PART A — (6 x 6 = 36 marks)

(2012-13 Batch onwards)

International Business Environment

M.B.A. Degree Examination, June 2014

MBB 3001
7. What is FDI? Explain its advantages.

8. What is capital flow?

   PART B — (5 × 10 = 50 marks)

   Answer any FIVE questions.

   All questions carry equal marks.

10. Discuss the functions of world bank for developing the under developed countries.

11. What are the functions of IMF?

12. Explain the advantages of MNC's for Home Country.

13. Discuss the nature of International Business Environment.

15. Explain the various theories of foreign investment.

16. Elucidate in detail about the legal environment.
Consider investing in the country. Recent years have seen the economy expand at a rate of 7% per annum. In terms of GDP, agriculture, fishing, mining, and forestry contribute significantly. The country is rich in minerals, with large deposits of gold, copper, and silver. The country's population is predominantly rural, with a significant proportion living in the Andes.

1. Case Study:

Peru is located on the west coast of South America. It is the third-largest nation in the continent.

PART C 

Questions:

1. Which are some current issues facing Peru?
2. What is the climate for doing business in Peru today?
3. What types of political risks does this raise?
4. What types of international and protective and defensive techniques can the bank use?
5. Would the bank be better off negotiating the loan in New York or in Lima? Why?
6. Describe them.
One of these potential investors is a large New York based bank that is considering a $25 million loan to the owner of a Peruvian fishing fleet. The owner wants to refurbish the fleet and add one more ship.

During the 1970's the Peruvian government nationalized a number of industries and factories and began running them for the profit of the state. In most cases, these state-run ventures became disasters. In the late 1970's the fishing fleet owner was given back his ships and allowed to operate his business as before. Since then, he has managed to remain profitable, but the biggest problem is that his ships are getting old and he needs an influx of capital to make repairs and add new technology. As he explained it to the New York banker: "Fishing is no longer just an art. There is a great deal of technology involved. And to keep costs low and be competitive on the world market, you have to have the latest equipment for both locating as well as catching and then loading and unloading the fish".

Having reviewed the fleet owner's operation, the large multinational bank believes that the loan is justified. The financial institution is concerned, however, that the Peruvian government might step in during the next couple of years and again take over the business. If this were to happen, it might take an additional decade for the loan to be repaid. If the government were to allow the fleet owner to operate the fleet the way he has over the last decade, the loan could be repaid within seven years.

Right now, the bank is deciding on the specific terms of the agreement. Once these have been worked out, either a loan officer will fly down to Lima and close to the deal or the owner will be asked to come to New York for the signing. Whichever approach is used, the bank realizes that final adjustments in the agreement will have to be made on the spot. Therefore, if the bank sends a representative to Lima, the individual will have to have the authority to commit the bank to specific terms. These final matters should be worked out within the next ten days.
