretation of weight, length/height, head circumference, mid-arm circumference. Use of weighing machines, infantometer. Interpretation of Growth Charts: Road to Health card and percentile growth curves. Growth patterns of different organ systems such as lymphoid, brain and sex organs. Normal pattern of teeth eruption. Principles of normal development. Important milestones in infancy and early childhood in the areas of gross motor, fine motor, language and personal social development. 3-4 milestones in each of the developmental fields, age of normal appearance and the upper age of normal. Preventable causes and assessment of developmental retardation. Sexual maturity rating.

**Nutrition:**

**Immunization:**

Infectious Diseases:

Epidemiology, basic pathology, natural history, symptoms, signs, complications, investigations, differential diagnosis, management and prevention of common bacterial, viral and parasitic infections in the region, with special reference to vaccine-preventable diseases: Tuberculosis, poliomyelitis, diphtheria, whooping cough, tetanus including neonatal tetanus, measles, mumps, rubella, typhoid, viral hepatitis, cholera, chickenpox, giardiasis, amebiasis, intestinal helminthiasis, malaria, dengue fever, ricketsial infections, leptospirosis, AIDS. Rational management of fever, PUO, fever without focus.

Hematology:

Causes of anemia in childhood. Classification based on etiology and morphology. Epidemiology, recognition, diagnosis, management and prevention of nutritional anemia - iron deficiency, megaloblastic. Clinical approach to a child with anemia with/without lymphadenopathy and/or hepatosplenomegaly. Epidemiology, clinical features, investigations and management of thalassemia. Approach to a bleeding child.

Respiratory system:

Gastrointestinal tract:

Clinical approach to a child with jaundice, vomiting, abdominal pain, bleeding, hepatosplenomegaly. Acute diarrhea disease - Etiopathogenesis, clinical differentiation of watery and invasive diarrhea, complications of diarrheal illness. Assessment of dehydration, treatment at home and in hospital. Fluid and electrolyte management. Oral rehydration, composition of ORS. Clinical features and management of acute viral hepatitis, causes and diagnosis of chronic liver disease; neonatal cholestasis. Common causes of constipation.

Central Nervous System:

Cardiovascular system:

Clinical features, diagnosis, investigation, treatment and prevention of acute rheumatic fever. Common forms of rheumatic heart disease in childhood. Differentiation between rheumatic and rheumatoid arthritis. Recognition of congenital acyanotic and cyanotic heart disease. Hemodynamics, clinical features and
management of VSD, PDA, ASD and Fallot’s tetralogy. Recognition and management of congestive cardiac failure and cyanotic spells in infants and children.

**Genitourinary system:**

**Endocrinology:**

Etiology, clinical features and diagnosis of diabetes and hypothyroidism, and goiter in children.

**Neonatology:**

**Pediatric Emergencies:**

**Fluid-Electrolyte:**

Principles of fluid and electrolyte therapy in children.

**Genetics:**

Principles of inheritance and diagnosis of genetic disorders, Down’s syndrome.

**Behavioral Problems:**

Breath holding spells, nocturnal enuresis, temper tantrums, pica, refusal to feed.

**IMNCI:**

Management of a Young child below 2 months. Management of a child between 2 months - 5 year of age.
DESIRABLE TO KNOW CATEGORY

**Vital Statistics:**

**Growth and Development:**

**Nutrition:**
Definition, causes and management of obesity.

**Infectious Diseases:**
Kala-azar, leprosy, chlamydia infection.

**Hematology:**
Diagnosis of acute lymphoblastic leukemia and principles of treatment. Clinical features and management of hemophilia, ITP, and aplastic anemia. Diagnosis and principles of management of lymphomas. Types, clinical features and management of acute hemolytic anemia.

**Respiratory system:**
Multidrug resistant tuberculosis, bronchiectasis, cystic fibrosis.

**Gastrointestinal tract:**

**Central Nervous System:**

**Cardiovascular system:**
Diagnosis and management of bacterial endocarditis, pericardial effusion, myocarditis. Hypertension in children-recognition, etiology, referral.
Genitourinary system:

Endocrinology:
Delayed and precocious puberty. Short stature. Ambiguous genitalia.

Neonatology:
Transportation of a sick neonate. Common intra-uterine infections.

Pediatric Emergencies:

Fluid-Electrolyte:
Pathophysiology of acid-base imbalance and principle of management.

Behavioral Problems:
Learning disabilities, Autism

Pediatric Surgical Problems:
Diagnosis and timing of surgery of cleft lip/palate, hypospadias, undescended testis, tracheo-esophageal fistula, hydrocephalus, CTEV, umbilical and inguinal hernia, anorectal malformations, hypertrophic pyloric stenosis.

Therapeutics:
Pediatric doses, drug combinations, drug interactions, age specific choice of antibiotics, etc.

Adolescent Medicine:
Changes during adolescence, factors affecting adolescent health.

PRACTICAL SKILLS

2. Perform under Supervision - Lumbar puncture, IV cannula insertion and Blood sampling, Peritoneal dialysis.

3. Assist the expert - Pleural tap, Ascitic tap, Neonatal resuscitation, Intraosseous infusion.

4. Observe - Bone marrow aspiration, Liver biopsy, Kidney biopsy, Exchange transfusion

PAEDIATRICS - DISTRIBUTION OF MARKS
The theory paper (one paper) is 40 marks.

Oral (Viva) is 10 marks.

Practical / Clinicals is 30 marks.

Internal assessment (Theory-10 marks; Practical-10 marks) is 20 marks.

Total 100 marks.

Pass: In each of the subjects, a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including oral and internal assessment (Theory) and minimum of 50% in Practicals / clinicals and internal assessment (Practicals).

PAEDIATRICS - THEORY PAPER

Total 40 marks

Time: 2 hours.

Q1. Long Answer Question 10 Marks.

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks).

Note: Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 6 of which 1 or 2 should be from desirable to know areas.

MODEL QUESTION PAPER:

PAEDIATRICS

ANSWER ALL QUESTIONS
Illustrate your answer with suitable diagrams

Time: 2 hours
Maximum marks: 40

1. A 4 year old child weighing 8kg is brought with a history of fever and dysentery of 3 days duration. Her height is 98cms and midarm circumference 11 cms. She is drowsy and not able to take anything orally. She last voided urine 18 hours ago. (2+1+5+2=10)

   a) What is the nutritional status of this child as per WHO classification?
   b) What is the hydration status of this child?
   c) How will you manage this child?
   d) Mention 4 bacterial pathogens causing dysentery?

2. Write briefly on the following: (6X5 =30)

   a) Kangaroo mother care
   b) Management of cyanotic spell
   c) Simple febrile convulsions
   d) Management of acute severe asthma
   e) Microcephaly
   f) Vesicoureteric reflux

CLINICALS (TOTAL MARKS - 30)
Long case (general pediatrics) 15 Marks
Short case (newborn) 10 Marks
Spotters (2) 5 Marks (2.5X2)

VIVA VOCE (Total marks: 10)

4 stations
Station 1 : X-RAYS
Station 2 : Vaccines and drugs
Station 3 : Instruments
Station 4 : Nutrition

GENERAL SURGERY
GENERAL SURGERY

GOALS
The broad goal of the teaching of undergraduate students in Surgery is to produce graduates capable of delivering efficient first contact surgical care.

OBJECTIVES
At the end of the course, the learners shall be able to:

1. Diagnose and appropriately manage common surgical ailments in a given situation.

2. Identify situations calling for urgent or early surgical intervention and refer at the optimum time to the appropriate centers.

3. Provide adequate preoperative, post-operative and follow-up care of surgical patients.

4. Counsel and guide patients and relatives regarding need, implications and problems of surgery in the individual patient.

5. Provide emergency resuscitative measures in acute surgical situations including trauma. Should be well versed with BLS & ITLS.

6. Organise and conduct relief measures in situations of mass casualties.

7. Effectively participate in the National Health Programme especially the Family Welfare Programme.

8. Discharge effectively medico-legal and ethical responsibilities.

**COURSE CONTENT**

**MUST KNOW CATEGORY**

**System Based:**

symptoms and investigations of urinary tract, Diagnosis and principles of management of urolithiasis, Renal tuberculosis, Lower Urinary tract symptoms or prostatism, Benign prostatic hyperplasia: diagnosis and management, Genital tuberculosis in male, Phimosis and paraphimosis, Diagnosis and principles of treatment of undescended testis, Torsion testis, Hydrocele, haematocele and pyocele, Acute and chronic epididymo – orchitis, Principles of management of Urethral injuries.

**Symptoms based:**

Ulcers in oral cavity, Solitary nodule of the thyroid, Lymph node swellings in the neck, Suspected breast lump, Acute abdominal pain, Dysphagia, Chronic abdominal pain, Epigastric mass, Right hypochondrium mass, Right hypochondrium mass, Right iliac fossa mass, Renal mass, Inguino – Scrotal swelling, Gastric outlet obstruction, Upper gastrointestinal bleeding, Lower gastrointestinal bleeding, Anorectal symptoms, Acute intestinal obstruction, Obstructive jaundice, Acute retention of Urine, Bladder outlet obstruction, Haematuria, Peripheral Vascular disease, Varicose veins, New born with developmental anomalies.

**DESIRABLE TO KNOW CATEGORY**

**System Based:**

Mechanisms and management of missile, blast and gunshot injuries, Organ transplantation: Basic principles, Nutritional support to surgical patients, Investigations in case of arterial obstruction, amputation vascular injuries basic principles and management, Branchial cyst, Cystic hygroma, Thyroiditis, Thyroid neoplasm’s, Thoracic outlet syndrome, Recognition of oesophageal atresia and principles of management, Congenital diaphragmatic Hernia, Principles of management, Cancer stomach, Portal hypertension, Neoplasm’s of liver, Rupture spleen, Indications for splenectomy, Carcinoma gall bladder, Choledochat cyst, Chronic pancreatitis, Carcinoma pancreas, Ulcerative colitis, Carcinoma colon, Anorectal Anomalies, Hirschprung’s disease, principles of management, Abdominal wall defects in children, Carcinoma rectum, Prolapse of rectum, Hydronephrosis, Pyonephrosis, perinephic abscess, Renal tumors, Neonatal urinary obstruction, Carcinoma penis, Varicocele, Testicular tumours.

**PRACTICAL SKILLS**

1. **Perform independently** - Obtain a proper relevant history, and perform a humane and thorough clinical examination including internal examinations ( per-rectal and per vaginal ) and examinations of all organs / systems in adults and children. Arrive at a logical working diagnosis after clinical examination. Order appropriate investigations keeping in mind their relevance (need based) and cost effectiveness. Write a complete case record with all necessary details. Write a proper discharge summary with all relevant information. Obtain informed consent for any examination / procedure. At the end of the learners should be able to perform: Start iv lines and Monitor infusions, Start and monitor blood transfusion, Venous cut-down, Manage a C.V.P. line, Conduct CPR ( Cardiopulmonary resuscitation ), Basic life support / ITLS, Endotracheal intubation, Pass nasogastric tube, Perform digital rectal examination and proctoscopy, Urethral catheterisation, Dressing of the wounds, Suturing of the simple wounds.
2. **Perform under Supervision** - Remove small subcutaneous swellings, Various types of biopsies, Relieve pneumothorax, Infiltration, surface and digital Nerve blocks, Incise and drain superficial abscesses, Manage Lacerated wounds, Control external haemorrhage.

4. **Observe** - All the operations performed by surgeons during surgical posting during general surgical postings.

**SURGERY & ITS ALLIED SPECIALITIES- DISTRIBUTION OF MARKS**

Theory : Two papers of 60 marks each 120 marks
Includes Paper-1-General Surgery (Section 1) Orthopaedics (Section 2) and Paper II- Surgical Gastroenterology, Oncology (Section 1), Urology, Paediatrics, Neuro- Surgery, Plastic surgery, Trauma, Anaesthesia, Dentistry (Section 2).
Oral (Viva) Interpretation of Investigative data 20 marks
Clinical 100 marks
Internal assessment (Theory -30; Practical-30) 60 marks
Total 300 marks

Paper 1 of Surgery shall have one section in Orthopaedics. The questions on Orthopaedic Surgery be set and assessed by examiners who are teachers in the Orthopaedic surgery.

**Pass:** In each of the subjects a candidate must obtain 50% in aggregate with a minimum of 50% in Theory including orals and minimum of 50% in practicals/clinicals

**SURGERY & ITS ALLIED SPECIALITIES THEORY PAPER**

**Paper I** – 60 marks

**Time: 3 hours**

**Section A** (General Surgery, Burns, Shock, Blood Transfusion, Breast & Endocrines)

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

**Section B** (Orthopaedics)

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

**Paper II** – 60 marks

**Time: 3 hours**
**Section A** (Surgical Gastroenterology, Oncology)

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

**Section B** (Urology, Paediatrics, Neuro-Surgery, Plastic surgery, Trauma, Anaesthesia, Dentistry)

Q1. Long Answer Question 10 Marks (must be structured)

Q2. Short Answer Questions: 4 Short Notes of 5 marks each (20 marks)

**Note:** Long Answer Questions (LAQ) should be from must know area. Total number of short notes is 16 of which 4 or 5 should be from desirable to know areas.

**MODEL QUESTION PAPERS:**

**SURGERY PAPER I**

**ANSWER ALL QUESTIONS**

Each Section to be answered in separate Answer Book

Illustrate your answer with suitable diagrams

**Time: 3 hours**

**Maximum marks: 60**

**SECTION A**

General Surgery (Burns, Shock, Blood transfusion, Breast and Endocrine)

1. A 60 year old woman is brought to casualty with near total burns sustained in a closed room.  

   a) How will you evaluate this patient to assess extent and depth of burns? 
   b) What other complication she can have due to the nature of the injury? 
   c) Outline the management of the case. Discuss how you will evaluate the fluid requirement.

   (3+2+5=10)

2. Write short note:  

   (4 x 5 = 20)

   a. Blood stained discharge from the nipple
   b. Triage
   c. Glasgow coma scale
   d. Prophylactic antibiotics in surgery

**SECTION B**

(Orthopaedic Surgery)

3. A 50 year old woman reports to the outpatient department with back pain of 3 months duration. She was found to be having a kyphotic deformity with local tenderness at D10 level. She had loss of weight and weakness in the lower limbs with spaticity.  

   (2+2+3+3=10)
a) What is the most probable diagnosis.
b) Give the differential diagnosis.
c) Give three relevant investigative procedures.
d) Outline the management and prognosis.

4. Write short notes on: (4x5 = 20)
   a. Barlow’s test
   b. Soft tissue pathology in congenital talipes equinovarus
   c. Management of fracture of the scaphoid
   d. Radiological signs of scurvy

SURGERY PAPER II

ANSWER ALL QUESTIONS
Each Section to be answered in separate Answer Book
Illustrate your answer with suitable diagrams

Time: 3 hours Maximum marks: 60

SECTION A
(Surgical Gastroenterology, Oncology)

1. A young man comes to the hospital with sudden onset abdominal pain and vomiting, abdominal distention and obstipation of 2 days duration. On examination he has diffuse tenderness and abdominal guarding and rigidity. (3+2+5=10)
   a) Discuss briefly the differential diagnosis.
   b) What investigations would help in diagnosis?
   c) Outline the principles of management.

2. Write short notes on: (4 x 5 = 20)
   a) OschnerSherren regime for appendicitis
   b) Courvoiser's law
   c) Staging of Hodgkin’s disease
   d) Indications for splenectomy

SECTION B
Allied specialities (Urology, Paediatric Surgery, Neurosurgery, Plastic Surgery, Trauma, CTVS, Anaesthesiology, Dentistry)

3. A 60 year old man presents with passage of fresh, painless blood stained urine for the past five days. (3+3+4=10)
   a) Enumerate the possible causes.
   b) What investigations would be required in this patient to determine the cause?
   c) Outline the principles of management.

4 Write short notes on: (4 x 5 = 20)
   a) Flail Chest.
   b) Meconium ileus.
   c) Epidural anesthesia.
d) Lucid interval in head trauma.

**CLINICAL / PRACTICAL**

(One Long case and three short cases including orthopaedics) 100 marks

(40+20+20+20)

**ORTHOpedics**
ORTHOPEDICS

OBJECTIVES

Knowledge

The student should be able to:

1. Explain the principles of recognition of bone injuries and dislocation.
2. Apply suitable methods to detect and manage common infections of bones and joints.
3. Identify congenital, skeletal anomalies and their referral for appropriate correction or rehabilitation. Recognize metabolic bone diseases as seen in this country.
4. Explain etiogenesis, manifestations, diagnosis of neoplasm affecting bones.

Skills

At the end of the course, the student should be able to:

1. Detect sprains and deliver first aid measures for common fractures and sprains and manage uncomplicated fractures of clavicle, Colles's, forearm, phallanges etc.
2. Techniques of splinting, plaster, immobilization etc.
3. Management of common bone infections, learn indications for sequestration, amputations and corrective measures for bone deformities.
4. Aspects of rehabilitation for Polio, Cerebral Palsy and Amputation.

Application

Be able to perform certain orthopedic skills, provide sound advise of skeletal and related conditions at primary or secondary health care level.

Integration

Integration with anatomy, surgery, pathology, radiology and Forensic Medicine be done.
RADIODIAGNOSIS & RADIOTHERAPY
RADIODIAGNOSIS

GOAL
The broad goal of teaching the undergraduate medical students in the field of Radio-diagnosis should be aimed at making the students realize the basic need of various radio-diagnostic tools in medical practice. They should be aware of the techniques required to be undertaken in different situations for the diagnosis of various ailments as well as during prognostic estimations.

OBJECTIVES
Knowledge
The student should be able to:
1. Understand basics of X-ray production, its uses and hazards.
2. Appreciate and diagnose changes in bones - like fractures, infections, tumours and metabolic bone diseases.
3. Identify and diagnose various radiological changes in disease conditions of chest and mediastinum, skeletal system, G.I. Tract, Hepatobiliary system and G.U. system.
4. Learn about various imaging techniques, including isotopes C.T., Ultrasound, M.R.I. and D.S.A.

Skills
At the end of the course, the student should be able to:
1. Use basic protective techniques during various imaging procedures.
2. Interpret common X-ray, radio-diagnostic techniques in various community situations.
3. Advise appropriate diagnostic procedures in specialized circumstances to appropriate specialists.

RADIOTHERAPY

GOAL
The broad goal of teaching the undergraduate medical students in the field of Radiotherapy is to make the students understand the magnitude of the ever increasing cancer problem in the country. The students must be made aware about steps required for the prevention and possible cure of this dreaded condition.

OBJECTIVES
Knowledge
The student should be able to:
1. Identify symptoms and signs of various cancers and their steps of investigations and management.
2. Explain the effect of radiation therapy on human beings and the basic principles involved in it.
3. Know about radio-active isotopes and their physical properties.
4. Be aware of the advances made in radiotherapy in cancer management and knowledge of various radio therapeutic equipment while treating a patient.

Skills
A the end of the course, the student should be able to:
1. Take a detailed clinical history of the case suspected of having a malignant disease.
2. Assist various specialists in administration of anticancer drugs and in application and use of various radiotherapeutic equipment, while treating a patient.
DENTISTRY

GOAL

The goal of the training is to provide an understanding of common dental pathologies and to equip medical students to effectively diagnose common dental diseases and refer them to concerned dental specialist at the earliest to avoid any treatment delay.

OBJECTIVES

1. To introduce common dental infectious diseases to Medical Students.

2. To teach the diagnosis of common maxillofacial fractures and refer them to maxillofacial surgeons.

3. To teach the role of emergency medical officers in performing emergency maxillofacial trauma care.

4. To introduce to common Odontogenic Jaw pathologies.

5. To diagnose oral premalignant lesions.

6. Introduction to management of oral cancer.

COURSE CONTENTS

OBSTETRICS AND GYNAECOLOGY
OBSTETRICS AND GYNAECOLOGY

GOAL

The broad goal of the teaching of undergraduate students in Obstetrics and Gynaecology is that he/she should acquire understanding of anatomy, physiology and pathophysiology of the reproductive system and gain the ability to optimally manage common conditions affecting it.

OBJECTIVES

1. Appreciate the socio-cultural, economic and demographic factors that influence the practice of Obstetrics & Gynaecology.

2. Appreciate the principles of reproductive anatomy and physiology.

3. Understand the preconceptual, antenatal, intranatal and postnatal factors that affect the mother and foetus.

4. Recognise the changes and adaptation that occur in the mother during pregnancy, labour and puerperium.

5. Impart antenatal care, detect deviations from normal pregnancy and refer risk cases appropriately.

6. Know the management of normal labour, be aware of the factors that deviate labour from its normal course and refer such cases appropriately.

7. Institute primary treatment in Obstetric and Gynaecological emergencies.

8. Resuscitate and take adequate care of the new born.

9. Assist couples with infertility and those requiring contraception.

10. Know the normal menstrual cycle, aetiopathology and management of menstrual abnormalities.

11. Know about the benign and malignant tumours of the genital tract and appreciate the need for screening and prevention.

12. Recognise the importance of infections and other diseases of the genital tract.

13. Know about the displacements of genital tract and injuries.
14. Understand the implications of medico-legal and ethical issues concerning the speciality.

15. Acquire communication, decision making and managerial skills.

16. Acquire skills to perform – Obstetrical & Gynaecological examinations and certain minor investigations and therapeutic operative procedures.

**COURSE CONTENTS**

**MUST KNOW CATEGORY**

**OBSTETRICS**

**Anatomy of female reproductive tract:**

Anatomy of internal and external reproductive organs including their relation ship to other pelvic organs. Applied anatomy as related to Obstetrics and Gynaecology.

**Physiology of conception:**

Gametogenesis, Ovulation, menstruation, fertilisation and implantation. Spermatogenesis. Normal semen parameters

**Development of fetus and Placenta:**

Basic embryology. Development and structure and functions of placenta. Teratogenic agents and drugs to be avoided / contraindicated in early pregnancy

**Diagnosis of Pregnancy:**

Clinical symptoms and signs of early pregnancy. Dating in early pregnancy including USG dating various tests to diagnose pregnancy. Congenital anomalies that can be diagnosed in early pregnancy.

**Maternal Changes during Pregnancy:**

The physiological changes in Blood, Cardiovascular, Respiratory, urinary tract and gastrointestinal tract.

**Antenatal care:**

**Complications of Early pregnancy:**
Various types of abortions, definitions, causes, investigations and their management. Diagnosis of Ectopic pregnancy and management. Modern management of ectopic pregnancy.

**Hyperemesis Gravidarum:**
Aetiopathogenesis, investigations and management

**Antepartum haemorrhage:**
Classification, clinical features, differential diagnosis, investigation including USG features, management and complications. Diagnosis of DIC.

**Malpresentations and malpositions and CPD:**

**Multiple pregnancy:**
Causes, diagnosis, differential diagnosis, complications in pregnancy and labour and management

**Hydramnios and oligohydramnios:**
Causes, diagnosis, investigations and management

**Hypertensive disorders of Pregnancy:**
Classification, diagnosis, investigations and management of Gestational hypertension, pre-eclampsia, and Eclampsia and complications. Prevention of pre-eclampsia and Eclampsia.

**Anaemia during pregnancy:**
Causes, classification of various types of anaemias and their diagnosis, Nutritional anaemias and their management. Prevention of anaemia.

**Diabetes mellitus and pregnancy:**
Classification, Diagnosis, Screening for GDM and management of Diabetes during pregnancy and labour. Management of neonate of diabetic mother.

**Heart disease and pregnancy:**
Classification, evaluation, complications and management during pregnancy and labour Contraception.

**Intrauterine- Growth restriction and Intra uterine death:**
Causes, diagnosis and management.

**Infections during pregnancy:**
UTI. Malaria, Syphilis, Tuberculosis, Hepatitis, HIV, H1N1 and TORCH infections during pregnancy and their management.

Preterm labour and Post-dated pregnancy:

Rh Negative Pregnancy:

Diagnosis, evaluation and management. Prevention of Rh Isoimmunisation. Management of Haemolytic disease of New born

Normal labour:

Physiology of initiation of labour (not induction). Physiology, mechanism and conduct of normal labour. Monitoring in various stages and abnormal labour or dysfunctional labour. Diagnosis and management of fetal distress. Pain relief during labour. Active management of third stage of labour and complications of IIIrd stage.

Postpartum haemorrhage:

Definition, types, Diagnosis and management of PPH. Retained placenta, Manual removal of placenta.

Induction/Augmentation of labour:

Operative Obstetrics:

Post-caesarean pregnancy:

Evaluation of a case of post-caesarean pregnancy and management. Monitoring of a case of post-caesarean in labour and complications of VBAC Indications for repeat Caesarean section and complications of Caesarean at repeat CS.

Puerperium:

Contraception:

Cafetaria approach, various methods of contraception, advantages and sideeffects, and failure rates, Selection of patients and counseling. IUCD Insertion and removal. Emergency contraception.
Medical termination of Pregnancy:

Perinatal and Maternal mortality in INDIA:

Definition of PNMR & MMR. causes and prevention of Perinatal and maternal mortality.

GYNAECOLOGY

Vaginal discharge:

Physiological and pathological causes of vaginal discharge. Clinical characteristics, Investigations for diagnosis, predisposing conditions and management.

Amenorrhoea:
Classification of Primary and Secondary amenorrhoea, investigations and principles of management.

Abnormal uterine bleeding:

Normal menstrual pattern and physiology of menstrual cycle. Various bleeding patterns like menorrhagia, metrorrhagia and polymenorrhoea - Causes, investigations, diagnosis of AUB. Definition, Etiology and classification of DUB and its management. Transvaginal sonography.

Infertility:

Definition of Infertility and sterility. Causes and investigation of a couple with infertility; semen analysis Causes of anovulation and induction of ovulation, Tests for ovulation & tubal patency, IUI.

Pelvic organ prolapse:

Classification, causes, diagnosis, investigations and management in relation to age and parity. Preventive aspects of pelvic organ prolapsed.

Urinary Incontinence:

Classification and differential diagnosis. Investigations and management of Stress urinary incontinence.

Benign tumours of internal reproductive organs:

Uterine anomalies:

Classification and diagnosis and reproductive outcome and indications for surgical management.

Pelvic Inflammatory disease:

**Genital tract injuries and Genital fistulae:**

Post-coital injuries and operative injuries especially to urinary tract. Causes, clinical features and diagnosis of genital fistulae.

**Pre-malignant lesions and Malignancies of genital tract:**

Etiology and Pathology, Classification, diagnosis of pre-malignant and malignant lesions of Cervix, uterus and ovary. Screening for carcinoma cervix. Clinical and Surgicopathological Staging and principles of management of cervical, endometrial cancer and ovarian cancer. Screening for Breast and endometrial and ovarian malignancies. Chemotherapy and Radiotherapy of Carcinoma cervix including adverse effects. Chemotherapy of Ovarian cancer.

**Problems of Adolescence and menopause:**

Menopausal symptoms and management of menopause, HRT. Causes and investigations of post-menopausal bleeding.

**Operative Gynaecology:**

Indications, technique and complications of Dilatation and Curettage and Fractional curettage, Vaginal hysterectomy, Ward Mayo’s operation, Manchester repair, Abdominal Hysterectomy, Ovariomy and diagnostic laparoscopy. Staging laparotomy for endometrial and ovarian malignancy Diagnosis and principles of management of post-operative complications. Indications and techniques of Colposcopy, Hysteroscopy and operative laparoscopy.

**DESIRABLE TO KNOW CATEGORY**

**OBSTETRICS**

**Antenatal care:**

Diagnosis and management of fetal congenital anomalies.

**Hyperemesis Gravidarum:**

Unusual complications of hyperemesis and management.

**Antepartum haemorrhage:**

Management of Complications like DIC.

**Malpresentations and malpositions and CPD:**

Management of face, brow and transverse lie.

**Multiple pregnancy:**

Mechanism of twin to twin transfusion and management. Management of single fetal demise.
Hydramnios and oligohydramnios:
Recent trends in management.

Hypertensive disorders of Pregnancy:

Anaemia during pregnancy:
Management of Non-nutritional anaemias in pregnancy.

Diabetes mellitus and pregnancy:
Complications of diabetes and their management.

Heart disease and pregnancy:
Surgical management during pregnancy.

Intrauterine- Growth restriction and Intra uterine death:
Recent advances in management.

Rh Negative Pregnancy:
In-utero management of Rh iso-immunised fetus.

Postpartum haemorrhage:
Management of Inversion of uterus.

Operative Obstetrics:
Destructive operations in Obstetrics.

Contraception:
Recent advancesvasectomy//NSV.

Medical termination of Pregnancy:
Management of complications of various methods of MTP.

Perinatal and Maternal mortality in INDIA:
PNMR & MMR in our Institute and Puducherry.

GYNAECOLOGY

Amenorrhoea:
Details of management.
Abnormal uterine bleeding:
Sonosalpingography ablative procedure.

Infertility:
Management of tubal factors of infertility including re-canalisation, Counseling for ART. ART and their success.

Pelvic organ prolapse:
Nulliparous prolapsed.

Urinary Incontinence:
Surgical therapy of Stress urinary incontinence.

Benign tumours of internal reproductive organs:
Recent advances in management.

Uterine anomalies:
Surgical procedures for specific anomalies.

Genital tract injuries and Genital fistulae:
Genital fistulae management.

Pre-malignant lesions and Malignancies of genital tract:
Vulva, vaginal cancers.

Problems of Adolescence and menopause:
Precocious causes and investigation. Management of Precocious puberty.

Operative Gynaecology:
Detailed management of various post-operative complications. Tubal recanalisation.

SKILLS

Must acquire - Communication skills:
History taking skills- Present and past Obstetric history. History of Medical and Surgical disorders if any. Family history and treatment history. Counseling for contraception, Breast feeding.

Must acquire - Clinical skills:
General Physical examination and Systemic Examination. Obstetric examination: Speculum and vaginal examination, Diagnosis of early pregnancy, Measurement of symphysio fundal height, Plotting Gravidogram to monitor fetal growth, Obstetric palpation to know the lie, Presentation and position of fetus, Pelvic assessment to know grossly contracted pelvis . Diagnosis and Monitoring Labour: Appreciate Normal Uterine contractions by palpation. Fetal heart normality. Cervical dilatation. Station of presenting part. Plotting a Partogram and recognition of deviations from normal. Catherisation of bladder during labour. Technique of ARM. Conduct of normal labour including active management of III stage. Technique of
Episiotomy and its suturing. Recognition of Perineal tears. Care of Normal New-born and resuscitation of asphyxiated New-born

Desirable to acquire Clinical skills:
Techniques of Assisted breech delivery and breech extraction
Vacuum application and extraction
Out-let forceps application, repair of cervical tears, vaginal packing

Must acquire Gynecological examination skills:

Desirable to acquire Gynecological examination skills:
Culdocentesis, Instrumental evacuation for incomplete abortion, Blood transfusion, Adult resuscitation.

Must know Managerial skills:
Transport of patient with convulsions, and Shock. How to co-ordinate with team members.

Desirable to know Managerial skills:
Organisation of antenatal clinics and arrangement for cervical cancer screening at camps.

OBSTETRICS AND GYNAECOLOGY- DISTRIBUTION OF MARKS

Theory-Two papers of 40 marks each

Includes Paper I- Obstetrics including social obstetrics and Paper II - Gynaecology, Family Welfare and Demography (Shall contain one question on basic sciences and allied subjects) 80 marks

Oral (Viva) including record of delivery cases (20+10) 30 marks
Clinical - 50 marks
Internal assessment (Theory-20; Practical-20) 40 marks
Total 200 marks

Pass: In each of the subjects, a candidate must obtain 50 % in aggregate with a minimum of 50% in Theory including oral and minimum of 50% in Practicals.

OBSTETRICS AND GYNAECOLOGY - THEORY PAPER

Paper I – 40 marks (Obstetrics including social obstetrics)

Time: 2 hours

Q1. Long Answer Question - 10 Marks (must be structured)
Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

Paper II – 40 marks (Gynaecology, Family Welfare and Demography)
(Shall contain one question on basic sciences and allied subjects)

**Time: 2 hours**

Q1. Long Answer Question - 10 Marks

Q2. Short Answer Questions: 6 Short Notes of 5 marks each (30 marks)

**Note:** Long Answer Questions (LAQ) should be from must know area. Total number of SAQs is 12 of which 2 or 3 should be from desirable to know areas.

In Obstetrics paper, one SAQ should be from social obstetrics and in Gynaecology paper, one SAQ should be from family welfare (including contraception) and demography.

**MODEL QUESTION PAPERS:**

**OBSTETRICS AND GYNAECOLOGY PAPER I**  
(Obstetrics including Social obstetrics)

**ANSWER ALL QUESTIONS**  
Illustrate your answer with suitable diagrams

**Time: 2 hours**  
Maximum marks: 40

1. P1 G2 with 5 months amenorrhea comes for antenatal check-up. Examination reveals that the uterus is 36 weeks size. (2+4+4=10)
   
a. Enumerate the differential diagnoses.
   b. Mention the complications of multiple gestation.
   c. How will you manage twin pregnancy in active labour with first twin in vertex presentation?

2. Write short notes on: (6x5=30)
   
a) Cardiovascular changes during pregnancy.
   b) Management of adherent placenta.
   c) Partogram.
   d) Maternal mortality in India.
   e) Iron therapy in anaemia in pregnancy.
   f) Prevention of PIH

**OBSTETRICS AND GYNAECOLOGY PAPER II**  
(Gynaecology, Family welfare and Demography)

**ANSWER ALL QUESTIONS**  
Illustrate your answer with suitable diagrams

**Time: 2 hours**  
Maximum marks: 40

1. A 40 year old nulliparous woman complains of metrorrhagia. There is a suprapubic mass of 14 weeks per abdomen. (3+2+5= 10)
   
a. Enumerate the differential diagnosis.
   b. What are the types of endometrium that can be seen in anovulatory DUB?
   c. If investigations reveal endometriosis in this woman, how will you manage?
2. Write shorts notes on: (6x5 = 30)
   
a) Semen analysis
b) Pap smear
c) Staging laparotomy in ovarian cancer
d) Non contraceptive benefits of OC pills
e) Medical management of PCOS in unmarried woman
f) Nulliparous prolapse

PRACTICAL MARKS - 50 marks

1 Long case in Obstetrics – 25 Marks
1 Long case in Gynaecology – 25 Marks

ANAESTHESIOLOGY
ANAESTHESIOLOGY

OBJECTIVE

Objective of the undergraduate curriculum in Anaesthesiology is to impart the knowledge of basic concepts of anesthesia, airway management, and science of resuscitation which will be useful for the students in various areas of medical practice. The student, therefore, should be taught to observe and study the physiological changes which take place in the anesthetized and also to recognize, respond and manage in the event of any deviation. Emphasis should also be laid on good preoperative preparation and optimization of patient’s co morbid conditions and to introduce principles of patient care in the operating room and in the recovery unit.

COURSE CONTENT

MUST KNOW CATEGORY

DESIRABLE TO KNOW CATEGORY

PRACTICAL SKILLS

CHAPTER – V

14. INTERNSHIP

(1) GENERAL

In order to make trained work force available, it may be considered as a phase of training wherein the graduate is expected to conduct actual practice under the supervision of a trained doctor. The learning methods and modalities have to be done during the MBBS course itself with larger number of hands on session, practice on simulators including zones models.

(2) SPECIFIC OBJECTIVES

At the end of the internship training, the student shall be able to:

i) Diagnose clinical common disease conditions encountered in practice and make timely decision for referral to higher level;

ii) Use discreetly the essential drugs, infusions, blood or its substitutes and laboratory services.

iii) Manage all type of emergencies-medical, surgical obstetric, neonatal and paediatric, by rendering first level care;

iv) Demonstrate skills in monitoring of the National Health Programme and schemes, oriented to provide preventive and promotive health care services to the community;

v) Develop leadership qualities to function effectively as a leader of the health team organised to deliver the health and family welfare service in existing socio-economic, political and cultural environment;

vi) Render services to chronically sick and disabled (both physical and mental) and to communicate effectively with patient and the community.

(3) Time allocation to each discipline is approximate and shall be guided more specifically by the actual experience obtained. Thus a student serving in a district or taluk hospital emergency room may well accumulate skill in surgery, orthopaedics, medicine, obstetrics and Gynaecology and Paediatrics during even a single night on duty. Responsible authorities from the medical college shall adjust the intern experience to maximize intern’s opportunities to practice skills in patient care in rough approximation of the time allocation suggested.
### (4) INTERNSHIP - TIME DISTRIBUTION

#### COMPULSORY

</tbody>
</table>

Subjects for Elective posting will be as follows:

i) Dermatology and Sexually Transmitted Diseases.
ii) Tuberculosis and Respiratory Diseases.
iii) Radio-Diagnosis
iv) Forensic Medicine
v) Blood Bank
vi) Psychiatry

**Note:** Structure internship with college assessment at the end of the internship.

### (5) OTHER DETAILS

i) All parts of the internship shall be done as far as possible in institutions of India. In case of any difficulties, the matter may be referred to the Medical Council of India to be considered on individual merit.

ii) Every candidate will be required after passing the final MBBS examination to undergo compulsory rotational internship to the satisfaction of the College authorities and University concerned for a period of 12 months so as to be eligible for the award of the degree of Bachelor of Medicine and Bachelor of Surgery (MBBS) and full registration.

iii) The University shall issue a provisional MBBS pass certificate on passing the final examination.
iv) The State Medical Council will grant provisional registration to the candidate on production of the provisional MBBS pass certificate. The provisional registration will be for a period of one year. In the event of the shortage or unsatisfactory work, the period of provisional registration and the compulsory rotating internship may be suitably extended by the appropriate authorities.

v) The intern shall be entrusted with clinical responsibilities under direct supervision of senior medical officer. They shall not be working independently.

vi) Interns will not issue a medical certificate or a death certificate or a medicolegal document under their signature.

vii) In recognition of the importance of hands-on experience, full responsibility for patient care and skill acquisition, internship should be increasingly scheduled to utilize clinical facilities available in District Hospital, Taluka Hospital, Community Health Centre and Primary Health Centre, in addition to Teaching Hospital. A critical element of internship will be the acquisition of specific experiences and skill as listed in major areas:

(6) ASSESSMENT OF INTERNSHIP

i) The intern shall maintain a record of work which is to be verified and certified by the medical officer under whom he works. Apart from scrutiny of the record of work, assessment and evaluation of training shall be undertaken by an objective approach using situation tests in knowledge, skills and attitude during and at the end of the training. Based on the record of work and date of evaluation, the Dean/Principal shall issue certificate of satisfactory completion of training, following which the University shall award the MBBS degree or declare him eligible for it.

ii) Satisfactory completion shall be determined on the basis of the following:

1) Proficiency of knowledge required for each case

   SCORE 0-5

2) The competency in skills expected to manage each case

   a) Competency for performance of self performance,
   b) of having assisted in procedures,
   c) of having observed.

   SCORE 0-5

3) Responsibility, punctuality, work up of case, involvement in treatment, follow-up reports.

   SCORE 0-5
4) Capacity to work in a team (Behaviour with colleagues, nursing staff and relationship with paramedicals).  
SCORE 0-5

5) Initiative, participation in discussions, research aptitude.  
SCORE 0-5

Poor / Fair / below average / average / above average / excellent  
0  1  2  3  4  5

A Score of less than 3 in any of above items will represent unsatisfactory completion of internship.

(7) Full registration shall only be given by the State Medical Council/Medical Council of India on the award of the MBBS degree by the university or it declaration that the candidate is eligible for it.

(8) Some guidelines in the implementation of the training programme are given below.

(9) INTERNSHIP - DISCIPLINE RELATED

(i) Community Medicine

Interns shall acquire skills to deal effectively with an individual and the community in the context of primary health care. This is to be achieved by hands on experience in the district hospital and primary health Centre. The details are as under: -

1) Community Health Centre/District Hospital/Attachment to General Practitioner:

1) During this period of internship an intern must acquire

(a) clinical competence for diagnosis of common ailments, use of bedside investigation and primary care techniques;

(b) gain information on ‘Essential drugs’ and their usage;

(c) recognise medical emergencies, resuscitate and institute initial treatment and refer to suitable institution.

2) Undergo specific Government of India/Ministry of Health and Family Welfare approved training using Government of India prescribed training manual for Medical Officers in all National Health Programmes (e.g. child survival and safe motherhood-EPI, CDD, ARI, FP, ANC, safe delivery, Tuberculosis, Leprosy and others as recommended by Ministry of Health and Family Welfare:-

161
(a) gain full expertise in immunization against infectious disease;
(b) participate in programmes in prevention and control of locally prevalent endemic diseases including nutritional disorders;
(c) learn skills first hand in family welfare planning procedures;
(d) learn the management of National Health Programmes;

3) Be capable of conducting a survey and employ its findings as a measure towards arriving at a community diagnosis.

4) (a) conduct programmes on health education,
   (b) gain capabilities to use Audiovisual aids,
   (c) acquire capability of utilization of scientific information for promotion of community health.

5) Be capable of establishing linkages with other agencies as water supply, food distribution and other environmental/social agencies.

6) Acquire quality of being professional with dedication, resourcefulness and leadership.

7) Acquire managerial skills, delegation of duties to paramedical staff and other health professionals.

II) TALUQA HOSPITAL

Besides clinical skill, in evaluation of patient in the environment and initiation of primary care, an Intern shall:

1) effective participate with other members of the health team with qualities of leadership;
2) make a community diagnosis in specific situations such as epidemics and institute relevant control measures for communicable diseases;
3) develop capability for analysis of hospital based morbidity and mortality statistics.
4) Use essential drugs in the community with the awareness of availability, cost and side effects;

5) Provide health education to an individual/community on:

   a) tuberculosis;
   b) small family, spacing, use of appropriate contraceptives;
   c) applied nutrition and care of mothers and children;
   d) immunization;
e) participation in school health programme.

III) PRIMARY HEALTH CENTRE

1) Initiate or participate in family composite health care (birth to death), Inventory of events;
2) Participation in all of the modules on field practice for community health e.g. safe motherhood, nutrition surveillance and rehabilitation, diarrhea disorders etc. 
3) Acquire competence in diagnosis and management of common ailments e.g. malaria, tuberculosis, enteric fever, congestive heart failure, hepatitis, meningitis acute renal failure etc.;
4) Acquire proficiency for Family Welfare Programmes (ante natal care, normal delivery, contraception care etc.)
5) A village attachment of atleast one week to understand issues of community health along with exposure to village health centres, ASHA Sub Centres should be added.

(ii) GENERAL MEDICINE

I) Interns shall acquire following training during their term.

1) acquire competence for clinical diagnosis based on history physical examination and relevant laboratory investigation and institute appropriate line of management;
2) this would include diseases common in tropics (parasitic, bacterial or viral infections, nutritional disorders, including dehydration and electrolyte disturbances) and system illnesses.

II) The intern shall have assisted as a care team in intensive care of cardiac, respirator, hepatic, neurological and metabolic emergencies.

III) The intern shall be able to conduct the following laboratory investigations:

a) Blood: (Routine haematology smear and blood groups);
b) Urine: (Routine chemical and microscopic);
c) Stool: (for ova/cyst and occult blood);
d) Sputum and throat swab for gram stain or acid fast stain and 
e) Cerebro Spinal Fluid (CSF) for smear.

IV) Conduct following diagnostic procedures:

a) Urethral catheterisation;
Proctoscopy;
Ophthalmoscopy/Otoscopy;
Indirect laryngoscopy;
b) therapeutic procedures;
   Insertion of Ryles Tube;
   Pleural, ascetic tap, Cerebro Spinal Fluid (CSF) tap, installing or air way tube, Oxygen administration etc.

V) Biopsy Procedures:
Liver, Kidney, Skin, Nerve, Lymph node, and muscle biopsy, Bone marrow aspiration, Biopsy of Malignant lesions on surface, Nasal/nerve/skin smear for leprosy.

VI) (a) Familiarity with usage of life saving procedures:
   including use of aspirator, respirator and defibrillator,
   (b) Competence in interpretation of different monitoring devices such as cardiac monitor, blood gas analysis etc.

VII) Participate as a team member in total health care of an individual including appropriate follow-up and social rehabilitation.

VIII) Other competencies as indicated in general objectives.

(iii) PAEDIATRICS

The details of the skills that an intern shall acquire during his/her tenure in the department of Paediatrics are as follows:

The intern shall be able to:

1) diagnose and manage common childhood disorders including neonatal disorders and acute emergencies( enquiry from parents of sick children), examining sick child making a record of information;

2) carry out activities related to patient care such as laboratory work, investigative procedures and use of special equipments. The details are given as under:

(a) diagnostic techniques: blood (including from femoral vein and umbilical cord), obscess, cerebrospinal fluid, urine, pleura and peritoneum and common tissue biopsy techniques;

(b) techniques related to patient care: immunization, perfusion techniques, feeding procedures, tuberculin testing & breast feeding counselling;

(c) use of equipment: vital monitoring, temperature monitoring, resuscitation at birth and care of children receiving intensive care;

(3) screening of newborn babies and those with objective risk factors for any anomalies and steps for prevention in future;
(4) plan in collaboration with parents and individual, collective surveillance of growth and development of new born babies, infants and children so that he/she is able to:

(a) recognise growth abnormalities;
(b) recognise anomalies of psychomotor development;
(c) detect congenital abnormalities;

(5) assess nutritional and dietary status of infants and children and organise prevention, detection and follow up of deficiency disorders both at individual and community level such as:

(a) protein-energy malnutrition
(b) deficiencies of vitamins especially A, B, C and D;
(c) Iron deficiency;

(6) institute early management of common childhood disorders with special reference to Paediatrics dosage and oral rehydration therapy.

(7) Participate actively in public health programme oriented towards children in the community.

(iv) GENERAL SURGERY

An intern is expected to acquire following skills during his/her posting:

A) Diagnose with reasonable accuracy all surgical illnesses including emergencies.

B)(a) resuscitate a critically injured patient and a severe burns patient;
(b) control surface bleeding and manage open wound;

C)(a) monitor patients of head, spine, chest abdominal and pelvic injury;
(b) institute first-line management of acute abdomen;

D)(a) perform venesection;
(b) perform tracheostomy and endotracheal intubation;
(c) catheterise patients with acute retention or perform trocar cystostomy,
(d) drain superficial abscesses,
(e) suturing of wound,
(f) perform circumcision,
(g) biopsy of surface tumours,
(h) Perform vasectomy

(v) CASUALTY

The intern after training in Casualty must be able to:

(1) identify acute emergencies in various disciplines of medical practice;
(2) manage acute anaphylactic shock;
(3) manage peripheral-vascular failure and shock;
(4) manage acute pulmonary oedema and Left Ventricular failure (LVF);
(5) undertake emergency management of drowning poisonings and seizures;
(6) undertake emergency management of bronchial asthma and status asthmaticus;
(7) undertake emergency management of hyperpyrexia;
(8) undertake emergency management of comatose patients regarding airways positioning, prevention of aspiration and injuries;
(9) assess and administer emergency management of burns;
(10) assess and do emergency management of various trauma victims;
(11) identify medicolegal cases and learn filling up forms as well as complete other medicolegal formalities in cases of injury, poisoning, sexual offenses, intoxication and other unnatural conditions.

(vi) OBSTETRICS AND GYNAECOLOGY

Technical skills that interns are expected to learn:

(1) diagnosis of early pregnancy and provision of ante-natal care;

(2) diagnosis of pathology of pregnancy related to

   (a) abortions;
   (b) ectopic pregnancy;
   (c) tumours complicating pregnancy;
   (d) acute abdomen in early pregnancy;
   (e) hyperemesis gravidarum;

(3) detection of high risk pregnancy cases and suitable advise e.g. PIH, hydramanios, antepartum haemorrhage, multiple pregnancies, abnormal presentations and intra-uterine growth retardation;

(4) antenatal pelvic assessment and detection of cephalopelvic disproportion;

(5) induction of labour and amniotomy under supervision;

(6) management of normal labour, detection of abnormalities, post-partum hemorrhage and repair of perennial tears;

(7) assist in forceps delivery;

(8) assist in caesarean section and postoperative care thereof;

(9) detection and management of abnormalities of lactation;

(10) perform non-stress test during pregnancy;

(11) per speculum, per vaginum and per rectal examination for detection
of common congenital, inflammatory, neoplastic and traumatic conditions of vulva, vagina, uterus and ovaries;

(12) medicolegal examination in Gynecology and obstetrics.

(13) To perform the following procedures:

(a) dilation and curettage and fractional curettage;
(b) endometrial biopsy;
(c) endometrial aspiration;
(d) pap smear collection;
(e) Intra Uterine Contraceptive Device (IUCD) insertion;
(f) Minilap ligation;
(g) Urethral catheterisation;
(h) Suture removal in postoperative cases;
(i) Cervical punch biopsy;

(14) to assist in major abdominal and vaginal surgery cases in Obstetrics and Gynaecology.

(15) to assist in follow-up postoperative cases of obstetrics and gynaecology such as:

(a) Colposcopy;

(b) Second trimester Medical Termination of Pregnancy (MTP) procedures e.g. Emcredyl Prostaglandin instillations;

(16) To evaluate and prescribe oral contraceptive.

(vii) OTO RHINO LARYNGOLOGY (ENT)

(1) Interns shall acquire ability for a comprehensive diagnosis of common Ear, Nose and Throat (ENT) diseases including the emergencies and malignant neoplasma of the head and neck;

(2) he/she shall acquire skills in the use of head mirror, otoscope and indirect laryngoscopy and first line of management of common Ear Nose and Throat (ENT) problems;

(3) he/she shall be able to carry out minor surgical procedures such as:

(a) earsyringing antrum puncture and packing of the nose for epistaxis,

(b) nasal douching and packing of the external canal,

(c) Remove the foreign bodies from the nose and ear

(d) Observed or assisted in various endoscopiec procedures and trachesotomy;
(4) an item shall have participated as a team member in the community diagnosis e.g. Chronic Suppurative Otitis Media (CSOM) and be aware of national programme on prevention of deafness

(5) he/she shall possess knowledge of various ENT rehabilitative programmes.

(viii) OPHTHALMOLOGY

(1) he/she shall be able to diagnose common ophthalmological conditions such as:- Trauma, Acute conjunctivitis, allergic conjunctivitis, xerosis, corneal ulcer, myopia, hypermetropia, cataract, glaucoma, ocular injury and sudden loss of vision.
(2) he/she shall be able to diagnose ocular changes in common systemic disorders;
(3) he/she shall be able to perform investigative procedures such as: Tonometry, syringing, direct ophthalmoscopy, and fluorescein staining of cornea.
(4) he/she shall have carried out or assisted the following procedures:
   (a) Ocular bandaging;
   (b) Removal of concretions;
   (c) Epilation
   (d) Corneal foreign body removal;
   (e) Chalazion removal;
   (f) Glaucoma surgery - assisted
   (g) Enucleation of eye in cadaver - assisted
(5) he/she shall have full knowledge on available methods for rehabilitation of the blind.

(ix) ORTHOPAEDICS

GOAL

The aim of teaching the undergraduate student in Orthopaedics and Rehabilitation is to impart such knowledge and skills that may enable him to diagnose and treat common ailments. He shall have ability to diagnose and suspect presence of fracture, dislocation, actual osteomyelitis, acute poliomyelitis and common congenital deformities such as congenital talipes equinovarus (CTEV) and dislocation of hip (CDH).

(A) THERAPEUTIC - An intern must know:

(a) Splinting (plaster slab) for the purpose of emergency splintage, definitive splintage and post operative splintage and application of Thomas splint;
(b) Manual reduction of common fractures - phalangeal, metacarpal, metatarsal and Colles’s fracture;
(c) Manual reduction of common dislocations - internphalangeal, metacarpophalangeal, elbow an shoulder dislocations;
(d) Plaster cast application for undisplaced fractures of arm, fore arm, leg and ankle;
(e) Emergency care of a multiple injury patient;
(f) Precautions about transport and bed care of spinal cord injury patients.

(B) **Skill that an intern should be able to perform under supervision:**

1. Advise about prognosis of poliomyelitis, cerebral palsy, CTEV and CDH;
2. Advise about rehabilitation of amputees and mutilating traumatic and leprosy deformities of hand;

(C) **An intern must have observed or preferably assisted at the following operations:**

1. Drainage for acute osteomyelitis;
2. Sequestrectomy in chronic osteomyelitis;
3. Application of external fixation;
4. Internal fixation of fractures of long bones.

(x) **DERMATOLOGY AND SEXUALLY TRANSMITTED DISEASES**

An intern must be able to:
1. Conduct proper clinical examination; elicit and interpret physical findings, and diagnose common disorders and emergencies.
2. Perform simple, routine investigative procedures for making bedside diagnosis, specially the examination of scraping for fungus, preparation of slit smears and staining for AFB for leprosy patient and for STD cases;
3. Take a skin biopsy for diagnostic purpose;
4. Manage common diseases recognizing the need for referral for specialized care in case of inappropriateness of therapeutic response.

(xi) **PSYCHIATRY**

An Intern must be able to:

1. Diagnose and manage common psychiatric disorders;
2. Identify and manage psychological reaction and psychiatric disorders in medical and surgical patients in clinical practice and community setting.

(xii) **TUBERCULOSIS AND RESPIRATORY DISEASES**

The student must acquire the following skills during internship:

1. Interview the patient, elicit relevant and correct information and describe the history in chronological order;
2. Conduct clinical examination, elicit and interpret clinical findings and diagnose common respiratory disorders and emergencies;
3. Perform simple, routine investigative and office procedures required for making the bed side diagnosis, especially sputum collection and examination for etiologic organisms especially Acid Fast Bacilli (AFB), interpretation of the chest x-ray and respiratory function test;
4. Interpret and manage various blood gases and PH abnormalities in various respiratory diseases.
5. Manage common diseases recognizing need for referral for specialized care, in case of inappropriateness of therapeutic response;
6. Assist in the performance of simple procedures like pleural aspiration, intercostal tube drainage
7. Communicate with and educate TB patients and their families about the nature of illness, drugs and duration of treatment and close contact screening.

(xiii) ANAESTHESIA

After the internship in the department of Anesthesiology an intern shall acquire knowledge, skill and attitude to:

(1) perform pre-anaesthetic check up and prescribe pre-anaesthetic medications;
(2) perform venepuncture and set up intravenous drip;
(3) perform laryngoscopy and endotracheal intubation;
(4) perform lumbar puncture, spinal anaesthesia and simple nerve blocks;
(5) conduct simple general asaesthetic procedures under supervision;
(6) monitor patients during anaesthesia and post operative period;
(7) recognise and manage problems associated with emergency anaesthesia;
(8) maintain anaesthetic records;
(9) recognise and treat complication in post operative period;
(10) perform cardio-pulmonary brain resuscitation (C.P.B.R.) correctly, including recognition of cardiac arrest.

(xiv) RADIO-DIAGNOSIS

An intern after training must be able to identify and diagnose:

(1) all aspects of ‘Emergency Room’ Radiology like

   (a) all acute abdominal conditions;
   (b) all acute traumatic conditions with emphasis on head injuries;
   (c) differentiation between Medical and surgical radiological emergencies;

(2) Basic hazards and precautions in Radio-diagnostic practices.

(xv) PHYSICAL MEDICINE AND REHABILITATION

An intern is expected to acquire the following skills during his/her internship

(1) competence for clinical diagnosis based on details history an assessment of common disabling conditions like poliomyelitis, cerebral palsy, hemiplegia, paraplegia, amputations etc;
(2) participation as a team member in total rehabilitation including appropriate follow up of common disabling conditions;
(3) principles and procedures of fabrication and repair of artificial limbs and appliances;
(4) various therapeutic modalities;
(5) use of self help devices and splints and mobility aids;

(6) familiarity with accessibility problems and home making for disabled;

(7) ability to demonstrate simple exercise therapy in common conditions like prevention of deformity in polio, stump exercise in an amputee etc.;

(xvi) FORENSIC MEDICINE AND TOXICOLOGY

The intern is to be posted in the casualty department of the hospital while attached under Forensic Medicine Department with the following objectives:

(1) to identify medicolegal problem in a hospital and general practice;
(2) to identify and learn medicolegal responsibilities of a medical man in various hospital situations;
(3) to be able to diagnose and learn management of basic poisoning conditions in the community;
(4) to learn how to handle cases of sexual assault;
(5) to be able to prepare medico-legal reports in various medicolegal situations;
(6) to learn various medicolegal post-mortem procedures and formalities during its performance by police.
APPENDICES
APPENDIX A

A comprehensive list of skills recommended as desirable for Bachelor of Medicine and Bachelor of Surgery (MBBS) Graduate:

I. Clinical Evaluation:

(a) To be able to take a proper and detailed history.
(b) To perform a complete and thorough physical examination and elicit clinical signs.
(c) To be able to properly use the stethoscope, Blood Pressure, Apparatus Auroscope, Thermometer, Nasal Speculum, Tongue Depressor, Weighing Scales, Vaginal Speculum etc.: 
(d) To be able to perform internal examination-Per Rectum (PR), Per Vaginum (PV) etc.
(e) To arrive at a proper provisional clinical diagnosis.

II. Bed side Diagnostic Tests:

(a) To do and interpret Haemoglobin (HB), Total Count (TC), Erythrocytic Sedimentation Rate (ESR), Blood smear for parasites, Urine examination /albumin /sugar /ketones /microscopic.
(b) Stool exam for ova and cysts;
(c) Gram, staining and Siehl-Nielsen staining for AFB;
(d) To do skin smear for lepra bacilli
(e) To do and examine a wet film vaginal smear for Trichomonas
(f) To do a skin scraping and Potassium Hydroxide (KOH) stain for fungus infections;
(g) To perform and read Montoux Test.

III. Ability to Carry Out Procedures:

(a) To conduct CPR (Cardiopulmonary resuscitation) and First aid in newborns, children and adults.
(b) To give Subcutaneous (SC) /Intramuscular(IM) /Intravenous(IV) injections and start Intravenous (IV) infusions.
(c) To pass a Nasogastric tube and give gastric leavage.
(d) To administer oxygen-by masic/eatheter
(e) To administer enema
(f) To pass a ruinary catheter- male and female
(g) To insert flatus tube
(h) To do pleural tap, Ascitic tap & lumbar puncture
(i) Insert intercostal tube to relieve tension pneumothorax
(j) To control external Haemorrhage.

IV. Anaesthetic Procedure:

(a) Administer local anaesthesia and nerve block
(b) Be able to secure airway potency, administer Oxygen by Ambu bag.

V. Surgical Procedures:
(a) To apply splints, bandages and Plaster of Paris (POP) slabs;
(b) To do incision and drainage of abscesses;
(c) To perform the management and suturing of superficial wounds;
(d) To carry on minor surgical procedures, e.g. excision of small cysts and nodules, circumcision, reduction of paraphimosis, debridement of wounds etc.
(e) To perform vasectomy;
(f) To manage anal fissures and give injection for piles.

VI. Mechanical Procedures:

(a) To perform thorough antenatal examination and identify high risk pregnancies.
(b) To conduct a normal delivery;
(c) To apply low forceps and perform and suture episiotomies;
(d) To insert and remove IUD’s and to perform tubectomy

VII. Paediatrics:

(a) To assess new borns and recognise abnormalities and I.U. retardation
(b) To perform Immunization;
(c) To teach infant feeding to mothers;
(d) To monitor growth by the use of ‘road to health chart’ and to recognize development retardation;
(e) To assess dehydration and prepare and administer Oral Rehydration Therapy (ORT)
(f) To recognize ARI clinically;

VIII. ENT Procedures:

(a) To be able to remove foreign bodies;
(b) To perform nasal packing for epistaxis;
(c) To perform trachesotomy

IX. Ophthalmic Procedures:

(a) To evert eye-lids;
(b) To perform epilation of eye-lashes;
(c) To perform nasolacrimal duct syringing for patency

X. Dental Procedures:

To perform dental extraction.

XI. Community Healthy:

(a) To be able to supervise and motivate, community and para-professionals for corporate efforts for the health care;
(b) To be able to carry on managerial responsibilities, e.g.Management of stores, indenting and stock keeping and accounting
(c) Planning and management of health camps;
(d) Implementation of national health programmes;
(e) To effect proper sanitation measures in the community, e.g.disposal of infected garbage, chlorination of drinking water;
(f) To identify and institute and institute control measures for epidemics including its proper data collecting and reporting.
XII. Forensic Medicine Including Toxicology:

(a) To be able to carry on proper medicolegal examination and documentation of injury and age reports.
(b) To be able to conduct examination for sexual offences and intoxication;
(c) To be able to preserve relevant ancillary material for medico legal examination;
(d) To be able to identify important post-mortem findings in common un-natural deaths.

XII. Management of Emergency:

(a) To manage acute anaphylactic shock;
(b) To manage peripheral vascular failure and shock;
(c) To manage acute pulmonary oedema and LVF;
(d) Emergency management of drowning, poisoning and seizures
(e) Emergency management of bronchial asthma and status asthmaticus;
(f) Emergency management of hyperpyrexia;
(g) Emergency management of comatose patients regarding airways, positioning prevention of aspiration and injuries
(h) Assess and administer emergency management of burns.
APPENDIX B

Curriculum in ‘Family Welfare’ for the Bachelor of Medicine and Bachelor of Surgery (MBBS) Course.

The Curriculum may be considered under various pre and para clinical heads and the following details are worked out for each of the disciplines.

1. Anatomy:

   (1) Gross and microscopic anatomy of the male and female generative organs.
   (2) The menstrual cycle.
   (3) Spermatogenesis and Oogenesis
   (4) Fertilization of the ovum.
   (5) Tissue and organ changes in the mother in pregnancy.
   (6) Embryology and Organogenesis.
   (7) Principles of Genetics.
   (8) Applied anatomy of mechanical methods of preventing conception.
       a) in female - chemical contraceptive, pessaries, Intra-Uterine Contraceptive Device (IUCD), tubectomy etc.
       b) in male - condom, vasectomy etc.

2. Physiology:

   (1) Physiology of reproduction.
   (2) Endocrines and regulations of reproduction in the female
   (3) Endocrines and physiology of reproduction in the male.
   (4) Physiology and Endocrinology of pregnancy, parturition and lactation.
   (5) Nutritional needs of mother and child during pregnancy and lactation.
   (6) The safe period-rhythm method of contraceptions.
   (7) Principles of use of oral contraceptive.

3. Pharmacology:

   (1) Mode of action and administration of:
       (a) Chemical contraceptive
       (b) Oral contraceptive
   (2) Contra indication for administration of contraceptives.
   (3) Toxic effects of contraceptives.

4. Community Medicine:

   (1) The need for family welfare Planning.
   (2) Organization of Family Welfare Planning service.
   (3) Health Education in relating to Family Welfare Planning.
   (4) Nutrition.
   (5) Psychological needs of the mother, the child and the family.
   (6) Demography and vital Statistics.

5. Obstetrics & Gynaecology:
(1) Contraceptive methods in male/female

(a) Mechanical
   A. Pessaries, Intra Uterine Contraceptive Device (IUCD), Condoms
   B. Tubectomy and vasectomy

(b) Chemical
(c) Oral
(d) Rhythm Method

(2) Demonstrations of use of Pessaries, IUCD, Condoms and technique of Tubectomy.

(3) Advice on family planning to be imparted to parents.

6. Paediatrics:

(1) Problems of child health in relation to large family.
   (a) Organization of pediatric services.
   (b) Nutritional problems of mother and child.
   (c) Childhood diseases due to overcrowding.

7. Surgery:

   Technique of Vasectomy.

   I. Compulsory Internship

   Placement of a student for in-service training in a family welfare planning clinic for a period of at least one month.

   II. Examination

   It is necessary that questions on family welfare planning be introduced in the theory, practical and oral examination throughout the MBBS course.

   The curriculum content has been indicated subjectwise. However, it would be more advantageous to the student for purpose of integrated learning and for understanding of the subject if family welfare planning instruction with the curriculum content indicated could be divided into two parts.

   Part-I

   Anatomy, Physiology, Biochemistry and Pharmacology

   There shall be close integration in the teaching of these subjects. It is suggested that during the early para-clinical years, two to three weeks may be set apart for instruction in Family Welfare Planning relating to these subjects; so that the student gets an overall understanding of the principles and practice of “Family Planning” within the limited time available for covering all the subjects of the medical course. The method suggested would save time and repetition of essential facts.

   Part-II
This includes the later para-clinical and clinical courses. The practical aspects of Family Welfare Planning methods should be emphasized. The program of instruction shall be supervised by the Department of Obstetrics and Gynaecology. The department of Community Medicine Internal Medicine, Psychiatry, Paediatrics and Surgery must be closely associated in imparting instruction relating to the problems arising for want of family welfare planning and the advantages to society and the individual which will be gained by adopting the measures suggested.

Seminars:

The medical colleges shall organise occasional seminars in which staff from all departments and the in-service trainees shall participate.
APPENDIX C

Prescribed Teaching Hours and Suggested Model Time Tables

Following minimum teaching hours are prescribed in various disciplines:

A. Pre-Clinical Subjects: (Phase-1-First and Second Semester)

- Anatomy 650 Hrs.
- Physiology 480 Hrs.
- Biochemistry 240 Hrs.
- Community Medicine 60 Hrs.

B. Para-Clinical Subjects: (Phase-II 3rd to 5th Semester)

- Pathology 300 Hrs.
- Pharmacology 300 Hrs.
- Microbiology 250 Hrs.
- Community Medicine 200 Hrs. (including 8 weeks postings of 3 hrs each)
- Forensic Medicine 100 Hrs.

Teaching of para-clinical subjects shall be 4 hrs per day in 3rd Hrs Semester and 3 Hrs per day in 4th and 5th Semesters (See attached Time Table)

C. Clinical Subjects

1. Clinical postings as per chart attached.

2. Theory lectures, demonstrations and Seminars etc. in addition to clinical postings as under. The clinical lectures to be held from 4th Semester onwards (See attached Time Table)

- Gen-Medicine 300 Hours
- Paediatrics 100 Hours
- T.B. and Chest 20 Hours
- Psychiatry 20 Hours
- Skin and STD 30 Hours
- Community Medicine 50 Hours
- Anaesthesia 20 Hours
- Gen. Surgery 300 Hours
- Orthopedics 100 Hours
- Ophthalmology 100 Hours
- ENT 70 Hours
- Radiology 20 Hours
- Dentistry 10 Hours
- Obst & Gynae. 300 Hours inclusive

Note

This period of training is minimum suggested. Adjustments where required depending on availability of time be made.

This period of training does not include university examination period. Extra time available be devoted to other Sub-specialities.
During semesters 3 to 9 following clinical postings for each student, of 3 hrs. duration is suggested for various departments after introductory course in Clinical Methods in Medicine and surgery of 2 weeks each for the whole class.

Clinical methods in Medicine and Surgery for whole class will be for 2 weeks each respectively at the start of 3rd semester. This posting will include training in Radiodiagnosis & Radiotherapy where existent.

This posting includes exposure to Rehabilitation Physiotherapy

This posting includes exposure to laboratory medicine and infectious diseases.

This includes exposure to dressing and Anaesthesia.

This include maternity training and Family medicine and the 3rd semester posting shall be in Family Welfare Planning.
