What do you mean by Hospital?

Explain about specialized hospitals.

Explain about the departments in the hospitals.

State the patient review instrument instructions.

Explain about General hospital.

What do you mean by Hospital?

Answer any PIVF questions.

PART A — (6 x 6 = 36 marks)

Time : Three hours

Maximum : 100 marks

(2013 - 2014 Batch onwards)

MAINTENANCE
HOSPITAL ARCHITECTURE, PLANNING AND
Hospital Management
Third Semester

DECEMBER 2014/January 2015
M.B.A. DEGREE EXAMINATION
MBM 3002
7. Write about the content of room details.

8. State the types of hospitals.

   PART B — (5 × 10 = 50 marks)

   Answer any FIVE questions.

9. Write in detail about the planning of intensive care unit and obstetrical unit in hospitals.

10. Discuss in detail about special functioning hospitals.

11. Write in detail about the Planning and designing guidelines for hospitals.

12. State the process of planning in hospital maintenance.

13. State the Standards for hospital in-patient prescription chart design.

14. Analyze the factors influencing hospital utilization.

15. Discuss in detail about the hospital administration.

16. Discuss about electrical safety in hospitals.

Case study: Missouri City truck driver,

Northway. Younes, a Missouri City truck driver,

Questions:

(a) (b)
and its doctors' reluctance to see patients after hours, was well known to state and federal authorities before and after Young died. The Chronicle examined lawsuits from patients and their families; reports of investigations into violations of state and federal regulations; and interviewed patients' relatives, regulatory officials and lawyers familiar with the hospital. Then in February 2002, state inspectors learned that Vista had no physicians on call to treat people who came into its emergency room or Vista's own post-surgery patients who got into trouble during the night. Four out of nine doctors contacted from a list provided by Vista stated they were unaware of the on-call list and didn't know their names were on it. What happened to Nathan Young fit the pattern of problems that inspectors documented. But the Young had little reason to be wary of Vista. There were no easily accessible public records of past complaints or problems. "We didn't know we could go to a different hospital," said his wife, Gwen Young. "You're just going in blind and hope for the best." Around 3 the morning after his surgery, Young phoned his wife, telling her he was having trouble breathing and his neck was swelling. The trouble had started around 11 p.m.,

according to interviews and court documents, but his licensed vocational nurse, who had one year of training, seemed unconcerned. Nurses did not try to contact a respiratory specialist or an on-call emergency-room physician, according to depositions of nurses on duty that Saturday and Sunday. One of Young's doctors, a Vista anesthesiologist, eventually returned a call nearly three hours after he was initially paged, according to nurses' depositions, and prescribed an anti-anxiety drug over the phone. The combination of drugs -- Young was already on an antihistamine and a narcotic pain reliever -- was known to suppress respiration in some patients, according to the depositions. The anesthesiologist did not come in to examine Young, nurses said.

When Gwen Young arrived at the hospital, she found her husband sitting on the side of his bed, his bandages dark with blood. Nurses assured her that if he could talk, he could breathe. Around 7 a.m., Nathan Young appeared in the hallway outside a nurses' shift-change meeting, blood dripping from the IV tube he'd yanked from his arm. He fell to the floor, no longer breathing. A temporary nurse working at Vista for the first time later testified that a Vista nurse burst
